Water, Sanitation and Hygiene Follow-up Assessment Monsoon Season (August - October 2018)

Camp 1W, Ukhia Upazila, Cox's Bazar District, Bangladesh

Ø Overview & Methodology

WASH Sector Cox's Bazar

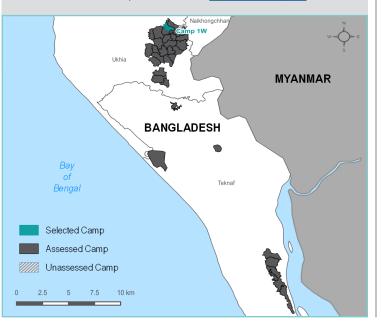

Since August 2017, an estimated 727,000 Rohingya refugees have arrived in Bangladesh's Cox's Bazar District from Myanmar, bringing the total number residing in Bangladesh to approximately 921,000.¹ The unplanned and spontaneous nature of the post-August Rohingya refugee camps have combined with high population densities and challenging environmental conditions to produce a crisis with especially acute water, sanitation and hygiene (WASH) needs.

In April 2018, REACH undertook a WASH household assessment in the framework of the Cox's Bazar WASH Sector with UNICEF support, which established a baseline for WASH conditions and perceptions amongst Rohingya refugee communities in Cox's Bazar District. Between August and October 2018, REACH undertook this follow-up assessment, taking the form of a household survey covering 33 out of the 34 Inter Sector Coordination Group-recognised camps, with Kutupalong RC the only exception due to ongoing security concerns. Due to issues surrounding access, enumerators were able to access some of the camps only intermittently between 12 and 26 September 2018.

This follow-up assessment aims to understand changing WASH conditions across the Rohingya refugee camps since April 2018, and where possible understand the impact of the monsoon season, to inform priority areas and types of humanitarian programming. Results of this follow-up assessment are generalizable at the camp level with a 95% confidence level and a 10% margin of error. The method of identifying heads of households as primary respondents in the baseline survey resulted in a low proportion of female respondents. To address this limitation, this follow-up survey required enumerators to interview refugees of the same gender only. As a result, menstrual hygiene indicators are not included in camp-level factsheets, due to an insufficient number of females having been interviewed to yield generalizable results, however these indicators are included in the all-camp summary factsheet. This factsheet presents an analysis of data collected within Camp 1W, where 117 households were surveyed,² as well as an indicator comparison table displaying changes in WASH conditions between the baseline and follow-up assessments.

Enumerator training took place prior to the start of data collection, including sessions on testing for residual chlorine run by the Centre for Disease Control, as well as Prevention of Sexual Exploitation and Abuse (PSEA) run by UNHCR. Support for questionnaire translation from English to Rohingya language and enumerator language training was provided by Translators Without Borders.

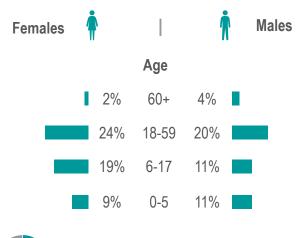

As part of this assessment, 33 camp-level factsheets and one all-camps summary factsheet display key findings from the survey. All REACH products, including those related to the baseline assessment, are available on the <u>REACH Resource</u> <u>Centre</u>. In addition, all datasets are available on <u>Humanitarian Data Exchange</u>, while all factsheets and maps are available on HumanitarianResponse.

Demographics

Population in camp (individuals) ³	40,648
Population in camp (families) ³	9,381
Average age of respondent	38
Average household size	5

Composition of surveyed households

38% of respondents were female

30% of heads of households were female

51% of households with at least one child under 5 years old

% of households reporting different levels of overall satisfaction with water, sanitation and hygiene

Very satisfied	4%	1 - C
Satisfied	71%	
Unsatisfied	25%	
Very unsatisfied	0%	

¹Inter Sector Coordination Group Situation Report Data Summary (27 September, 2018). See: https://bit.ly/2D36vx5

²Please note that 3 surveys from Camp 1W contained water container measurement outliers and were excluded from data analysis, to avoid skewing data. This did not affect the confidence level for Camp 1W.

