

# Multi-sectoral needs analysis in Areas of Return

September 2023 | Northwest Syria

## KEY MESSAGES

- **Food was reported as a priority need** in the assessed locations by **more than half of the KIs**. It was also reported as the **most common need for IDPs** in every assessed sub-districts.
- **Shelters remain in poor condition** in most assessed locations. KIs interviewed in **August 2023** reported that **almost one in four shelters was seriously damaged in the Jandairis and Salqin sub-districts**.<sup>(4)</sup>
- **Economic conditions are particularly complicated for IDPs in the Salqin sub-district**, where all KIs interviewed in August 2023 reported that income did not cover cost of living.
- **Access to electricity is particularly low** in the assessed locations, where most KIs reported **high price** of electricity as the main barrier.

# 71%

of KIs reported **tents as a common shelter type for IDPs** in the assessed locations

# 80%

of KIs reported that **income did not cover costs of living for IDPs** since March 2023

### Coverage map

This analysis focuses on 72 communities in 3 assessed sub-districts

## CONTEXT & RATIONALE

On 6 February 2023, two major earthquakes hit southern Türkiye, close to the Syrian border, with respective magnitudes of 7.7 and 7.6, causing more than 50,000 deaths. Their impacts were also felt in Northwest Syria (NWS), causing the displacement of more than 70,000 individuals, and exacerbating needs for humanitarian support.<sup>(1)</sup>

More than 6 months after the earthquakes, the movements of populations displaced by the earthquakes back to their previous area of living remain quite limited, and the needs in these locations are largely under-documented. This assessment thus provides humanitarian actors with an overview of the needs and living conditions in Jandairis, Afrin and Salqin sub-districts, which constitute main areas of post-earthquake departures.<sup>(2)</sup>

## ASSESSMENT OVERVIEW

The assessment aims to improve knowledge on the current situation and needs in areas of post-earthquake departures and on potential challenges preventing returns of both residents and IDPs to the areas where they were living before the earthquake, with a view to help identifying sectors to prioritize.

### METHODOLOGY:

This assessment builds on data collected during five rounds<sup>(3)</sup> of the Humanitarian Situation Overview in Syria (HSOS) project. It presents results for 72 communities in the Jandairis, Afrin and Salqin sub-districts, as well as the average in NWS as a baseline. As described in the "Methodology Overview" section, data was collected on a monthly basis by REACH and partners using a Key Informant (KI) methodology at community level.

## PRIORITY NEEDS

**59%** of KIs reported Food as a priority need in the assessed communities <sup>(1)</sup>

### Evolution of the main priority needs of both IDPs and Residents reported in the assessed locations since March 2023

(by % of assessed communities)

### Top priority needs in each of the assessed sub-districts

(for all assessed communities)

	IDPs	Residents
<b>Afrin</b>	Food	Food
<b>Jandairis</b>	Food	Health
<b>Salqin</b>	Food	WASH

### Key Findings

- Food was reported as the **top priority need for IDPs in all the assessed sub-districts**.
- Livelihood was reported as a **priority need for both IDPs and Residents by 45% of KIs in assessed locations, against 60% across Northwest Syria (NWS)**.
- Shelter was reported as a **priority need for IDPs and Residents by 29% of KIs interviewed in August 2023, against 55% in March**.

### Most commonly reported priority needs

(by % of assessed communities)<sup>(2)</sup>

#### → IDPs

NWS average

Food	<b>63%</b>	58%
Shelter	<b>45%</b>	46%
Livelihood	<b>44%</b>	59%

#### ↕ Residents

Food	<b>55%</b>	52%
Livelihood	<b>46%</b>	62%
WASH	<b>43%</b>	50%

### Key Findings

- KIs reported that **50%** of communities that had access to humanitarian assistance received **Food and Nutrition support, against 58% across NWS**
- In the **Afrin** sub-district, **15%** of KIs interviewed in **August 2023** reported that households had **access to humanitarian assistance, against 59% across NWS**.

