

Ar-Ragga governorate, Syria August 2022

Background and Methodology

Tel Elsamen / Daham is informal internally displaced person (IDP) camp in Ar-Ragga governorate. This profile provides an overview of humanitarian conditions in Tel Elsamen / Daham camp. Primary data was collected between 17 and 28 August 2022 through a representative household survey. The assessment included 399 households who were randomly sampled to achieve a 95% confidence level and 10% margin of error based on population figures provided by camp management. Key informant (KI) interviews with camp managers, held in August 2022, were used to support and triangulate the household survey findings.

Camp Overview 1

Demographics

1 Men	•		Women 🛊
1%	1	60+	2%

★ SHELTER AND NON-FOOD ITEMS (NFIs)

Average number of people estimated per household8: 6 Average number of shelters estimated per household: 1 ↑ Average number of people estimated per shelter: 5 Estimated occupation rate of the shelters in the camp: 100%

Shelter adequacy

Reported shelter adequacy issues:8

Present needs: Additional_tents Timber

Expected future needs: Kitchen_utensils Detergent for dishes Sources_of_light

Top three most commonly reported shelter item needs:6

0% of respondents reported they had access to a communal or private kitchen, while 100% of households used improvised cooking facilities.

Households reported hazards in their block such as uncovered pits (9%) and electricity hazards (34%).

Tent status

In assessed households, 33% of tents were in new condition.⁷

Flood susceptibility

Camp management reported that 0% of tents are prone to flooding, and that Yes_all drainage channels between shelters were available.

Sources of light

Most commonly reported sources of light inside shelters:4

Light powered by public electricity network	100%	
Light powered by solar panels	9%	I
Candles	0%	

FCS measures households' current food consumption status based on the number of days per week a household is able to eat items from nine standard food groups, weighted for their nutritional value.
 Households were asked to report the number of days per week nutrient-rich food groups were consumed, from which nutrient consumption frequencies were derived. World Food Programme (2015) Food Consumption Score Nutritional Quality Analysis - Technical Guidance Note.
 Households were asked to report the number of days per week they consume foods in different food groups, which was used to derive a Household Dietary Diversity score. UN Food and Agriculture Organisation (2011) Guidelines for Measuring Household and Individual Dietary Diversity.

^{4.} Households could select as many options as applied, meaning the sum of percentages may exceed

^{5.} In the 30 days prior to data collection.

Households could select up to three options.
 Enumerators were asked to observe the state of the tent and record its condition.
 As reported by the camp manager in KI interview.

Top three reported anticipated NFI needs for the three months following data collection:1

Carpet/mat for the floor	60%	
Winter blankets	37%	
Washing powder (for clothes)	28%	

Fire safety

Camp management reported that all four tents have a fire extinguisher were available and that actors in the camp informed residents with information on fire safety in the three months prior to data collection.

86% of households reported that they had received information about fire safety, 4% of which reported comprehension difficulties of the information received. 99% reported knowing of a fire point in their block.

LIVELIHOODS

Household income

Average monthly household income:² 660,788 SYP (157 USD)³

Top three reported livelihoods-related coping strategies:1,2

Borrowed mor	iey	84%	
Sold some assistance items receiv	ed	64%	
Reduced spending on non-food expenditur such as health or educati		28%	

64% of households reportedly sold assistance items with Food assistance followed by Other being the most commonly sold. The main reason households reported for selling assistance were I needed cash for more urgent spending(59%) and The item/ assistance is useful, but not the first priority (44%).

The most commonly sold food items were Lentils (66%), Chickpeas (64%) and Bulgur wheat (39%).

Most commonly reported ways money from sales was used:

Spent the money on food 97% Spent the money on health expenses 52% Spent the money on debt repayment 13%

Households could select up to three options.
 In the 30 days prior to data collection.
 The effective exchange rate for Northeast Syria was reported to be 4,220 Syrian Pounds to the dollar in August 2022 (Reach Initiative, NES Marke Monitoring Exercise 22-August).

could select as many options as applied 5. Findings refer to the subset of households reporting on the given information or issue.

WATER, SANITATION AND HYGIENE (WASH)

Water

Public tap/standpipe (e.g. from water tank), Tanker truck_NGO was the primary source of water at the time of data collection. The public tap/standpipe was reportedly used by 88% of households for drinking water.

No issues

0% of households reported they spent at least two consecutive days without access to drinking water over the two weeks prior to data collection.

% of households by reported drinking water issues:1

Water tasted/smelled/looked bad People got sick after drinking 78% **15%** 0%

87% of households reported that their drinking water was treated over the two weeks prior to data collection. It was treated at the source and Household filtered the water were the most commonly used methods, accounting for 87% and 2%, respectively.