³Due to relocations of refugees to extension camps occurring at the time of assessment, population numbers for Camp 4 Extension and Camp 20 Extension were derived from the UNHCR Family Counting August 15, 2018 dataset, while population numbers for the remaining 31 camps surveyed were derived from the July 15, 2018 dataset. This assessment considers a household a 'family' as defined in the UNHCR Family Counting dataset.

-II Indicator Comparison Table: Baseline (April 2018) & Follow-up (August - October 2018) Assessments

The following table displays a comparison of findings from the REACH WASH Household Baseline (April 2018) and Monsoon Follow-up (August - October 2018) assessments, showing changes in WASH conditions within Camp 1W in Cox's Bazar District, Bangladesh. The table identifies the recognised WASH monitoring frameworks from which indicators were adopted in designing the assessments, highlighting indicators reportable across muliple frameworks where applicable.

	L	Monito	Monitoring frameworks	eworks		REACH WASH	REACH WASH Household Data
Indicators	Cox's Bazar WASH Sector	Global WASH Cluster	Aohingya Response Joint Response Plan	SDG Joint Monitoring Program	SPHERE Indicators	Baseline	Monsoon Follow-up
Water							
% of households with access to an improved ¹ water source for drinking	>	>	>	>	>	66%	100%
% of households with access to an improved' water source for other purposes (i.e. cooking and cleaning)	>	>	>	>	>	%66	100%
% of households accessing an adequate/sufficient quantity of water ²³ - drinking water = 3 litres/person/day - all domestic water = 15 litres/person/day	>>				>>		94% 53%

% of households that practice household water treatment	>	>			>	13%	26%
							Colour Key: Green = postine change from baseline Orange = no change from baseline Red = megative change from baseline Grey = not assessed in baseline
Footnotes: Cox's Bazar WASH Sector standard for improved water sources: piped water into settlement site/public tap/standpipe, tubewell/borehole/handpump, protected dugwell, protected sping, rainwater collection, bottled water, cart with small tank/drum, water tank	ollection, bottled wat	er, cart with small t	ank/drum, water tan	~			

*SPHERE standard for sufficient quantity of water: drinking water = 2.5 - 3 litres/person/day; drinking and non-drinking water combined: 15 litres/person/day

Water quantify data from the baselie survey is not included in this comparison table due to limitations resulting from the method of estimating water capacity through enumerators' observation of water containents within households. Water quantity data from the follow-up

survey is included due to the more reliable method used of enumerators measuring each water container within the household with a tape measure to determine approximate litre capacity of drinking and non-drinking water.

water source. Additional monitoring frameworks have been toked as they contain indicators that may be reported on by using the same findings from the baseline and/or follow-up surveys, as follows: Global WASH Clustent: % of households with access to a source of safe water; Source and indicators that may be reported on by using the same findings from the baseline and/or follow-up surveys, as follows: Global WASH Clustent; So thouseholds with access to a source of safe water; Source and safe water; Sources; Rohingia Response DRPS: # of fourseholds with access to a source of safe water; Source of safe water sources; Rohingia and sources; Rohingia and sources; Rohingia and source and safe water is used for drinking and cooking. As such assessment findings may be aggregated to the fire listed monitoring frameworks. The same principle applies to all common indicators. Please note: Indicates is elentified as reportable across multiple monitoring frameworks are worded primarily as per Cox's Bazar WASH Sector indicators (with access to an indicator section and and in the same works or indicators with additional monitoring frameworks containing similar indicators with a cost section are indicators with access to an indicator section are indicators with access to an indicator section are indicators are worded primarily as per Cox's Bazar WASH Sector indicators with access to an indicator section are indicators are worded primarily as per Cox's Bazar WASH Sector area are indicators are indicators are indicators are indicators are indicators are indicator are indicators are indicators are indicator are indicators are indicators are indicators are indicators are indicators are indicators are indicator are indicators are
