

# Joint Multi-Cluster Needs Assessment: Ceel Afweyn District Profile

Sanaag Region, Somalia

July 2017

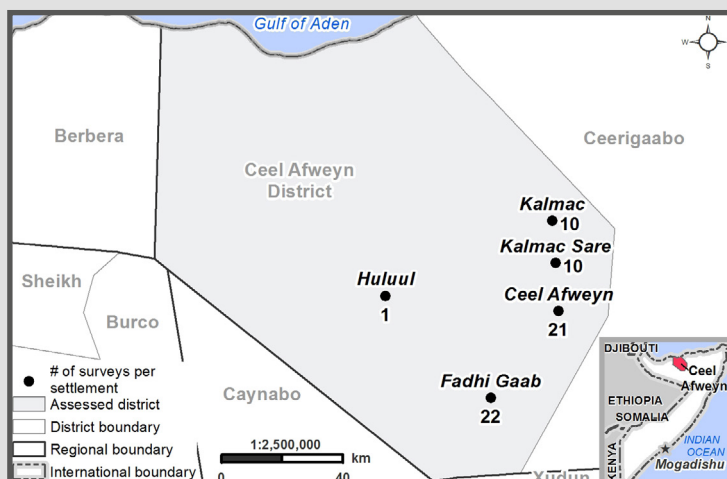

## Background

The ongoing drought has contributed to a rapid deterioration of the humanitarian context in Somalia, with a predicted high risk of famine in 2017. In support of the humanitarian planning response, the Clusters and the Assessment Working Group developed the Joint Multi-Cluster Needs Assessment (JMCNA) with the support of REACH in order to assess needs and access to basic services in Somalia.

The Somalia population was sampled for statistical representativeness at the district level with a confidence level of 90% and a margin of error of +/- 10%, employing a cluster sampling approach using the Population Proportional to Size method with replacement. Data collection was conducted by AAHI, ACF, ACTED, ADESO, Aid Vision, CARE, DBG, DRC, Galmudug MoH, HINNA, INTERSOS, IOM, NRC, PAH, REACH, SADO, SCI, SHARDO and SI.

This factsheet presents an analysis of data collected in Ceel Afweyn District between 18 and 24 July 2017 as part of the JMCNA. In total, 97 households were surveyed across Ceel Afweyn District.

## Survey Locations:

## Demographics

### Household composition, by gender and age:

**11%** of households reported that they are not from the community they currently reside in.

## Food Security

### Food Consumption Scores (FCS) of households:

### Coping Strategies Index (CSI) scores of households<sup>3</sup>:

### Reported challenges experienced by households when attempting to access food over the past three months<sup>2</sup>:

**3.2** days on average that households' food stocks will reportedly last.

## Vulnerabilities

### % of households reporting the following members:

## Priority Needs

### Top 3 priority needs reported by households<sup>1</sup>:

## Nutrition

### % of children under 5 in assessed households, by Mid-Upper Arm Circumference (MUAC) score:

### % of households reported access to the following nutrition services<sup>2</sup>:

**16%** of households reported increased difficulty in accessing nutrition services compared to more than 3 months ago.

# Joint Multi-Cluster Needs Assessment: Ceel Afweyn District Profile

## Livelihoods

Top 3 primary support sources reported for the past year:

- |                                  |     |
|----------------------------------|-----|
| 1. Day labour                    | 32% |
