About REACH Initiative

REACH facilitates the development of information tools and products that enhance the capacity of aid actors to make evidence-based decisions in emergency, recovery and development contexts. All REACH activities are conducted through inter-agency aid coordination mechanisms.

For more information, you can write to our in-country office: yemen@reach-initiative.org. You can view all our reports, maps and factsheets on our resource centre: **reachresourcecentre.info**, visit our website at **reach-initiative.org**, and follow us **@REACH_info**.

Introduction

The IDP Hosting Site Baseline Assessment aims to support targeting and response planning by humanitarian stakeholders, including authorities, UN agencies, and local and international non-governmental organisations (NGOs). It provides a baseline of key multi-sectoral indicators across IDP hosting sites in 20 governorates, based on data collected through interviews with key informants in each site. The baseline assessment will help to inform the site management support which will be offered to the local authorities and humanitarian actors in charge of IDP hosting sites, as well as the support which will be offered to IDPs to establish self-governance, community participation, and communication processes within IDP hosting sites.

The IDP Hosting Site Baseline Assessment is organised and supported by the Shelter / NFI / CCCM Cluster coordination team and cluster partners. The data collection for the baseline assessment was carried out by the International Organisation for Migration (IOM) in 12 governorates, the office of the United Nations High Commissioner for Refugees (UNHCR) in 4 governorates and ADO and SRA in the 4 remaining governorates.

Once the baseline of current sites is finalised, its updates will be carried out every six months to assess newly established sites. Monitoring of the sites identified through the baseline and its updates will also be carried out on a regular basis. The information generated over time through monitoring data collection will provide an indication of structural and sectoral changes in the conditions of the sites.

For the purposes of this assessment, REACH supports the Shelter / NFI / CCCM Cluster in data analysis and output production. The core outputs for this assessment include:

- 1. Summary report: Overview of key indicators and comparative analysis of sites to identify those in most urgent need;
- 2. Site Profiles: Produced for each site with relevant sectoral information;
- 3. Site Maps: Maps showing site location and characteristics.

This report presents findings from four governorates - Al Hudaydah, Al Mahwit, Hajjah, and Sana'a - based on data collected in July 2018 by IOM during the fourth phase of the baseline assessment. The first three phases of data collection took place in sixteen governorates, in June 2017, August 2017 and September/October 2017.

Methodology

The assessment was conducted in four stages across 20 governorates, in IDP hosting sites of five or more IDP households, where assistance and protection services can be delivered collectively. To identify sites, TFPM Area Assessments¹ and a Cluster site list have been used. Enumerators visited each site included on the Cluster Site List, and included the site in the assessment if it was found to meet the criteria of having five or more IDP families living there. The assessment covers both rural and urban settings and aims to assess every IDP hosting site in Yemen. However, new sites are being identified periodically, while some sites may no longer be present. Therefore, findings refer to identified sites, with new sites being added into or removed from later data collection rounds.

Data was collected through interviews with one to five key informants in each site. Key informants included site managers, members of site committee, sheikhs, mosque imams, community leaders, or in the absence of any formal leaders – randomly chosen IDP households, who responded on behalf of all households in the site. Consequently, findings reflect the informed perspectives of these key

The Task Force for Population Movement (TFPM),

Definitions

For the purpose of data collection, the Yemen Shelter / NFI / CCCM Cluster identifies each concentration of displaced population according to the following categories:

- **Location**: a populated place is the smallest geographical division: a neighbourhood in urban area and a village in rural area.
- Site: a location inhabited by five or more households regardless of its accommodation and shelter type. In cases of multiple housing units hosting five or more households each, having the same shelter type and sharing one basic service unit, a single data collection form shall be applied. Basic service units include latrines, water points or cooking facilities.
- Individual settlement: a population concentration hosting less than five households within one location (see above). Individual settlements are not included in this exercise.

