

SOMALIA SHELTER CLUSTER M&E FRAMEWORK

FULL INDICATOR MATRIX

Shelter Program Type	Needs	Baseline	Registration	Monitoring	Post Distribution Evaluation	Construction Monitoring	Post Construction Evaluation
NFI	% of households and individuals identified as in need of non-food items, in accordance with agency designated beneficiary selection criteria	% population, by vulnerable groups	Total number of household members by age and gender	Number/% of IDP households not able to access distribution points	Number/% of beneficiaries reporting a threat after the distribution	-	-
	% of households having received NFI assistance, by type	% of population with security concerns, by type	Number of household members with mental disabilities	Number/% of beneficiaries reporting a threat before, during or after the distribution	% of beneficiary households that report using distributed items as a means to address other needs	-	-
	% population, by vulnerable groups	% of population with access to NFIs, by type	Total number of pregnant or lactating women in the household	% of beneficiaries reporting access to and knowledge of a complaints mechanism	X time people had to wait in line for distributions	-	-
	% of households with access to water points, by type	% of population, by shelter typology	Place of origin	X time beneficiaries had to wait in line for distributions	Number/% of beneficiaries satisfied with the items distributed	-	-
	% of households with access to sanitation facilities within 50 meters of shelter, by type	Number of household members by age and gender	Number of household members that are temporarily ill	Number/% of host community households supported with non-food items meeting shelter standards defined by the cluster	% of complaint cases closed by implementing organizations with response provided to the complainer	-	-
	% of households with access to hygiene materials, by type	% of population, by reason for displacement	Number of unaccompanied children	Number/% of IDP households informed of the distribution beforehand	Number of persons/households/communities provided with training related to use and maintenance of non-food items	-	-

	% of households with access hygiene facility	% of population, by different settlement types	Number of household members in need of physical protection	Number/% of IDP households supported with non-food items meeting shelter standards defined by the cluster		-	-
	% of households that perceive they are unsafe	% of population, by place of origin	Name and gender of head of household			-	-
	% of population, by shelter typology	% of population by overall perceived security situation in settlement	Number of household members with physical disabilities			-	-
	% of households by frequency of water collection	% of population with access to a market	Phone number of head of household			-	-
	% of households by method of water collection	% of schools functioning	Current IDP settlement			-	-
	% of households by location of waste disposal	Number of households present in settlement, by type (e.g. host, IDP, etc.)	Number of household members with a chronic medical condition				
	% of households with access to educational facilities, by type	% of population with access to functioning basic services, by type				-	-
	% of households with school age children not attending school, by reason for non-attendance	Number of functioning health facilities					
	% of households indicating non-food item support as a priority need	% of population, by reason to end displacement					
	% of households reporting shelter issues, by type	% of population, by different land tenure agreements					
	% of households by shelter source	% of population paying rent, by modality					
	Number of displaced people by	Number of sanitation facilities, by type					

	region						
	% of households by materials used for shelter roof/walls/floor/internal structure	% of population using sanitation facilities, by type (communal, private)					
	% of households with lockable door	% of sanitation facilities lockable					
	Intentions of IDP households over X time, by intention type	% of non-functioning sanitation facility, by reason for non-functionality					
		% of water point typologies					
		% of non-functioning water points, by type					
		% of non-functioning water points, by reason for non-functionality					
		% of population, by population group type					
		% of health facility typologies, by managing entity					
		% of population with access to other services, by type					
		% of health facilities with access to water					
		% of health facilities with access to electricity					
		Number of health facility workers, by facility type					
		Number of schools					
		% of population, by timing of arrival in settlement					
		Number of classrooms					
		% of schools with access to					

