

# Rapid Response Mechanism: Central African Republic

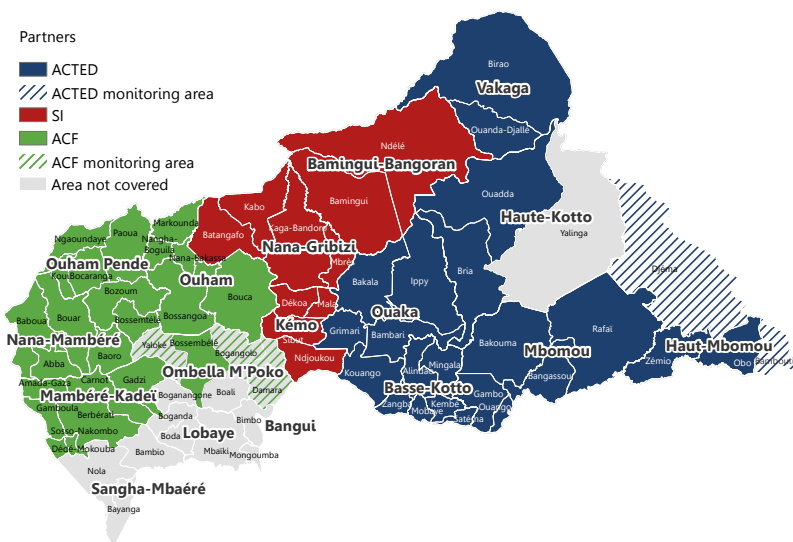

## Annual factsheet

01 January - 31 December 2023

The Rapid Response Mechanism (RRM) has three inter-linked pillars to 1) ensure humanitarian monitoring and alerts system, 2) multi-sectoral assessments, and 3) interventions in emergency WASH and NFI, as well as cash transfers (CT). The interventions packages are adapted to the needs of the affected people, as determined by the assessments. Currently, the RRM is funded by USAID's Bureau for Humanitarian Assistance (BHA), the Directorate-General for European Civil Protection and Humanitarian Aid Operations (DG-ECHO), the Swiss Agency for Development and Cooperation (SDC) and the Swedish International Development Cooperation Agency (SIDA). All RRM products are available on the [portal](#).

## 2023 Coverage

The RRM was established in 2013 and it is implemented by five partners with complementary roles, functions, geographic coverage and capacities: UNICEF, Action Against Hunger (ACF), ACTED, Solidarités International (SI) and Impact Initiative/REACH. In 2023, the RRM covered fourteen of the sixteen prefectures of Central African Republic and performed a continuous monitoring in the so-called "RRM-uncovered areas", which nevertheless remain humanitarian monitoring areas with the use of the key informant's approach. Thus, the RRM manages to keep a country-wide overview on shocks, with an efficient and adaptable capacity to potentially intervene in all regions of CAR, for the alerts falling under its mandate. The RRM weekly coordination meetings are attended by relevant Cluster and emergency partners, which helps timely decisions making and information sharing on alters and interventions. It is also well-integrated into the Humanitarian Architecture in CAR, which is increasingly strengthening synergies on humanitarian monitoring and complementary on emergency interventions.

In 2023, the RRM recorded 125 alerts<sup>1</sup>, which affected 58,532 households (287,413 individuals), of which 250,099 benefitted from the RRM. 81 of these alerts were caused by violence, 26 by natural disasters, 15 by population movements/returnees, and 3 by other causes. These shocks affected 13 of the country's 16 prefectures: the prefectures of Ouham (31%), Ouaka (18%), Bamingui-Bangoran (10%) and Ouham-Pendé (8%) recorded the most shocks over this period.

## Mandate

The RRM is designed to provide rapid humanitarian assistance following both conflict-related shocks and natural hazards which resulted in population displacement, as well as following shocks after the return of formerly displaced people.