### Access to humanitarian assistance for IDPs and residents in assessed locations since March 2023

(by % of assessed communities)

## HUMANITARIAN ASSISTANCE

**68%**

of KIs in communities where humanitarian assistance was accessible reported that assistance provided was not enough to cover all people in need

### Types of humanitarian assistance provided

(by % of assessed communities where households had access to humanitarian assistance)

NWS average

Food and Nutrition	<b>50%</b>	58%
Cash assistance (vouchers or cash in hand)	<b>39%</b>	33%
Health	<b>34%</b>	41%

### Most commonly reported challenges in accessing humanitarian assistance for IDPs and Residents

(by % of assessed communities where households had access to humanitarian assistance)

→ IDPs	↕ Residents
65% Assistance provided was not enough to cover all people in need	70%
53% Quantity of assistance provided was not enough	57%
30% Some people did not comply with the eligibility criteria	33%

## ECONOMIC CONDITIONS

**76%** of KIs reported that income does not cover costs of living for IDPs and residents in the assessed locations

**Average daily wage for unskilled labour for both IDPs and residents in the assessed locations since March 2023**

**Priority livelihood needs in assessed locations**  
(by % of assessed communities)

### Key Findings

- KIs interviewed in **August 2023** reported that the **average daily wage** for unskilled labour in Salqin amounted to **60 Turkish Lira, against 69 across NWS.**
- **Access to credit** was reported as a priority livelihood need for both IDPs and residents by **39% of KIs, against 59% across NWS.**
- **83% of KIs interviewed in August 2023** reported that **income did not cover cost of living** for IDPs, **against 76% in March 2023.**

### Most commonly reported barriers to accessing livelihoods in the assessed locations

(by % of assessed communities)

#### IDPs

Barrier	Assessed	NWS average
Income does not cover cost of living	80%	82%
General lack of employment opportunities	69%	71%
Lack of employment opportunities that match people's skills	41%	44%

#### Residents

Barrier	Assessed	NWS average
Income does not cover cost of living	72%	77%
General lack of employment opportunities	66%	70%
Lack of employment opportunities that match people's skills	38%	45%

### Key Findings

- **71% of KIs reported tents** as a common shelter type for IDPs in the assessed locations, **against 45% across NWS**
- **50% of KIs reported households's own production and farming** as a main source of food in assessed locations, **compared to 59% across NWS.**
- **12% of KIs reported the presence of solid waste in streets** of the assessed locations, **against 15% across NWS**

### Most common shelter types

(by % of assessed communities)

### Evolution of the proportion of shelters with serious damage

(by % of shelters destroyed or with major/severe damages in all assessed locations)

## LIVING CONDITIONS

**26%** of shelters in the Jandairis sub-district remained seriously damaged in August 2023

### Reported sanitation issues in the assessed locations

(by % of assessed communities)

Issue	Assessed	NWS average
Unsafe soak pit	56%	62%
Sewage network does not reach all households	33%	32%
Sewage network need repair and cleaning	28%	30%

### Most common sources of food for households other than markets

(by % of assessed communities)

Source	Assessed	NWS average
Own production and farming	50%	59%
Relying on food stored previously	36%	29%
Food gifts from friends and family	17%	13%
Assistance from local councils, NGOs and other groups	15%	18%

## ACCESS TO SERVICES

**36%** of households in assessed communities had in average less than 6 hours of electricity per day

### Infrastructures

Most common **infrastructure needs** (by % of assessed communities)

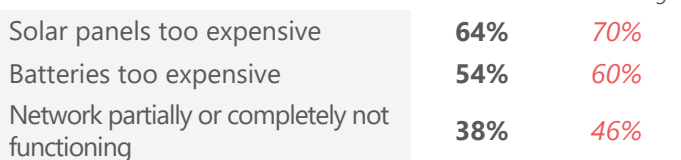

### Access to Electricity

Average daily number of **hours with access to electricity** (for households in all assessed communities)

