01

Research and analysis design

Calibration Objectives

01

Provide **up-to-date multi-sectoral data** on the evolution of humanitarian needs.

02

Track **seasonal shifts** and emerging trends in the **severity and drivers of needs**, comparing findings with MSNA baseline data.

03

Inform **strategic and programmatic decision-making**, including re-targeting of humanitarian response.

Coverage and Sampling

3,847 household-level interviews conducted across **23 oblasts** and **Kyiv city**.

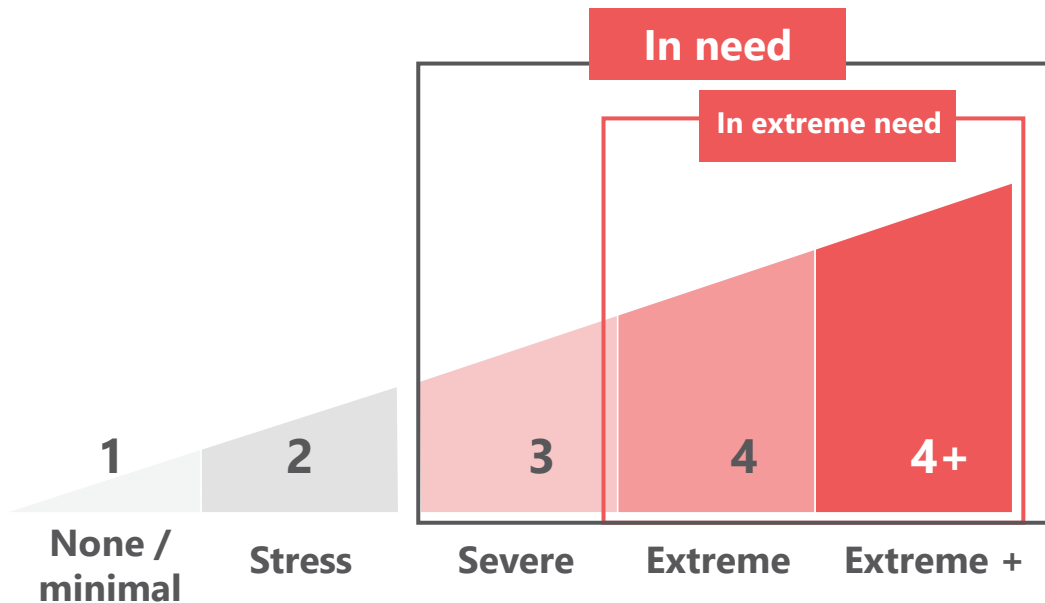

- Collected between **16 December 2024 and 12 January 2025** through randomized **Computer Assisted Telephone Interviews** by a third-party provider (KIIS).
- The Calibration survey was based on the **2024 MSNA questionnaire** to ensure comparability between findings.
- Findings are **representative at the oblast level** with a **95% confidence level and 8-8.6% margin of error**.
- Findings are available at two sub-national geographical levels: macro-region and oblast.
- Findings can be disaggregated for specific population groups based on key **demographic characteristics**. Findings disaggregated for population groups are **indicative**, as well as questions based on a skip pattern.

Analysis Framework

Contextualized Composite Indicator Analysis (CCIA)

- Framework developed by **REACH Ukraine** to conduct in-depth **country-level analysis**.
- It includes sectoral indicators **contextualized** for humanitarian planning and prioritization within Ukraine. Further details are available in the [CCIA Methodological note](#).

- The CCIA measures the **magnitude** and **complexity** of humanitarian needs across sectors, measured through Sectoral Composites.
- The CCIA categorizes each household based on the severity of its needs into five categories.
- Households in need** have a severity score higher than **3**, and **households in extreme need** have a score of **4** and **4+**.
- The CCIA takes a **Mosaic Approach**. Sectoral severity is determined by a composite indicator for each sector. A final severity score is determined for each household based on the highest sectoral severity score.