The RRM remains very relevant and necessary to a population suffering from multiple shocks, in a country at high risk of humanitarian crisis and with insufficient institutional capacity. The RRM intervenes in coordination with the humanitarian community and provides NFI, WASH, and/or CTP assistance prioritising vulnerable populations and areas with limited response capacity. The RRM aims to start the intervention within 20 days following the confirmation of the alert. Three key pillars are defined in its mandate:

- Maintain and strengthen the humanitarian alerts system and needs assessments ;
- Provide first line response through essential household items and access to basic water, sanitation and hygiene services ;
- Coordinate and advocate to enhance synergies and complementarities with sectors not covered by the RRM.

In 2023, complementary interventions in sectors not covered by the RRM represented 76% cumulatively, of which 58% in Food Security, 21% in WASH, 14% in protection, 11% in Health, 6% in CCCM, shelter, NFI, 5% in logistics, 2% in child protection and 3% in education.

## Methodology

## The RRM intervenes to support in case of a shock:

- Displaced populations (at least 100 households) whose movement occurred within the last 3 months and/or who have only been reachable by humanitarian actors for less than three months.
- Returnees<sup>3</sup> or spontaneously repatriated<sup>4</sup> populations (at least 100 households) whose return occurred within the last 3 months and/or who have only been reachable by humanitarian actors for less than three months.
- Host communities<sup>5</sup> (at least 100 households).

<sup>1</sup>An alert is a document that informs the humanitarian community on a shock caused either by violence or a natural disaster for example, leading to a displacement of population. <sup>2</sup>MEX and MSA are both pre-intervention evaluations of the needs after an alert is shared with the humanitarian community. A MEX is an exploratory mission, while an MSA is a complete needs assessment. <sup>3</sup>The term 'returnees' refers to people who have come back to their pre-crisis location following a period of internal displacement. <sup>4</sup>The term 'repatriated' refers to former refugees who have returned from neighbouring countries. <sup>5</sup>The term 'host community' refers to individuals that have not been displaced as the result of a humanitarian-related event.

15%  
3%

### Recommended interventions, by sector:

Following MSAs, recommendations for each sector are provided by the RRM based on the key indicators collected. In 2023, the RRM provided assistance in 86% of the cases in which a MSA recommended a NFI intervention and 71% of the cases in which a MSA recommended a WASH intervention.

**NFI**

Girls  
Host community  
Boys  
Returnees  
Women  
Rapatriates  
Men

### Efficiency and effectiveness

The RRM remains the first-line response programme with a response timeframe of around 20 days after confirmation of a shock. However, the volatility of the security situation and lack of access in some areas may worsen access to affected people and the affect the strategies for delivering aid, such as reducing intervention window, exposure to risks while organizing/attending a distribution. Likewise, the logistical constraints due to poor road conditions and impassable roads, especially during the rainy season, hamper the deployment of RRM teams. The action plan and reflections have been reinforced through the COPIL<sup>10</sup> (RRM steering committee) in order to minimize at least the internal factors resulting in delays in the response, by proposing – among others – the following strategies: pre-positioning of kits; WASH interventions directly following the evaluation; joining MSA and targeting (depending on the nature of the shock and the security situation); Improving coordination both in the capital and on the field; applying more flexible approaches.

#### Median number of days between the publication of an alert and the beginning of a MSA in 2023:

RRM Response Time  
**07 days** ■

2023 Response Time  
**09 days** ■

2022 Response Time

2023 Response Time  
**23 days** ■

2022 Response Time  
**20 days** ■

### PDM in 2023

**29** PDM  
conducted in 2023

Proportion of beneficiaries reporting to be satisfied with the quality and quantity of the NFI kits:

93% Quality  
79% Quantity

**92%** of beneficiaries  
considered they received NFI  
distributions on time

95,5% of beneficiaries considered all  
the components of the NFI kits were  
of high usefulness

The activities implemented during WASH interventions were adapted considering the highest priority needs of every community. In 2023, amongst the activities implemented were **216 hygiene sensibilisation sessions**, construction of **190 emergency latrines**, rehabilitation of **140 water sites** and establishment or revitalization of **167 water sites** or latrine committees.

<sup>10</sup>Strategic steering committee gathering every Wednesday to provide guidance and validate RRM activities.