Displacement sites are divided into two categories:

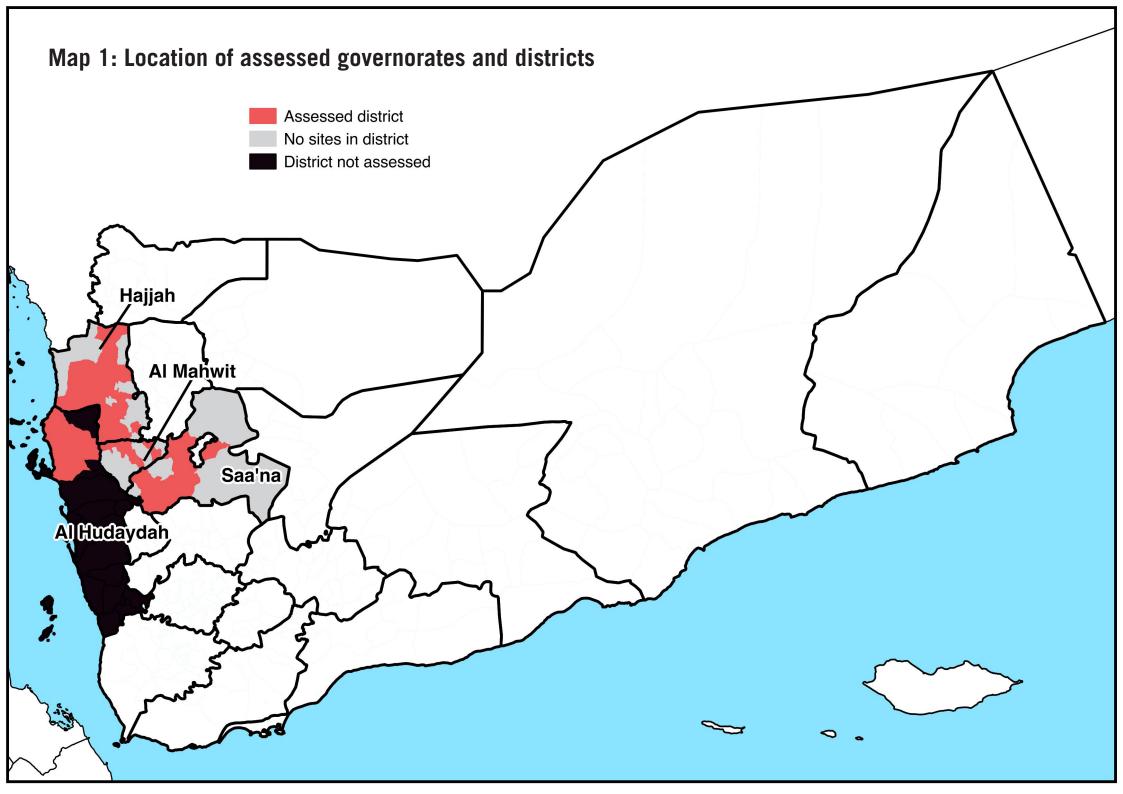

- **Collective Centre**: a displacement site in a pre-existing physical structure, either public/communal (e.g. public buildings, schools) or private buildings (e.g. factories, private houses) inhabited by five or more IDP households;
- **Spontaneous Settlement**: groups of tented or other types of housing units inhabited by five or more IDP households established by the IDPs themselves or by non-experienced actors on land they have no legal claim to. The IDPs intend to stay in this settlement for an extended period of time.