Sectoral CCIA Severity Score							Final CCIA
Food Security	Health	WASH	Protection	Education	Etc.		
HH1	4	4	4	4	3	3	4
HH2	2	2	4	2	1	1	4
HH3	3	3	3	4+	2	1	4+
Etc.	2	3	1	1	2	1	3

02

Key Takeaways

Key Takeaways

Increased needs between June (2024 MSNA) and December 2024 (Calibration Round 3)

Compared to the 2024 MSNA conducted in May and June 2024, **the prevalence of needs may have increased for most sectors.**

Needs are most severe in oblasts along the front line and Ukraine-Russia border

The percentage of households with extreme need is higher in the **East (56%), South (41%), and North (37%) macro-regions**. Extreme needs notably **increased in the South** since June 2024.

Demographic profiles of needs

IDPs, returnees, rural households, **households with persons with disabilities, large households**, and **households comprising both older and younger members** were more likely to experience extreme needs.

Over half of assessed households had Livelihood and Health needs

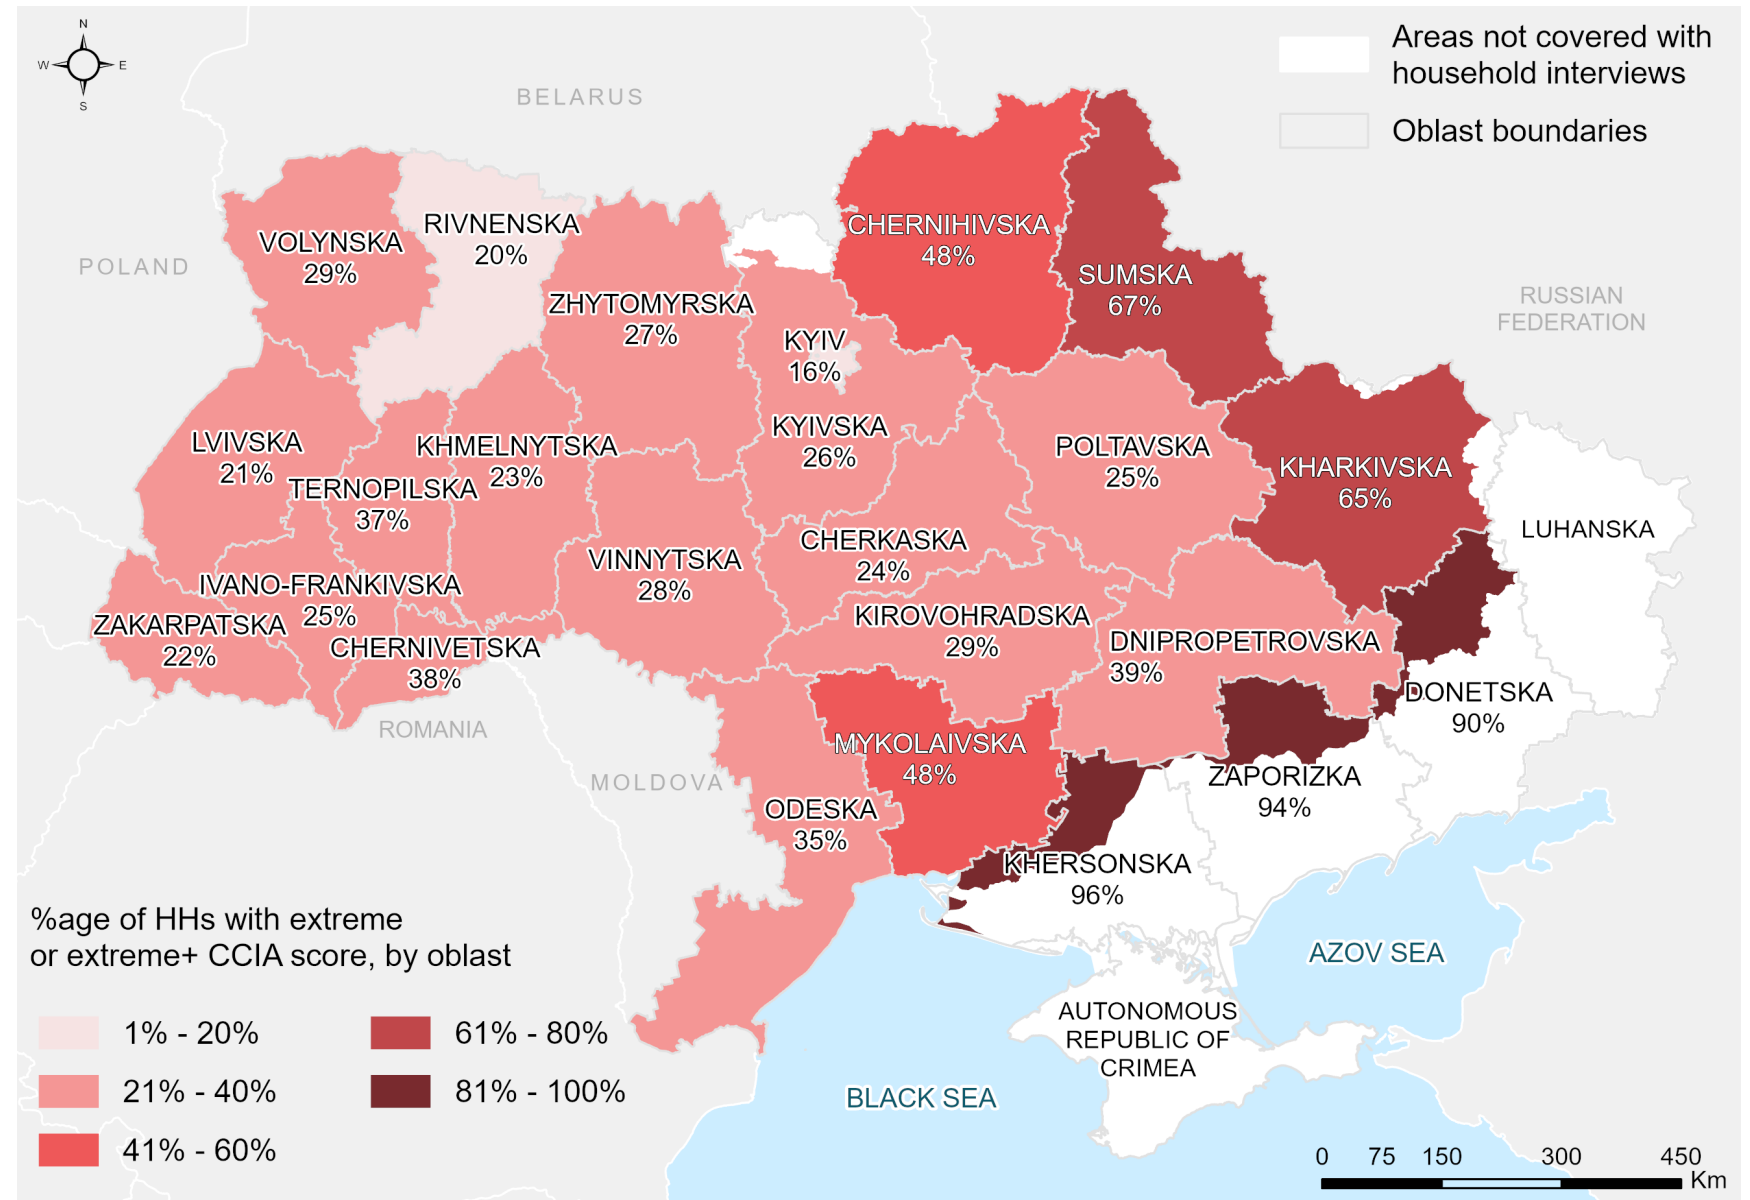

Access to employment and sufficient income was limited in the East and South. In front-line oblasts, **higher reliance on humanitarian assistance** makes households vulnerable in the face of aid reductions. **Healthcare and medicines** were **unaffordable** for many households.

