Confidentiality: interview locations are aggregated to sampling clusters and smoothed over 10 km; no household locations are shown.
Density: kernel density of MSNA Round 1 interviews by sampling cluster (quartic kernel, 10 km radius, 500 m cells), in interviews per 100 km². Same colour classes for every state. Blank: no interviews within about 10 km. Near state borders the surface can include interviews from just across the border.
Accessibility: partner-reported ward accessibility at the close of Round 1 (30 Sep 2026). Some interviews were collected in areas that were later reported inaccessible, but are still included within the overall sample. *A GRID3 ward counts as reported accessible when at least half of its area was reported accessible.
