

South Sudan - Water, Sanitation and Hygiene (WASH)

Assessment of Hard-to-Reach Areas in South Sudan

South Sudan Displacement Crisis

May 2019

Overview

The continuation of conflict since December 2013 has created a complex humanitarian crisis in the country, restricting humanitarian access and hindering the flow of information required by aid partners to deliver humanitarian assistance to populations in need. To address information gaps facing the humanitarian response in South Sudan, REACH employs its Area of Knowledge (AoK) methodology to collect relevant information in hard-to-reach areas to inform humanitarian planning and interventions outside formal settlement sites.

Using the AoK methodology, REACH remotely monitors needs and access to services in the Greater

Upper Nile, Greater Equatoria and Greater Bahr el Ghazal regions. AoK data is collected monthly and through multi-sector interviews with the following typology of Key Informants (KIs):

- KIs who are newly arrived internally displaced persons (IDPs) who have left a hard-to-reach settlement in the last month
- KIs who have had contact with someone living or have been in a hard-to-reach settlement in the last month (traders, migrants, family members, etc.)
- KIs who are remaining in hard-to-reach settlements, contacted through phone

Selected KIs are purposively sampled and have knowledge from within the last month about a specific settlement in South Sudan, with data collected at the settlement level. About half of settlements assessed have more than one KI reporting on the settlement. In these cases, data is aggregated at the settlement level according to a weighting mechanism, which can be found in the Terms of Reference (ToRs).

[\(Link to AoK Terms of Reference \)](#)

All percentages presented in this factsheet, unless otherwise specified, represent the proportion of settlements assessed with that specific response.

The findings presented in this factsheet are indicative of the broad water, sanitation and hygiene (WASH) trends in assessed settlements in May 2019, and are not statistically generalisable.