		latrines					
		% of school latrines functioning					
		% of school latrines that are gender segregated					
		% of schools with access to other services, by type					
		Number of students attending, by school type					
		Number of markets					
		Number of kiosks					
		% of markets open after dark					
		Number of solar light posts					
		Number of community centers					
		Number of hygiene facilities, by type					
		% of population using hygiene facilities, by type (communal, private)					
		% of hygiene facilities lockable					
		% of non-functioning hygiene facility, by reason for non-functionality					
		% of community centers with activities, by type					
		Number of garbage collection points					
Emergency	% of households and individuals identified as in need of shelter assistance, in accordance with agency designated	% of population, by different land tenure agreements	Place of origin	Number/% of IDP households supported with emergency shelter items meeting shelter standards defined by the cluster	Number/% of beneficiaries reporting a threat after the distribution	-	-

	beneficiary selection criteria						
	% of households, by land tenure situation	Number of household members by age and gender	Phone number of head of household	Number/% of IDP households not able to access distribution points	% of beneficiary households that report using distributed items as a means to address other needs	-	-
	% of households having received shelter assistance, by type	% of population, by different settlement types	Current IDP settlement	Number/% of beneficiaries reporting a threat during the distribution	Number/% of beneficiaries reporting X problem related to their shelter assistance	-	-
	% population, by vulnerable groups	% of population with security concerns, by type	Number of household members with physical disabilities	% of beneficiaries reporting access to and knowledge of a complaints mechanism	Number/% of households that would re-use or recycle their shelter materials if they were to move elsewhere	-	-
	% of households with access to water points, by type	% of population, by reason for displacement	Number of household members with mental disabilities	X time people had to wait in line for distributions	% of population, by different land tenure agreements	-	-
	% households by materials used for shelter roof/walls/floor/ internal structure	% population, by vulnerable groups	Number of household members in need of physical protection	Number/% of host community households supported with emergency shelter items meeting shelter standards defined by the cluster	% of population with security concerns, by type	-	-
	% of households reporting shelter issues, by type	% of population, by shelter typology	Number of household members with a chronic medical condition	Number/% of IDP households informed of the distribution beforehand	% of population, by shelter typology	-	-
	% of households with access to sanitation facilities within 50 meters of shelter, by type	% of population with access to functioning basic services, by type	Total number of household members by age and gender		Number/% of beneficiaries satisfied with the items distributed	-	-
	% of households with access to	Number of households present in	Total number of pregnant or lactating women		Number/% of shelter incorporating	-	-

	hygiene materials, my type	settlement, by type (e.g. host, IDP, etc.)	in the household		measures to prevent/mitigate security risks, in particular gender-based violence		
	% of households by hygiene facility used	% of population with access to NFIs, by type	Name and gender of head of household		% of households without physical access to functioning markets	-	-
	% of households that perceive they are unsafe	Number of sanitation facilities, by type	Number of household members that are temporarily ill		Average plot area available per person/household	-	-
	% of population, by shelter typology	% of non-functioning water points, by type	Number of unaccompanied children		% beneficiary households reporting additional material inputs acquired through X means for construction of shelter		
	% of households by method of water collection	Number of functioning health facilities			Number of liters (average) of potable water available at the household level per X time	-	-
	% of households by frequency of water collection	% of schools functioning			% of complaint cases closed by implementing organizations with response provided to the complainer	-	-
	% of households with lockable door	% of school latrines functioning			Number of persons/households/communities provided with training related to use and maintenance of emergency shelter		
	% of households by shelter source	% of population with access to a market			Average time (minutes/hours) taken to reach X service/good/place of work		
	% of households by location of waste disposal	% of population, by population group type			% of shelter solutions incorporating accessibility measures for people with specific needs		
	% of households	% of population, by timing of			Number/% of water points		

	with access to educational facilities, by type	arrival in settlement			where the queuing time is longer than 30 minutes		
	% of households with school age children not attending school, by reason for non-attendance	% of population by overall perceived security situation in settlement			Number/% of households more than 50 meters from a latrine		
	Average cost of school fees	% of population, by reason to end displacement			Number/% of latrines with more than 20 people using them		
	% of households indicating shelter support as a priority need	% of population using sanitation facilities, by type (communal, private)			X time people had to wait in line for distributions		
	Number of displaced people by region	% of sanitation facilities lockable					
	Intentions of IDP households over next X time, by intention type	% of non-functioning sanitation facility, by reason for non-functionality					
		% of water point typologies					
		% of non-functioning water points, by reason for non-functionality					
		% of health facility typologies, by managing entity					
		% of population with access to other services, by type