Barriers to **accessing electricity** (by % of communities)

### Access to Sanitation and Hygiene

Proportion of communities **connected to a sewage system** (by % of assessed communities)

Most common **sanitation needs** (by % of assessed communities)

### Key Findings

- KIs reported that **48%** of households had in average **less than 6 hours** of electricity per day in **Afrin**, **against 16% across NWS**.
- **High prices** were considered as the main **barrier to accessing electricity**, with **64%** KIs reporting high prices of **solar panels**, **54%** for **batteries** and **24%** for **fuel**.
- **68%** of KIs interviewed in **August 2023** reported that households were able to **access food markets** in assessed locations, **against 81% in March**.

### Access to Water

**50%** of KIs reported that all households had sufficient access to water in assessed locations, **against 48% across NWS**

Barriers to **accessing sufficient water**

Most common **needs related to access to water** (by % of assessed communities)

### Access to Markets

Proportion of communities where households had **access to food markets** (by % of assessed communities)

People lack financial means to open shop/market

Was the most commonly reported **reason for why markets were not functioning**

(reported by KIs in 76% of assessed communities where markets were not functioning)

Barriers to **physically access food markets**

## Access to Education<sup>(1)</sup>

**35%** of KIs reported that **more than 75% of both IDP and Resident children had access to education services** in assessed locations, **against 42% across NWS**

### Barriers preventing access to education

(by % of assessed communities where not all school-aged children could access education, for both IDP and resident children) *NWS average*

Families cannot afford to prioritize school and children must work	<b>69%</b>	<i>68%</i>
High cost of transportation to school	<b>68%</b>	<i>64%</i>
Lack of transportation to school	<b>47%</b>	<i>53%</i>

### Most common education needs

(by % of assessed communities where school-aged children could access education, for both IDP and Resident children)

## Access to Health Services

**54%** of KIs reported that households were able to **access health services** in the assessed locations, **against 49% across NWS**

### Barriers to healthcare access

(by % of assessed communities)

		<i>NWS average</i>
High cost of transportation to health facilities	<b>64%</b>	<i>68%</i>
Lack of transportation to health facilities	<b>53%</b>	<i>58%</i>
Health facilities not easily accessible for people who have difficulties moving/seeing/hearing	<b>31%</b>	<i>24%</i>

## SECURITY, SAFETY AND PROTECTION

**28%** of KIs reported that shelters for Residents were unsafe

### Most common inadequacies making IDP and Resident shelters unsafe

(by % of assessed communities)

		<i>NWS average</i>
Lack of lighting around shelters	<b>62%</b>	<i>58%</i>
Shelters have minor damages	<b>38%</b>	<i>37%</i>
High temperatures in shelters	<b>35%</b>	<i>34%</i>

### Key Findings

- In August 2023, **90% of KIs in Salqin** and **83% in Afrin** reported **high temperatures inside IDP shelters** as a common inadequacy rendering them unsafe.
- 48% of KIs interviewed in August 2023** reported **fear of hazards** as a main protection risk for both residents and IDPs, **against 61% of KIs in March**.

### Main protection risks faced by IDPs and Residents

(by % of assessed communities)

### Evolution of reported safety and security concerns at markets in assessed locations

(by % of KIs that reported safety and security concerns at markets as a barrier to physically access food markets)

## METHODOLOGY OVERVIEW

This research project uses data collected as part of several rounds of the Humanitarian Situation Overview in Syria (HSOS) project. The data was collected on a monthly basis by REACH and partners using a Key Informant (KI) methodology. Each round, enumerators interviewed three to six key informants in every assessed location and submitted one form per community, using a survey tool coded in Kobo (Open Data (ODK) compliant platform).