Assessment Coverage

2,126 Key Informants interviewed

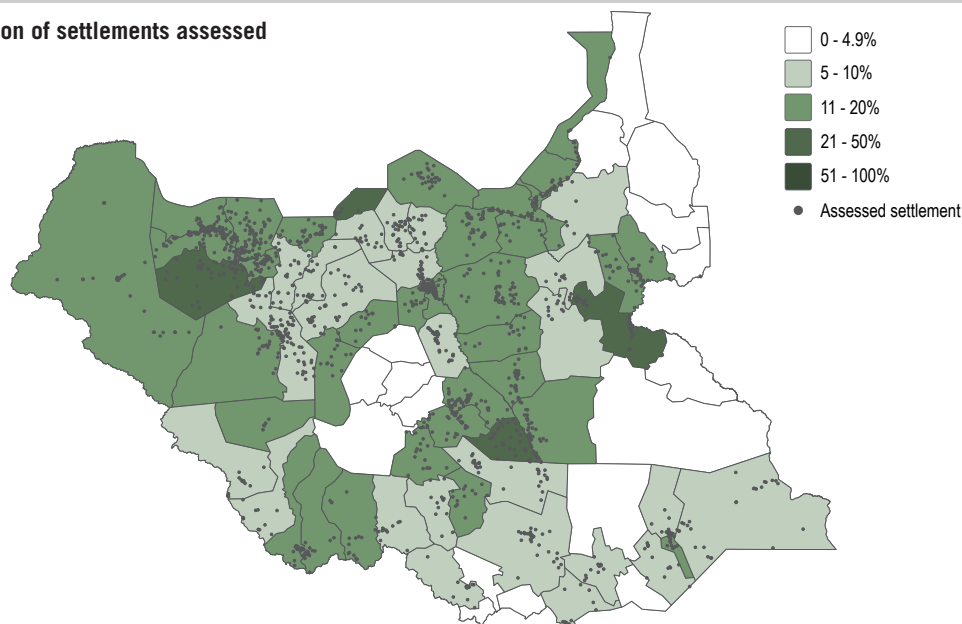

1,696 Settlements assessed

62 Counties assessed

61 Counties with 5% or more coverage¹

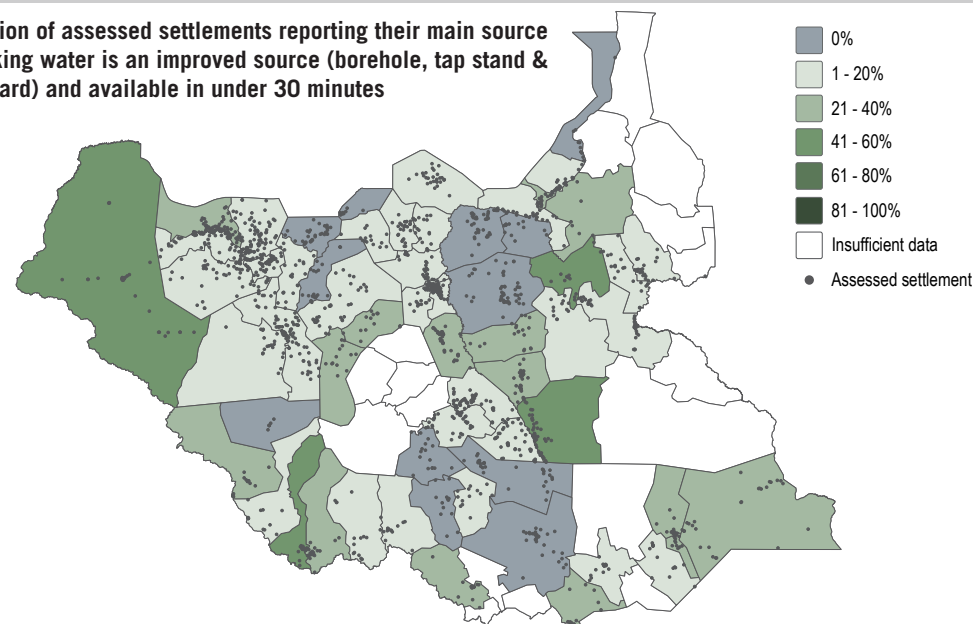

Assessment coverage

Proportion of settlements assessed

Improved Water Sources

Proportion of assessed settlements reporting their main source of drinking water is an improved source (borehole, tap stand & water-yard) and available in under 30 minutes

¹ Data is only represented for counties in which at least 5% of settlements have been assessed. The most recent OCHA Common Operational Dataset (COD) released in February 2016 has been used as the reference for settlement names and locations.

