

South Sudan: Humanitarian Situation Monitoring, June-July 2024 – Unimproved water sources

Proportion of assessed settlements where key informants reported unimproved water sources as the main drinking sources

Production date: 30 Nov 2024

**Methodology**  
The Area of Knowledge (AoK) assessment is conducted every quarter using a structured survey with Key Informants (KIs) who have arrived from, recently visited, or received regular information from a settlement. All data was aggregated at the settlement level, and settlements were assigned the modal or most credible response. When no consensus was reached regarding a settlement, the report did not include that settlement.

To limit biases in sampling, Payam quota sampling was employed to ensure a geographic spread of settlements across and increase geographical representativeness. Data is displayed for counties that reached interview coverage of at least 10% of all settlements per county.<sup>ii</sup>

The data collection took place between the 06th of June and the 3rd of July 2024, and a total of 4,359 KIs were interviewed in 3,398 settlements across South Sudan.

Furthermore, findings are not generalizable and should be considered indicative of the situation in assessed areas unless specified otherwise.

- i. Payam is the administrative unit below the county-level.
- ii. To calculate the percentage of AoK coverage, the total number of settlements per county is based on OCHA settlement lists in addition to new settlements mapped by KIs reached each month.

**Unimproved water sources**

- Unprotected well
- Traditional dug well
- Unprotected natural spring
- Surface water

- County Capital
- Assessed Settlements
- No or Low Coverage
- 0%
- 1-20%
- 21-40%
- 41-60%
- 61-80%
- 81-100%
