Camp 20 Ukhiya, Cox's Bazar, Bangladesh

July 2018 and January 2019 comparison

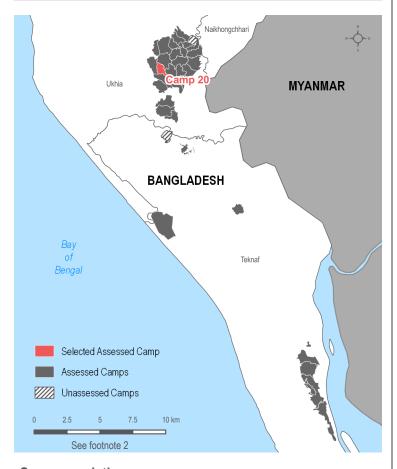

Background and Methodology

An estimated 738,000 Rohingya refugees have fled violence in Myanmar's Rakhine state since August 25, 20171. Most of the refugees rely on humanitarian assistance, having left with few possessions and exhausted their financial resources on the journey. The cyclone and monsoon seasons, stretching from May to October, further threatened the living conditions of the vast majority of refugees who are living in makeshift shelters and settlements highly vulnerable to floods and landsides.

To understand the evolving priority needs of the refugees, and to understand change over time, this Multi-Sector Needs Assessment (MSNA), coordinated by the United Nations High Commissioner for Refugees (UNHCR) and with technical support from REACH, was conducted in 33 refugee sites using a household survey methodology. It is a follow up assessment to the baseline MSNA conducted in July 2018.

Results of this MSNA are generalizable to the camp level with 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 20 where 105 households were surveyed between 8 and 26 January 2019. Support for questionnaire translation and enumerator language training was provided by Translators Without Borders.

January 2019 data is presented in red, and July 2018 data is presented in beige.

Camp population:

Families¹ 1.770 Individuals¹

†∤**†** Demographics³

Average age of 31.9 respondent

55% of respondents were female

Average household size

50% of refugees are under 18

Composition of surveyed households

of households with at least one child under 18 vears old

of households with at least one child under 5 vears old

30% of heads of households were female

of households with at least one person with a disability or chronic illness

of households with pregnant or lactating women