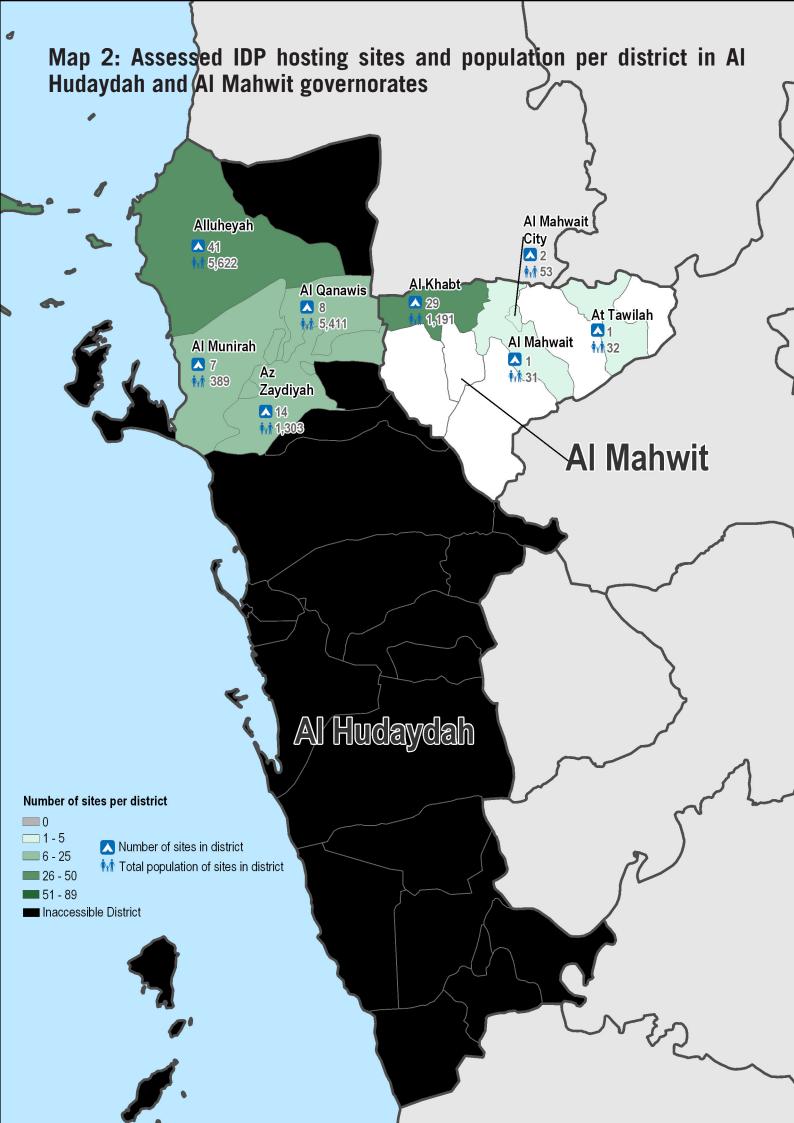

This report uses the following definitions for type and status of shelters present in displacement sites:

