About ISMI & This Factsheet

The IDP Situation Monitoring Initiative (ISMI) is an initiative of the Camp Coordination and Camp Management (CCCM) Cluster, implemented by REACH and supported by cluster members.

Following a baseline assessment conducted at the end of 2016, weekly/bi-weekly data collection cycles were initiated. This factsheet presents an overview of reported inward and outward movements of IDPs from 1 to 15 May 2018. Such displacements were reported in 219 communities in sub-districts monitored by ISMI. The coverage map in this section shows the sub-districts that were monitored for the most recent round of data collection, as well as the communities reporting movements. ISMI monitoring coverage varies over time depending on access. Displacements are identified through an extensive key informant (KI) network, either from alerts initiated by KIs or from follow-up by enumerators. At least two KIs are interviewed in each assessed community, and collected information is further triangulated through other sources, including CCCM member data and humanitarian updates. This approach allows for regular updates on IDP movements at the community level across sub-districts monitored by ISMI in northwest Syria.

The data used for this product was collected, triangulated and verified based on submissions from ISMI's network and select CCCM cluster members following the ISMI methodology. Due to differences in methodology and coverage, figures presented in this output may differ from official CCCM Cluster or UNHCR data. All data is for humanitarian use only.