		Number of hygiene facilities, by type					
		% of population using hygiene facilities, by type (communal, private)					
		% of hygiene facilities lockable					
		% of non-functioning hygiene facility, by reason for non-functionality					
		Number of community centers					
		% of community centers with activities, by type					
		Number of garbage collection points					
		% of population, by place of origin					
		% of population paying rent, by modality					

Transitional	% of households and individuals identified as in need of shelter assistance, in accordance with agency designated beneficiary selection criteria	Number of households present in settlement, by type (e.g. host, IDP, etc.)	Total number of household members by age and gender	-	-	Number/% of host community households supported with transitional shelter items meeting shelter standards defined by the cluster	Average plot area available per person/household
	% of households with lockable door	% of population, by place of origin	Current IDP settlement	-	-	Number/% of IDP households supported with transitional shelter items meeting shelter guidelines defined by the cluster	% of settlement plans developed with participation of shelter assisted population and relevant stakeholders
	% households by materials used for shelter roof/walls/floor/internal structure	% of population with access to functioning basic services, by type	Place of origin	-	-	Number/% of intended plots demarcated and allocated	% of households that report problems with the local community
	% of households reporting shelter issues, by type	% of population, by different settlement types	Number of households with problems related to tenure	-	-	Number/% of intended WASH infrastructure constructed	Number/% of beneficiaries reporting X problem related to their shelter assistance
	% of households having received shelter assistance, by type	% of population, by different land tenure agreements	Number of household members with physical disabilities	-	-	Number of security infrastructure installed per settlement	% households by materials used for shelter roof/walls/floor/internal structure
	% of households with access to water points, by type	% population, by vulnerable groups	Number of household members with mental disabilities	-	-	Number/% of affected population that has received information, training, or legal advice on HLP issues	% of households reporting access to livelihoods within/outside the settlement
	% of households with access to sanitation facilities within 50 meters of shelter, by type	% of population, by reason to end displacement	Number of household members with a chronic medical condition	-	-	% of target households in need of land records/titles/property title/deed/land agreement that have been issued one	Number/% of households that would re-use or recycle their shelter materials if they were to move elsewhere

	% of households with access to hygiene materials, by type	% of population, by shelter typology	Phone number of head of household	-	-	Number/lengths of bridges and roads constructed in target settlement	Number of shelters per plot
	% of households by hygiene facility used	% of population with security concerns, by type	Total number of pregnant or lactating women in the household	-	-	Number of persons/households/communities provided with training related to use and maintenance of transitional shelter	Use of plot, by type
	% of households with school age children not attending school, by reason for non-attendance	Number of household members by age and gender	Name and gender of head of household	-	-	Number/% of shelter incorporating measures to prevent/mitigate security risks, in particular gender-based violence	% of households without physical access to functioning markets
	% of households that perceive they are unsafe	% of population, by reason for displacement	Number of household members in need of physical protection	-	-	% of beneficiaries reporting access to and knowledge of a complaints mechanism	Number/% of beneficiaries satisfied with their transitional shelter
	% of households, by land tenure situation	Number of students attending, by school type	Number of household members that are temporarily ill			Number of vouchers distributed	% of population with access to functioning basic services, by type
	% of population, by shelter typology	Number of markets	Number of unaccompanied children	-	-	Number of households with proof of voucher	% of population, by different settlement types
	Average distance of educational facilities from IDP households	% of population paying rent, by modality		-	-	Number of trainings conducted on durable land management practices	% of population, by different land tenure agreements
	% of households by location of waste disposal	Number of schools		-	-	% of target population reached by training/information campaigns on durable land management practices	% of population with security concerns, by type
	% of households with school age children attending	% of schools functioning		-	-	Number of trainings/information campaigns conducted on HLP issues	% of population, by shelter typology