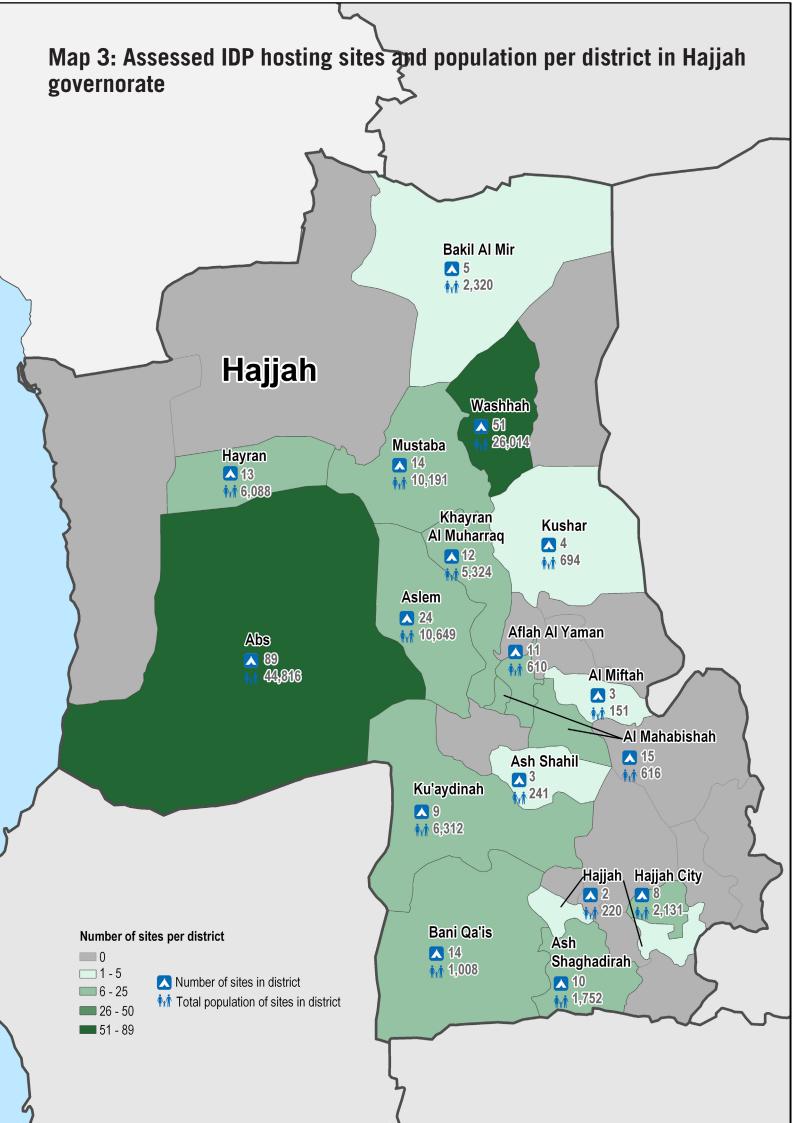

- Makeshift shelter: typically built from waste and temporary materials (tarpaulins, cardboard, blankets, metal sheeting, tarps, etc.);
- Emergency shelter: a portable shelter with a cover and a structure;
- Finished building: a building which is completed (with walls and roof) and composite of all building components (windows, doors, plumbing, etc.);
- **Unfinished building**: a building which has more than its frame, but is still missing elements (i.e. doors, windows, lighting, plumbing, walls, etc.);
- Skeleton: a building which has a solid frame (concrete, steel, etc.) but no other elements;
- Open air: no structure present.

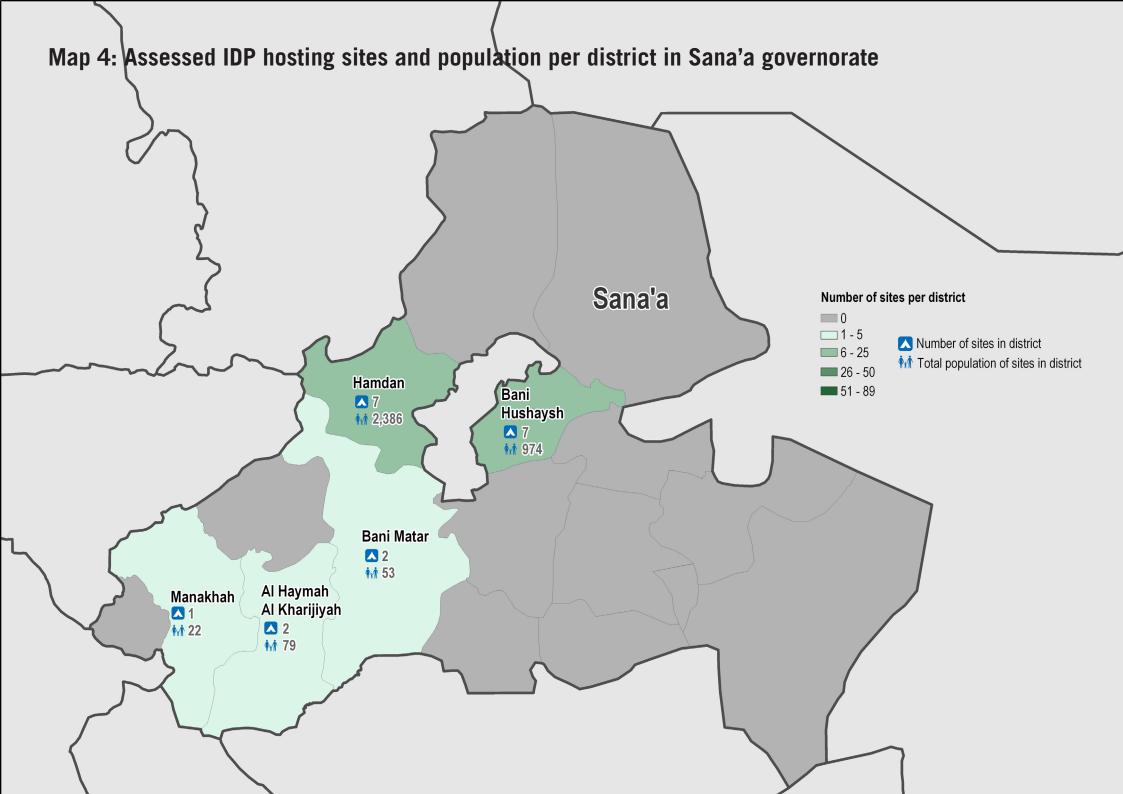

Other definitions:

- **Unhygienic facilities**: Facilities that are not sanitary and do not respect minimum standards of cleanliness or that may cause disease.
- **Functioning facilities:** Facilities that continue to fulfil the purpose for which they were constructed or provided.
- Private (site, services or facilities): Site belonging to, controlled by or for the use of one particular
 person, group of people, or commercial company only and not owned by or connected with the
 government. Services or facilities provided by a particular person, group of people, or commercial
 company.
- **Public (site, services or facilities)**: Site belonging to, controlled by, or for the use of the entire population rather than a particular individual/group. Services or facilities provided by the government.
