## **Background and methodology**

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 910,000.1 The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 5 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidencebased monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The fifth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 25 June - 5 August, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 1E, where 114 households were surveyed.

Where relevent, findings are compared to those of SPP Round 4 which took place from 25 November - 17 December, 2018.2 July 2019 data is presented in dark blue, and December 2018 data is presented in

Camp 2W Ukhiya, Cox's Bazar, Bangladesh

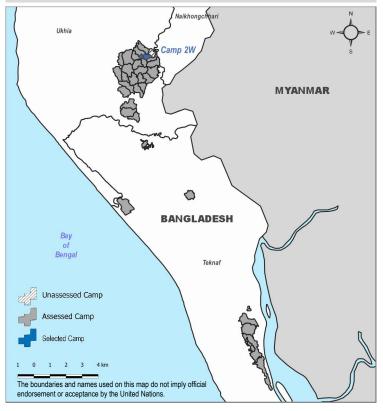

July 2019 and December 2018 comparison

## **Background and methodology**

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 910,000.1 The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 5 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidencebased monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The fifth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 25 June - 5 August, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 2W, where 117 households were surveyed.

Where relevent, findings are compared to those of SPP Round 4 which took place from 25 November - 17 December, 2018.2 July 2019 data is presented in dark blue, and December 2018 data is presented in

Camp 4 Ukhiya, Cox's Bazar, Bangladesh

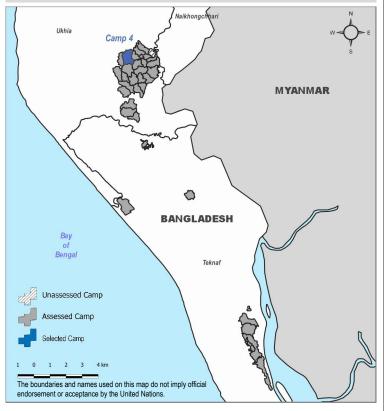

July 2019 and December 2018 comparison

### **Background and methodology**

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 910,000.1 The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 5 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidencebased monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The fifth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 25 June - 5 August, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 4, where 109 households were surveyed.

Where relevent, findings are compared to those of SPP Round 4 which took place from 25 November - 17 December, 2018.2 July 2019 data is presented in dark blue, and December 2018 data is presented in

Camp 6 Ukhiya, Cox's Bazar, Bangladesh

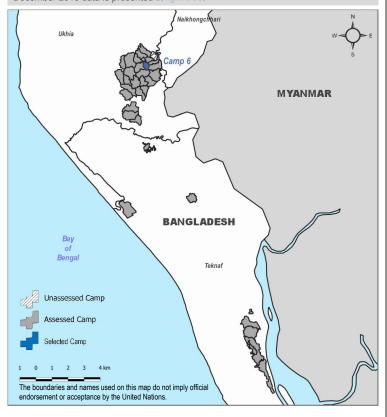

July 2019 and December 2018 comparison

### **Background and methodology**

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 910,000.1 The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 5 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidencebased monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The fifth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 25 June - 5 August, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 6, where 103 households were surveyed.

Where relevent, findings are compared to those of SPP Round 4 which took place from 25 November - 17 December, 2018.2 July 2019 data is presented in dark blue, and December 2018 data is presented in

Camp 8E Ukhiya, Cox's Bazar, Bangladesh

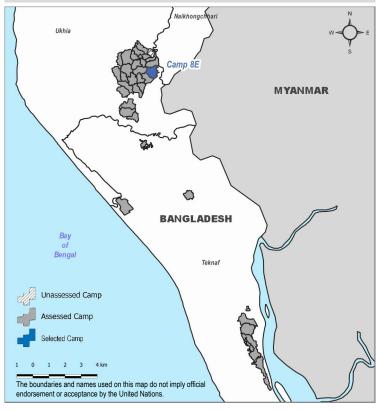

July 2019 and December 2018 comparison

### **Background and methodology**

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 910,000.1 The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 5 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidencebased monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The fifth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 25 June - 5 August, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 8E, where 114 households were surveyed.

Where relevent, findings are compared to those of SPP Round 4 which took place from 25 November - 17 December, 2018.2 July 2019 data is presented in dark blue, and December 2018 data is presented in

## **Key Camp Information**

**July 2019** 

## **Settlement and Protection Profiling**

Camp 9 Ukhiya, Cox's Bazar, Bangladesh

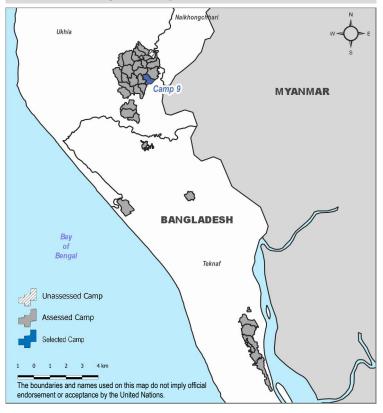

July 2019 and December 2018 comparison

#### **Background and methodology**

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 910,000.1 The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 5 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidencebased monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The fifth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 25 June - 5 August, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 9, where 104 households were surveyed.