	school, by type of school						
	Average cost of school fees	% of population with access to NFIs, by type		-	-	Number of training sessions on livelihoods skills provided to target population	Number of household members by age and gender
	% of households indicating shelter support as a priority need	Number of functioning health facilities		-	-	% of target population attending training sessions on livelihoods skills	Number/% of households reporting to be the original owners of the plot and structure
	% of households by shelter source	% of population using sanitation facilities, by type (communal, private)		-	-	Number/% of intended social infrastructure created	Average time (minutes/hours) taken to reach X service/good/place of work
	% of households by method of water collection	% of sanitation facilities lockable		-	-	Number of information campaigns conducted to inform target groups about disaster risk reduction	Number/% of targeted households that feel secure on their land
	% of households by frequency of water collection	Number of community centers		-	-	Number of training sessions provided to stakeholders (beneficiaries, local authorities, host community) on the construction process	Monetary cost (Somali Shillings) to purchase or use water, education, health services, or other social asset in X time
	% of households with access to educational facilities, by type	% population using water facilities, by type		-	-	Number/% of shelters with individual WASH facilities	Number/% of households more than 500 meters from the nearest water point
	Intentions of IDP households over next X time, by intention type	% of community centers with activities, by type		-	-	Number of classrooms constructed/rehabilitated and furnished	Number/% of water points where the queuing time is longer than 30 minutes
		Number of garbage collection points		-	-		Number/% of households more than 50 meters from a latrine
		% of non-functioning water points, by type		-	-		Number/% of latrines with more than 20 people using them
		% of non-functioning		-	-		% of beneficiary children enrolled

		water points, by reason for non-functionality					in primary or secondary school
		% of health facility typologies, by managing entity		-	-		Number/% of households reporting plot size adequate to expand shelter
		% of population with access to other services, by type		-	-		Average distance traveled to collect fuel % of camp-type settlements with firebreaks in accordance with standards % beneficiary households reporting additional material inputs acquired through X means for construction of shelter % of households with separated spaces within shelter % of households with proof of voucher
		% of health facilities with access to water		-	-		
		% of health facilities with access to electricity		-	-		
		Number of health facility workers, by facility type		-	-		
		Number of sanitation facilities, by type		-	-		
		% of non-functioning sanitation facility, by reason for non-functionality		-	-		% of settlements with functioning IMS
		Number of classrooms		-	-		Number/% of households using functioning social assets and infrastructure on an X basis (weekly, monthly)
		% of schools with access to latrines		-	-		Number/% of trained beneficiaries adopting maintenance skills
		% of school latrines functioning		-	-		Number of maintenance projects carried out by the community

		% of school latrines that are gender segregated		-	-		Average distance traveled to access livelihood source
		% of schools with access to other services, by type		-	-		% change (increase/decrease) in tree/grass coverage over X time
		% of population by overall perceived security situation in settlement					Number of liters (average) of potable water available at the household level per X time
		Number of kiosks					% of shelter solutions incorporating accessibility measures for people with specific needs
		Number of hygiene facilities, by type					% of complaint cases closed by implementing organizations with response provided to the complainer
		% of population using hygiene facilities, by type (communal, private)					Change in population density over time (sq m/person)
		% of hygiene facilities lockable		-	-		Number change in average meters available between shelters after time X
		% of non-functioning hygiene facility, by reason for non-functionality		-	-		Change in common/public space (sq m) available to community members after time X
		% of markets open after dark		-	-		Number/% of camp-type settlements that have been selected respecting criteria for surface water drainage
		Number of solar light posts		-	-		Number/% of beneficiaries provided with training on settlement