The HSOS initiative aims to provide multi-sectoral information on the needs and humanitarian conditions in NWS. It covers a wide range of sectors and indicators, notably linked to Demographics, Shelter, Electricity & Non-food Items (NFIs), Food Security, Livelihoods, Water, Sanitation and Hygiene (WASH), Health, Education, Protection, Accountability and Humanitarian Assistance, Priority Needs.

This analysis presents results related to the main multisectoral needs and challenges for both resident and IDP populations in areas that noticed highest levels of post-February 2023 earthquakes, where returns remain low. Namely, this analysis focuses on the Jandairis, Salqin and Afrin sub-districts, which were selected based on the main findings from [REACH NWS - Post-Earthquake Returns Analysis](#), which analyzed trends of returns in NWS following the earthquakes.

To ensure comparability across different rounds of data collection, this research project disregards data from rounds that do not cover Northern Aleppo (May 2023), and focuses on communities that were assessed in 5 rounds of HSOS data (March, April, June, July, August 2023). Once cleaned, the data was aggregated and analyzed at the appropriate geographic coverage (i.e. 72 communities across the Jandairis, Salqin

and Afrin sub-districts) to focus on the situation and needs in areas of return across the different sectors covered by HSOS. Unless specified otherwise, findings of this analysis are presented as average values across the 5 rounds of data collection in the 3 assessed sub-districts. When relevant, this factsheet also presents results disaggregated by month (results disaggregated by month correspond to the month of data collection, which focuses on the situation during the previous month) or sub-district, and compares findings with average results across Northwest Syria.

As a result of slight changes in coverage between different rounds, notably due to changing access restrictions, this study does not include all communities in the assessed sub-districts, but covers more than half of them<sup>(1)</sup>.

Another potential limitation of this analysis is related to the fact that it does not directly focus on returns. Since the data collected for this research project provides a snapshot of the living conditions and needs within the assessed locations, it does not directly investigate the motivations or intentions of displaced individuals to return to the area where they lived before the earthquake. This could be addressed through specific assessments at household level to identify conditions of return.

Finally, this analysis assesses the living conditions and needs in the main areas of post-earthquake departures, and aims at identifying specific challenges and barriers preventing returns. However, in the absence of clear data on the profiles of populations displaced by the earthquake (whether they were residents or already displaced) and their motives, it is unclear whether displaced populations are willing to return to their areas of living before being displaced as a result of the earthquake.

## ENDNOTES

### PAGE 1

<sup>1</sup> OCHA (April 28, 2023): [North-West Syria Situation Report](#)

<sup>2</sup> Post-earthquake displacements refer to internal displacements that occurred in the immediate aftermaths of the earthquakes in February 2023.

<sup>3</sup> This factsheet presents findings for communities covered in March, April, June, July and August HSOS rounds.

<sup>4</sup> Shelters with "serious" damage presented in this factsheet correspond to the "major damage", "severe damage" and "completely destroyed" categories reported by KIs.

### PAGE 2

<sup>1</sup> KIs were asked to select a first, second and third main priority need for both IDPs and residents in their communities. The rankings show the needs most frequently chosen as either first, second or third main priority need.

<sup>2</sup> By default, findings of this analysis are presented as average values across the 5 rounds of data collection in the 3 assessed sub-districts.

### PAGE 5

<sup>1</sup> Due to summer holidays, this factsheet only presents findings related to access to education for the months of March, April and June.

### PAGE 6

<sup>1</sup> This analysis covers more than half of the communities in the assessed sub-districts (47% of communities in Afrin, 55% in Jandairis, 58% in Salqin).

## ABOUT REACH

REACH Initiative facilitates the development of information tools and products that enhance the capacity of aid actors to make evidence-based decisions in emergency, recovery and development contexts. The methodologies used by REACH include primary data collection and in-depth analysis, and all activities are conducted through inter-agency aid coordination mechanisms. REACH is a joint initiative of IMPACT Initiatives, ACTED and the United Nations Institute for Training and Research - Operational Satellite Applications Programme (UNITAR-UNOSAT).