Assessment of Hard-to-Reach Areas in South Sudan

South Sudan Displacement Crisis

May 2019

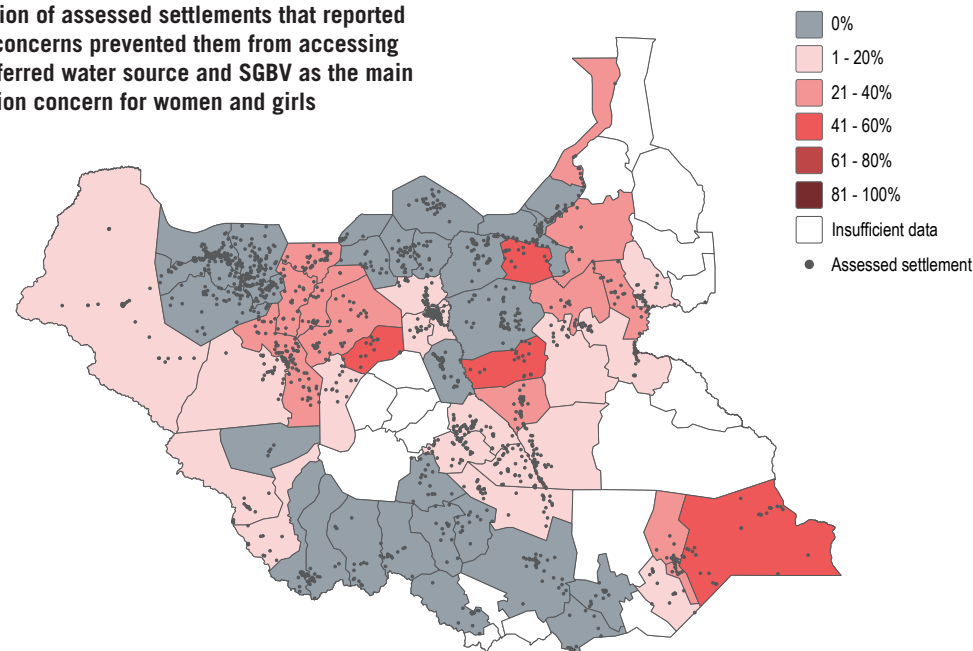

Access to water

Proportion of assessed settlements reporting the main source of drinking water is an unimproved source (river, swamp, unprotected well etc)

Safe water access and sexual and gender based violence (SGBV)

Proportion of assessed settlements that reported safety concerns prevented them from accessing the preferred water source and SGBV as the main protection concern for women and girls

Drinking water source

Top five assessed counties reporting an unimproved source or surface water (river, swamp, unprotected well) as their main source of drinking water

Canal/Pigi	100%	<div></div>
Manyo	100%	<div></div>
Panyikang	94%	<div></div>
Fashoda	90%	<div></div>
Fangak	90%	<div></div>

Water access time

Top five assessed counties reporting needing more than 30 minutes to access their preferred drinking water source

Abiemnhom	100%	<div></div>
Mvolo	100%	<div></div>
Nagero	100%	<div></div>
Terekeka	100%	<div></div>
Twic	97%	<div></div>

Seasonal access to water

Top five assessed counties reporting access to the preferred drinking water source is only available in the wet season

Ezo	77%	<div></div>
Yambio	70%	<div></div>
Tambura	67%	<div></div>
Jur River	58%	<div></div>
Nzara	53%	<div></div>

Protection and water access

Top five assessed counties reporting safety concerns preventing them from accessing their preferred water source

Twic East	67%	<div></div>
Duk	65%	<div></div>
Jur River	62%	<div></div>
Tonj East	57%	<div></div>
Kapoeta East	52%	<div></div>

South Sudan - Water, Sanitation and Hygiene (WASH)