24% of households reportedly used negative strategies to cope with lack of water in the two weeks prior to data collection.

Most commonly reported negative strategies by households: 1

- Relied on previoulsy stored water (20%)
- Modified hygiene practices (bathe less, etc) (4%)
- Collected water from unprotected source (e.g. spring, stream, pond) (0%)

7% of households reported having at least one member suffering from diarrhoea2.

Hygiene

79% of households reportedly didn't have access to a private handwashing facility.

99% of households reported having hand/body soap available at the time of data collection.

88% of households were able to access all assessed hygiene items in the two weeks prior to data collection.³ The most commonly inaccessible items included Washing powder (1kg), and Detergent for dishes. Hygiene items were most commonly inaccessible because households Couldn't afford it.

Latrines

Number of communal latrines:4

Number of household latrines:4

Types of defecation facilities used:

· Household: 100% · Communal: Open defecation 0%

1% of households reported that some members could not access latrines, with Persons with disabilities (1%) and Boys (0-17) (0%) being most frequently reported by households.

Communal latrine characteristics, by % of households reporting⁵

% of households by reported level of cleanliness in the communal latrines

22% Very clean 59% Mostly clean 19% Somewhat unclean 0% Very unclean

Showers

119 Number of communal showers:4 1,387 Number of household showers:4

Shower/bathing place usage:6	available¹	used
Household:	0%	0%
• Communal:	13%	1%
 Bathing in shelter: 	101%	98%

Waste disposal7

Primary waste disposal system: Garbage_collection_

Disposal location: A garbage dump located about 1.5 km away from the camp in the village of Gana Sewage system: sewage_network

The primary issue with garbage reported by households was Insufficient number of bins/dumpsters (3% of households).

^{1.} Households could select as many options as applied, meaning the sum of percentages may exceed

<sup>100%.

2.</sup> Self-reported by households and not verified through medical records.

3.The assessed hygiene items included: hand/body soap, sanitary pads, disposable diapers, washing powder, jerry cans/buckets, toothbrushes (for adults and children), toothpaste (for adults and children), shampoo (for adults and babies), cleaning liquid (for house), detergent for dishes, plastic garbage bags, washing lines, nail clippers, combs, and towels.

^{4.} Communal latrines and showers are shared by more than one household. Household latrines and showers are used only by one household. This may be an informal designation that is not officially enforced.

Excluding households who answered 'not sure'.

A shower is defined as a designated place to shower as opposed to bathing in shelter (i.e using a bucket).
7. As reported by the camp manager in KI interview.

ੇ HEALTH

Number of healthcare facilities in camp: 2 **Types of facilities:** Mobile health clinic, clinic

Available services at the accessible health centres:

Emergency:	NA	YES
Minor surgery:	NA	NO
X-Ray:	NA	NO
Lab services:	NA	NO

80% of households reported that health-related assistance was not meeting their minimum health needs. Households' most commonly reported health needs were Chronic diseases treatment (49%) and Child health and nutrition (including malnutrition) (48)%.

Of the 77% of households who required treatment in the 30 days prior to data collection, 93% reportedly faced barriers to accessing medical care.

Most commonly reported barriers to accessing medical care:2

- Unaffordability of health services (93%)
- Lack of medicines at the health facilities (75%)
- High transportation costs to health facilities (72%)

Households reporting that a member had given birth since living in the camp:

33%

Of the 33% reporting a birth in their household, 94% reported that the women delivered In a health facility.

10% of households had at least one person with a respiratory illnesses; and 0% of households reported at least one member with leishmaniasis in the two weeks prior to data collection.²

Vulnerable groups

Households reporting members in the following categories:3

Person with chronic illness8 Person with serious injury/disease (requires medical attention) Pregnant or lactating woman

Of the 37% of households with a member living with a chronic disease, 8% reported that required medicine was not available, but 73% reported that they could not afford the required medicine.

2% of household heads were reportedly living with a disability.^{3,4,5}

72% of households with a pregnant or lactating woman, or with a woman who gave birth while living in the camp had reportedly been able to access obsteric or antenatal care.

Children and infant health

71% of children under five years old were reportedly vaccinated against polio. 73% of children under two years old had reportedly received the DTP vaccine and 71% the MMR vaccine.

Immunization services for childen was reported by 23% of households as a priority health need.

The camp management reported that infant nutrition items had not been distributed in the 30 days prior to data collection. The following nutrition activities have reportedly been undertaken:6

Screening and referral for malnutrition:	YES
Treatment for moderate-acute malnutrition:	YES
Treatment for severe-acute malnutrition:	YES
Micronutrient supplements:	YES
Blanket supplementary feeding program:	YES
Promotion of breastfeeding:	YES

Movements of individuals reported in the 30 days prior to the assessment:1

New arrivals Departures

On average, households in the camp had been displaced 3 times before arriving to this camp, and 97% of households in the camp had been displaced longer than one year.

