REACH Informing more effective humanitarian action

Introduction

This pro le provides a multisector overview of conditions in the Rohingya refugee camps in Cox's Bazar District, Bangladesh. Data for the ndings were collected in 29 camps from 7-27 March 2018 (Round 3a) and 15-20 April 2018 (Round 3b) as part of the Settlement and Protection Pro ling exercise funded by UNHCR and implemented by REACH. These pro les speci cally look at conditions for those families who have arrived since 25 August 2017. Key indicators provide contextual and operational ndings at the household level. The full dataset, with indicators presented by theme is available on the UNHCR website and REACH Resource Centre.

Methodology

Primary data were collected through household surveys of families who have arrived since 25 August 2017, randomly sampled from the RRRC-UNHCR Family Counting dataset. The sampling was designed so ndings are statistically representative and can be generalised at the site level with at least a 95% con dence level and a 10% margin of error. Data for the demographics and the People With Speci c Needs (PWSN) section are taken from the Family Counting dataset provided by UNHCR and presented to provide household data for evidence-based programming. Additionally, all shelter footprint data, which was used to calculate shelter and camp population density, was provided by OpenStreetMap (OSM).