Protection needs remained widespread

45% of households had **Protection needs**, especially prevalent in **the East (78%) and South (66%)** macro-regions.

Geography of extreme need, by oblast

03

Sectoral Findings

Livelihoods

The prevalence of Livelihood needs increased from June 2024 to December 2024:

58%
MSNA

68%
Calibration

KEY DRIVERS

Over two-thirds of households (68%) were identified as being in **need**, with 17% in extreme need. Needs were driven by:

- **Insufficient income quantity:** 44% of the households reported earning an income below the Minimum Expenditure Basket (<6,471.4 UAH).
- **Utilization of coping strategies:** 39% of the households have adopted crisis (34%) or emergency (5%) coping strategies.

GEOGRAPHY

Proportion of HHs by Livelihood CCIA severity score and macroregion

Livelihoods needs were most common in **Donetska** (83%), **Odeska** (78%), **Dnipropetrovska** (78%), **Zaporizka** (78%), **Kharkivska** (77%)

Livelihoods

Coping Strategies

A **greater percentage** of households reported **utilizing coping strategies** in Calibration (66%), compared to 2024 MSNA (45%)

Percentage of Households adopting Livelihood Coping Strategies, by strategy (n=3,356)

The most frequently reported reasons to apply livelihood strategies were to **access and pay for food (49%)**, **healthcare (47%)**, and **shelter (41%)**.

Primary sources of income

Sources of income **varied by oblast**:

- **Fewer households** reported **salaried work** in **Donetska** (32%) and **Khersonska** (35%) **but higher reliance on pensions** (60%, 63%), consistent with a higher prevalence of retired households members.
- **Higher reliance** on **IDP benefits** in **Donetska** (31%), **Kharkivska** (27%), and **Zaporizka** (24%).
- Higher reliance on **humanitarian aid** in **Khersonska** (23%), **Donetska** (16%), and **Mykolaivska** (11%)

Food Security

Potential change in the prevalence of Food security needs from June 2024 to December 2024:

9.5%
MSNA

13%
Calibration

KEY DRIVERS

- **Food consumption score:** 3% of the households had a poor food consumption, and 8% had borderline food consumption. Households living in the East and South, rural households, households with older adults were more likely to have borderline food consumption.
- **Consumption-based coping strategies:** 38% of the households reported relying on less preferred or expensive food, and 17% reported limiting meal portion sizes.

GEOGRAPHY

Proportion of HHs by Food Security CCIA severity score and macroregion

Food Security needs were most common in **Khersonska (25%), Donetska (21%), Zaporizka (19%), and Mykolaivska (19%)**

Protection

Potential change in the prevalence of Protection needs from June 2024 to December 2024:

38%
MSNA

45%
Calibration

KEY DRIVERS

- **Safety and security concerns:** 85% of the households living within the 30 km from the frontline and 75% of those living between 30 and 100 Km reported **conflict-related safety** and **security concerns** impacted their sense of safety.
- **Housing, land, and property (HLP) concerns (20%),** mostly related to having damaged or destroyed housing in government-controlled and occupied areas

GEOGRAPHY

Proportion of HHs by Protection CCIA severity score and macroregion

CCIA:

Severe

Extreme

Extreme+

Extreme protection needs are most severe in **front line oblasts:** Zaporizka (88%), Khersonska (86%), Donetska (85%), Kharkivska (51%), Sumska (48%).

Protection

Safety and security incidents and concerns

59% of households reported violence **impacting private infrastructure**

55% reported violence impacting **public infrastructure**

52% reported **violence impacting civilians**

- Most often reported by households **closer to the frontline**, border with Russia and **Kyiv city**
- Increased percentage of households reporting conflict-related concerns, compared to 2024 MSNA.

Presence of UXOs/landmines

- **16%** of households in the **East**, **15%** in the **North**, and **12%** in the **South** macro-regions **reported observing or suspecting UXO/landmine in their settlements**.
- In **Khersonska**, half of households (48%) reported the presence of UXOs/landmines in their settlement.