Households planning to leave the camp:

Within 1 year After more than 1 year Not planning to leave 100%

100% of households had no intention to leave the camp, mainly because Waiting for area of origin to be safe (43%), There were food distributions in the camp (25%) and There were NFI distributions in the camp (17%).

The main reasons for the -% of households with intentions to leave were NA (NA%) and NA (NA%).

PROTECTION

Protection concerns

✓ 51% of households reported being aware of safety and security issues in the camp during the two weeks prior to the assessment.

The most commonly reported security concerns were:

- Danger from snakes, scorpions, mice (33%)
- Theft (23%)

45% of households reported at least one member suffering from psychosocial distress.2

21% of households with children aged 3-17 reported that at least one child had exhibited **changes in behaviour**³ in the two weeks prior to data collection.

Freedom of movement

Camp management reported that all residents who needed to leave the camp temporarily could do so at the time of data collection. 7% of households reported to be able to leave without disclosing the medical reason for leaving.

Most commonly reported barriers among the 88% households reporting to have experienced barriers when trying to leave the camp in the two weeks prior to data collection

- Site departure conditions (need approval) (77%)
- Transportation options available but too expensive (65%)
- Insufficient transportation (34%)

At the time of data collection, no interventions were addressing the needs of older persons or persons with disabilities.1

Documentation

11% of households reported having at least one married person who was not in possession of their marriage certificate.

26% of households with children below the age of 17 reported that at least one child did not have any birth registration documentation.

Gender-based violence

Households reporting knowing about any designated space for women and girls in the site:

98% Yes 2% Nο

Of the 98% of households who know about a designated women and girls space, 38% reported that a girl or woman from their household attended one in the 30 days prior to data collection.

0% men and boys reportedly avoided camp areas for safety and security reasons, NA% of whom avoided NA most commonly. 0% of women and girls, reportedly avoided camp areas, NA% of whom avoided NA most commonly.

Child protection

27% of households reported gender-based protection issues with Early marriage (girls below 18 years old) (22%) and Denial of resources, opportunities, or services (5%) being the most commonly reported.

Households reporting knowing about any child-friendly space in the site:

66% Yes

Of the 66% of households who know about any child-friendly spaces, 18% reported that a child from their household attended one in the 30 days prior to data collection.

^{1.} As reported by the camp manager in KI interview.

As reported by households themselves. Assessed symptoms included: persistent headaches, sleeplessness, and more aggressive behaviour than normal towards children or other household members.

^{3.} Changes in sleeping patterns, interactions with peers, attentiveness, or interest in other 4. Self-reported by households and not verified through medical records.

Households reporting the presence of child protection concerns within the camp (in the two weeks prior to data collection):

63% Yes 37% No

Of the 63% of households who reported child protection concerns, 59% identified Child labour and 21% Early marriage (below 18 years

61% of households reported that they were aware of child labour occuring among children under the age of 11, most commonly reporting Domestic labour (43%) and Agriculture (16%).1,2

Of the households who reported Child labour among the child protection incidents they were aware of occurring within the camp in the 30 days prior data collection, 95% were identified as child labour occuring for boys and 100% occuring among girls.

Most commonly reported types of child labour by gender:1,2

Boys (95%)

Girls (100%)

- Schools closed/educational services suspended due to summer holiday (25%)
- Child did not want to attend (11%)

About REACH's COVID-19 response

As an initiative deployed in many vulnerable and crisis-affected countries, REACH is deeply concerned by the devastating impact the COVID-19 pandemic may have on the millions of affected people we seek to serve. REACH is currently working with Cash Working Groups and partners to scale up its programming in response to this pandemic, with the goal of identifying practical ways to inform humanitarian responses in the countries where we operate. Updates regarding REACH's response to COVID-19 can be found in a devoted thread on the REACH website. Contact geneva@impact-initiatives.org for further information.

- Findings refer to the subset of households reporting on the given information or issue.
 Households could select as many options as applied, meaning the sum of percentages may exceed 100%.
 Households could select up to three options.

About REACH Initiative

REACH Initiative facilitates the development of information tools and products that enhance the capacity of aid actors to make evidence-based decisions in emergency, recovery and development contexts. The methodologies used by REACH include primary data collection and in-depth analysis, and all activities are conducted through inter-agency aid coordination mechanisms. REACH is a joint initiative of IMPACT Initiatives, ACTED and the United Nations Institute for Training and Research - Operational Satellite Applications Programme (UNITAR-UNOSAT).