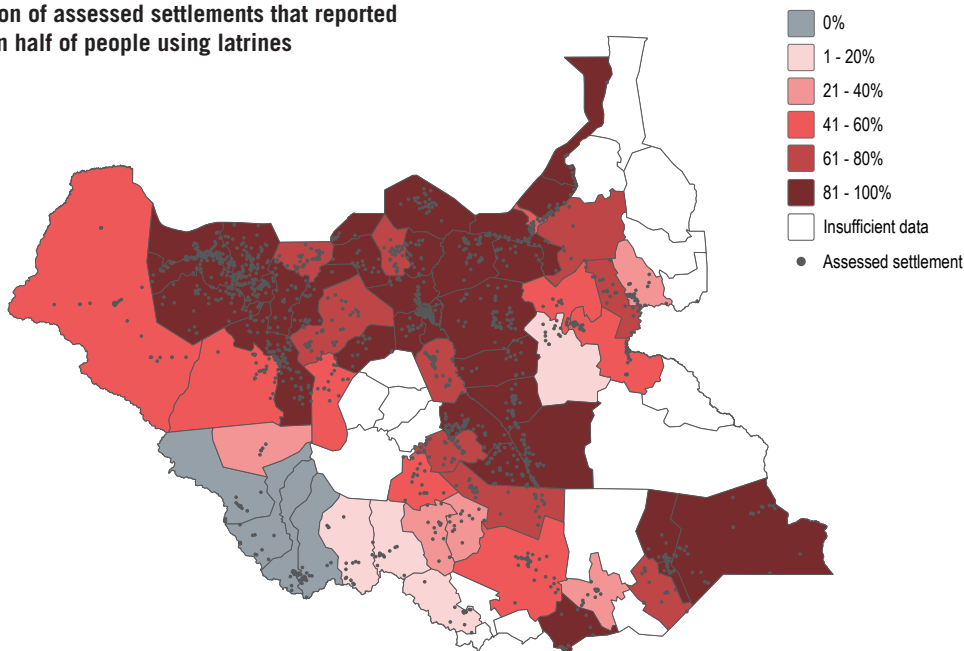

Assessment of Hard-to-Reach Areas in South Sudan

South Sudan Displacement Crisis

May 2019

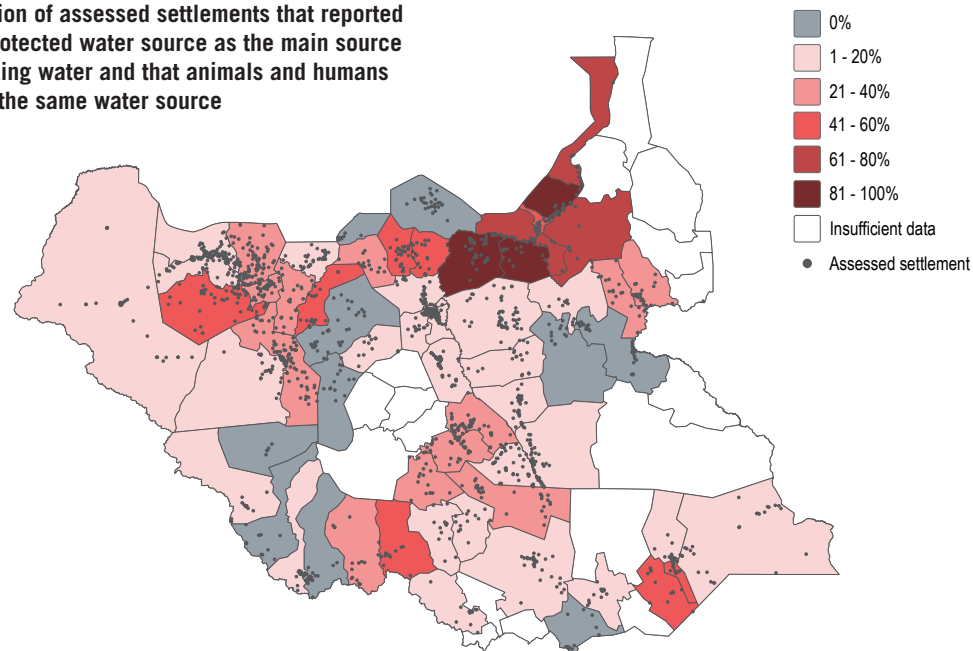

Latrine use

Proportion of assessed settlements that reported less than half of people using latrines

Humans and animals sharing water source

Proportion of assessed settlements that reported an unprotected water source as the main source of drinking water and that animals and humans shared the same water source

Overcrowded latrines

Top five assessed counties reporting not being able to use a latrine due to overcrowding

Ulang	29%
Twic	27%
Ayod	24%
Tonj North	24%
Akobo	23%

Latrine availability

Top five assessed counties reporting not being able to use a latrine because none are available

Abiemnhom	100%
Pariang	100%
Aweil South	98%
Aweil Centre	92%
Aweil West	91%

WASH based mortality

Top five assessed counties reporting cholera or diarrhoea as their main cause of death

Twic	38%
Gogrial West	38%
Tonj South	29%
Aweil North	28%
Maridi	27%

WASH based health concerns

Top five assessed counties reporting cholera or diarrhoea as their main health problem

Nzara	53%
Yambio	48%
Twic	41%
Panyijiar	30%
Tonj South	29%