Women and men's sense of safety

Besides **conflict-related violence**:

- Few households reported specific factors affecting women (3% reported violence and harassment) or children.
- **Conscription was widely reported as the main factor affecting men's sense of safety (28% of households)**, especially in the **West** (35%). This was **reported by less households compared to the 2024 MSNA (47%)**.

Children separation

- **4% of households (n=157) reported having children currently not living in the household**.
- The most commonly reported reason for separation was the **child living with a foster family** (53%), followed by **children leaving to study** (22%) and to live abroad (19%). Very few households reported the child being separated during displacement (n=8) or having stayed behind in the area of origin (n=3).

Health

The prevalence of Health needs increased from June 2024 to December 2024:

35%
MSNA

51%
Calibration

KEY DRIVERS

Half of households had severe or above Health needs.

Needs were driven by:

- **Households reporting unmet healthcare needs** - including consultation and medication needs for acute and chronic illnesses, surgery, and trauma care.

Calibration also sampled more **households with at least one member with a disability** (31% in Calibration R3 vs. 18% in MSNA), thus elevating health needs.

GEOGRAPHY

Proportion of HHs by Health CCIA severity score and macroregion

Health needs were **widespread across all macroregions** and not limited to frontline oblasts.

Health

Access to healthcare

46% of which **15%**

of HH members reported **needing to access healthcare** in the 3 months prior to data collection.

were **unable to obtain** the desired **healthcare** services.

- A higher percentage of households members in **Donetska (26%), Mykolaivska (21%), and Odeska (19%)** reported being unable to access healthcare compared to other regions.
- Accessibility worsened compared to 2024 MSNA in Mykolaivska (-17 pp), Donetska (-11pp), Lvivska (-11) and Kyiv city (-10).

Barriers to accessing healthcare

- **Widespread affordability issues**, with higher % of households reporting financial barriers in Odeska, Zaporiska and Donetska.
- **Security concerns** while accessing healthcare were reported by 26% of households in **Khersonska**

Access to medicines

- **Medicines remained widely available in Ukraine**, with higher accessibility rates compared to healthcare services.
- Almost three in four households (74%) reported they had sought medicine in the past three months, and out of these 94% said they were able to obtain it.
- In **Donetska** and **Odeska** more households reported medicine availability issues (13%) compared to the national average (6%).

Shelter and NFI

Potential change in the prevalence of SNFI needs from June 2024 to December 2024:

28%
MSNA

35%
Calibration

KEY DRIVERS

Severe SNFI needs (32%) were driven by:

- **Missing winter non-food items (16%)**, including winter clothes, heating appliances, and fuel for heating
- **Tenure security issues (10%)**, due to a significant percentage of IDPs sampled that reported being currently being hosted for free.

Extreme SNFI needs (3%) in the South, East, and North were driven by households reporting **major or catastrophic war-related damage** to their current shelter.

GEOGRAPHY

Proportion of HHs by SNFI CCIA severity score and macroregion

Households in the East and South macroregions were more frequently identified as having SNFI needs.

Shelter and NFI

Damage to housing caused by the war

- **13% of the households (n=586) reported damage caused by the war** to their current shelter.
- Damage to shelter was more commonly reported in **Khersonska** (71%), **Donetska** (45%), **Kharkivska** (36%), **Zaporizka** (31%), **Mykolaivska** (28%).
- More severe damage was more commonly reported in **Khersonska** and **Donetska**.

Percentage of households reporting damage to shelter, by severity of damage and oblast (n=586)

- **Effective shelter response:** 74% of households who reported damage caused by the war since February 2022 also reported the damage was repaired.

Electricity challenges

- The great majority of households nationwide (85%) reported experiencing issues with electricity supply or strength, in line with 2024 MSNA results.
- **18%** of interviewed HHs in **Khersonska** and **10%** in **Donetska** reported having no electricity

Missing NFIs

- Over a third (**35%**) of households reported **missing/inadequate NFIs** in the previous 6 months, consistent with 2024 MSNA findings.