Where relevent, findings are compared to those of SPP Round 4 which took place from 25 November - 17 December, 2018.2 July 2019 data is presented in dark blue, and December 2018 data is presented in

Camp 12 Ukhiya, Cox's Bazar, Bangladesh

July 2019 and December 2018 comparison

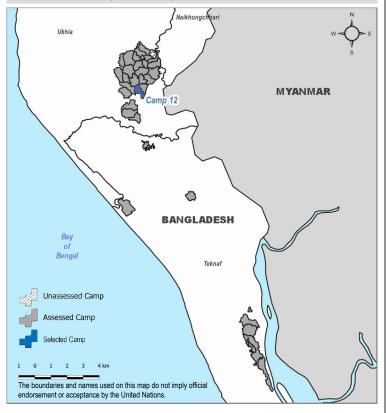

Round 5 **July 2019** 

#### **Background and methodology**

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 910,000.1 The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 5 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidencebased monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The fifth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 25 June - 5 August, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 12, where 103 households were surveyed.

Where relevent, findings are compared to those of SPP Round 4 which took place from 25 November - 17 December, 2018.2 July 2019 data is presented in dark blue, and December 2018 data is presented in

#### **Background and methodology**

Since August 2017, an estimated 741,000 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 910,000.1 The majority are reliant on overstretched humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH, in partnership with UNHCR, continued Round 5 of the Settlement and Protection Profiling (SPP) Assessment in order to support evidencebased monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The fifth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 25 June - 5 August, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 14, where 94 households were surveyed.

Where relevent, findings are compared to those of SPP Round 4 which took place from 25 November - 17 December, 2018.2 July 2019 data is presented in dark blue, and December 2018 data is presented in

## **Key Camp Information**

Camp Management	RRRC
Site Management Support	IOM / ACF
Population (individuals) <sup>1</sup>	31,357
Population (families) <sup>1</sup>	6,904
Camp Area	0.86 km <sup>2</sup>

**Population density** 36.596 individuals/km<sup>2</sup>

#### Tim **Demographics**

Household composition by gender and age:

56% of individuals are under 18

77% of individuals are women and children

There is an average of **5.5** individuals reported per household

of households reported the presence of members with 11% disabilities4

#### From UNHCR Key Demographic Indicators dataset<sup>1</sup>

% of families with Persons with Specific Needs (PSN) by need3

https://data2.unhcr.org/en/documents/details/70841

2. UNHCR, Bangladesh: UNHCR Camp Settlement and Protection Profiling - Round 4, December 2018. data2.unhcr.org/en/documents/details/68127

3. For definitions of key terms relating to special needs and disability, refer to UNHCR "Guidance on the Use of Standardized Specific Needs Codes" https://bit.ly/2GnJE0h.

4. For this round of data collection, disability was measured at the household level using the Washington Group Short Set of questions on disability. According to this methodology, 'disability' is determined as anyone in the household having at least 'a lot of difficulty' following six domains: walking, seeing, hearing, cognition, self-care, and communication.

Three most frequently reported perceived risks faced by individuals in the camp<sup>6,7</sup>:

July 20	19	1	N	len		Dec 2018	
38%	No issues	No issues			Fear of kidnapping		
37%	Fear of kidnapp	ing	2	Violend	y <b>43</b> %		
36%	Natural hazaro	ls	3	N	41%		
		1	Women

	Natural hazards	41%	2	43% Natural hazards			
	Fear of trafficking	31%	8	28%	No issues		

Three most frequently reported preferred sources of support for various forms of security incidents9:

	Involving self or family, with persons inside the camps		Involving self or family, with persons outside the camp		Witness to security incident within the camps	
	July 2019	Dec 2018	July 2019	Dec 2018	July 2019	Dec 2018
0	Mahji	Mahji	Mahji	Mahji	Mahji	Mahji
2	Camp-in- Charge	Army	Camp-in- Charge	Army	Camp-in- Charge	Army
3	Army	Camp-in- Charge	Army	Camp-in- Charge	Army	Camp-in- Charge

of households would report if they witnessed an incident of 85% child abuse, neglect, or exploitation8

of households reported being satisfied or very satisfied with the community watch groups in their area of the camp<sup>8,10,11</sup>

of households reported feeling safe in their shelter8

- 6. Respondents could give up to three answers
- 7. These results are based on the respondent's subjective perception of risks in the camp, and not the actual number of security incidents.
- 8. Round 5 data only. These indicators were not included in SPP Round 4
- 9. Respondents could give multiple answers.
- 10. This number is a combination of households that reported 'satisfied' and 'very satisfied'.
- 11. This question was asked to a subset of 69 households that reported a community watch group in their area.
- 12. This question was asked to a subset of 66 households that contained children under 5.
- 13. Findings on specific issues are reported as a percentage among households who report any issues accessing
- 14. In July 2019, this question was asked separately for female and male household members. In December 2018, it was asked once for the household in general.