							planning
		% of solar light posts functioning, by managing entity		-	-		
		% of community centers with access to latrines					
		% of population, by population group type		-	-		
		% of population, by timing of arrival in settlement					
Permanent	% of households and individuals identified as in need of shelter assistance, in accordance with agency designated beneficiary selection criteria	Number of households present in settlement, by type (e.g. host, IDP, etc.)	Total number of household members by age and gender	-	-	Number/% of shelter incorporating measures to prevent/mitigate security risks, in particular gender-based violence	Number/% of beneficiaries satisfied with their permanent shelter
	% households by materials used for shelter roof/walls/floor/internal structure	% of population, by place of origin	Current IDP settlement	-	-	% of beneficiaries reporting access to and knowledge of a complaints mechanism	Average plot area available per person/household
	% of households having received shelter assistance, by type	% of population with access to functioning basic services, by type	Place of origin	-	-	Number/% of intended plots demarcated and allocated	Number/% of households reporting plot size adequate to expand shelter
	% of households with lockable door	% of population, by different settlement types	Claims to tenure	-	-	Number/% of intended WASH infrastructure constructed	% of settlement plans developed with participation of shelter assisted population and relevant stakeholders
	% of households, by land tenure situation	% of population, by different land tenure agreements	Number of household members with physical disabilities	-	-	Number of classrooms constructed/rehabilitated and furnished	% of households that report problems with the local community

	Intentions of IDP households over next X time, by intention type	% population, by vulnerable groups	Number of household members with mental disabilities	-	-	Number of security infrastructure installed per settlement	Number/% of beneficiaries reporting X problem related to their shelter assistance
	% of households reporting shelter issues, by type	% of population with security concerns, by type	Number of household members with a chronic medical condition	-	-	Number of trainings conducted on durable land management practices	Use of plot, by type
	% of households with access to water points, by type	% of population, by reason to end displacement	Phone number of head of household	-	-	% of target population reached by training/information campaigns on durable land management practices	Number/% of trained beneficiaries adopting maintenance skills
	% of households with access to sanitation facilities within 50 meters of shelter, by type	% of population, by shelter typology	Total number of pregnant or lactating women in the household	-	-	Number of trainings/information campaigns conducted on HLP issues	% of households reporting access to livelihoods within/outside the settlement
	% of households with access to hygiene materials, by type	Number of household members by age and gender	Name and gender of head of household	-	-	Number/% of affected population that has received information, training, or legal advice on HLP issues	% households by materials used for shelter roof/walls/floor/internal structure
	% of households by hygiene facility used	% of population, by reason for displacement	Number of household members in need of physical protection	-	-	% of target households in need of land records/titles/property title/deed/land agreement that have been issued one	% of households with separated spaces within shelter
	% of households with access to educational facilities, by type	% population using water facilities, by type	Number of household members that are temporarily ill	-	-	Number/lengths of bridges and roads constructed in target settlement	Number of shelters per plot
	% of households with school age children not attending school, by reason for non-attendance	% of population, by timing of arrival in settlement	Number of unaccompanied children	-	-	Number/% of intended social infrastructure created	% of households without physical access to functioning markets

	% of households that perceive they are unsafe	Number of community centers		-	-	Number of persons/households/communities provided with training related to use and maintenance of permanent shelter	% of population with security concerns, by type
	% of population, by shelter typology	% of population paying rent, by modality		-	-	Number/% of IDP households supported with permanent shelter items meeting shelter guidelines defined by the cluster	% of population, by shelter typology
	% of households with school age children attending school, by type of school	% of solar light posts functioning, by managing entity		-	-	Number/% of host community households supported with permanent shelter items meeting shelter standards defined by the cluster	% of population, by different settlement types
	Average cost of school fees	% of population with access to NFIs, by type		-	-	Number of vouchers distributed	% of population with access to functioning basic services, by type
	% of households indicating shelter support as a priority need	Number of sanitation facilities, by type		-	-	Number of households with proof of voucher	% of population, by different land tenure agreements