NFIs	Khersonska	Donetska	Mykolaivska	Odeska	Zaporizka
None	52%	53%	53%	55%	61%
Winter clothes	12%	13%	18%	14%	18%
Fuel for heating	6%	6%	6%	8%	2%
Large kitchen appliances	13%	12%	12%	9%	4%
Hygiene products	9%	17%	12%	12%	9%

Education

Among HHs with children, potential change in the prevalence of Education needs from June 2024 to December 2024:

18%
MSNA

22%
Calibration

KEY DRIVERS

- Needs were mostly driven by **education disruption events**: intensified missile attacks (57%), displacement/evacuation/return (11%), home damage (9%), school damage (5%).
- 22% of households with children in the South, 20%, in the East, and 17% in the North reported that **war-related events disrupted the education of at least one child**.

GEOGRAPHY

Proportion of HHs with children by Education CCIA severity score and macroregion

The prevalence of needs was higher in the **South**, **East**, and **North** macro-regions.

Education

School attendance

Almost all (97%, n=2295) of school-age children were **attending school** in Ukraine, confirming 2024 MSNA findings.

The percentage of children not attending was much higher in **frontline oblasts**:

- **17%** of school-age **children in Donetska** were not attending school
- 11% of **children in Khersonska and Zaporizka** were not attending schools

Reasons for not attending school (n=76):

Learning modality

- Most of the children (54%) attended in-person schooling during the school year 2024-2025. 25% attended blended schooling, and 21% remote schooling.
- **Learning modalities** significantly vary by **macro-region and oblast**.

WASH

The prevalence of WASH needs remained stable compared to June 2024

26%
MSNA = 26%
Calibration

KEY DRIVERS

- **Drinking water quality issues:** 10% of households reported unacceptable water quality or relying on unimproved water sources.
- **Hygiene:** 7% had difficulties performing personal hygiene due to considerable challenges such as inadequate or unsafe space
- **Technical water access:** 7% had issues accessing technical water.

GEOGRAPHY

Proportion of HHs by WASH CCIA severity score and macroregion

CCIA: ● Severe ● Extreme ● Extreme+

Higher prevalence of WASH needs in the South, East, and Center.

WASH

Disruption to water supply

Interruptions in cold water supply lasting 3 hours or more were more common in **frontline oblasts** and the **South macroregion**, in line with 2024 MSNA findings:

- Reported by **38%** of households in **Donetska**, **37%** in **Khersonska**, and **28%** in **Mykolaivska**.

Technical water

- The majority of households nation-wide relies on tap water and protected well (common in the West and Center).
- Most households reported having enough water for technical needs.
- Khersonska, Kirovohradska, and Donetska** reported **higher than average issues with water access**, with 32%, 25% and 24% of the households reporting not having enough water to flush the toilets.

Drinking water: sources and quality

- Nearly all households in Ukraine (**97%**) used an **improved** drinking water source.
- Drinking water sources vary based on urbanity:**

- Drinking water quality was generally assessed **as good or very good** (prior treatment).
- Oblasts with higher proportions of households reporting water was bad or very bad were **Dnipropetrovska** (12%), **Kirovohradska** (10%), **Zaporizka** and **Khersonska** (9%).

Accountability to Affected Populations

Top 4 self-reported challenges

- **Insufficient income** and **health** were the most frequently reported challenges, aligning with MSNA data.
- **A smaller percentage reported protection concerns** (12%), compared to MSNA (32%).
- **Cash, healthcare, and food** were the preferred types of humanitarian assistance, aligning with MSNA
- **Access to fuel is a key winter need:** 22% of rural households reported preferring access to fuel for winter heating compared to 6%.

Top 5 preferred types of humanitarian assistance

Preferred assistance modalities

46%

Cash (one lump-sum payment)

14%

In-kind

11%

Cash (multiple smaller payments)

77%

of households reported being satisfied with the aid received. 6% reported dissatisfaction, comparable to MSNA.
