REACH An initiative of
IMPACT Initiatives
ACTED and UNOSAT

About REACH Initiative

REACH facilitates the development of information tools and products that enhance the capacity of aid actors to make evidence-based decisions in emergency, recovery and development contexts. All REACH activities are conducted through inter-agency aid coordination mechanisms.

For more information, you can write to our in-country office: iraq@reach-initiative.org. You can view all our reports, maps and factsheets on our resource centre: reachresourcecentre.info, visit our website at reach-initiative.org, and follow us [@REACH_info](https://twitter.com/REACH_info).

Methodology and Background

There has been renewed displacement in Iraq since January 2014, with escalated clashes between armed groups and the Iraqi government originating in Anbar and spreading into northern and central Iraq. An estimated 3.2¹ million people have now been internally displaced, with 305,401 individuals registered to be living in 49 open formal camps across Iraq². To monitor these camps comprehensively and inform a more effective humanitarian response, the CCCM Cluster and REACH Initiative (REACH) conduct Quarterly IDP Camp Profiling that aims to provide regular, updated information on developments, needs, and gaps in all accessible IDP camps across Iraq.

This CCCM Quarterly IDP Camp Profiling round (Round IV) was conducted in December 2015, during which 36 formally recognized IDP camps across Iraq were assessed³. Findings have been presenting in Camp Profiles and comparative analysis as part of this Quarterly overview. Prior to this release, the CCCM and REACH conducted three rounds of IDP Camp Profiling and mapping - in October 2014, January 2015, and September/October 2015. Unless mentioned otherwise this

cover document and accompanying camp profiles will present findings from December 2015.

A mixed-method research methodology was used which incorporates household-level sampling in each assessed IDP camp, Key Informant Interviews (KIIs) with camp managers, satellite imagery analysis, and participatory mapping. Household data collection took place during 8-31 December 2015. All household-level sampling was conducted with 95% level of confidence and 10% margin of error at the camp level, while analysis at the governorate-level was weighted according to the population sizes of camps.

Point-based sampling was applied in the field, where a grid of points was generated across the camp from which points were randomly selected using GIS technology. These generated sampling maps were then provided to the teams, whereby trained enumerators selected the nearest household to each point to be interviewed. Findings were subsequently contextualized and triangulated through KIIs with camp managers, participatory mapping, and satellite imagery analysis.

¹ Iraq Displacement Tracking Matrix (DTM) – January 2016

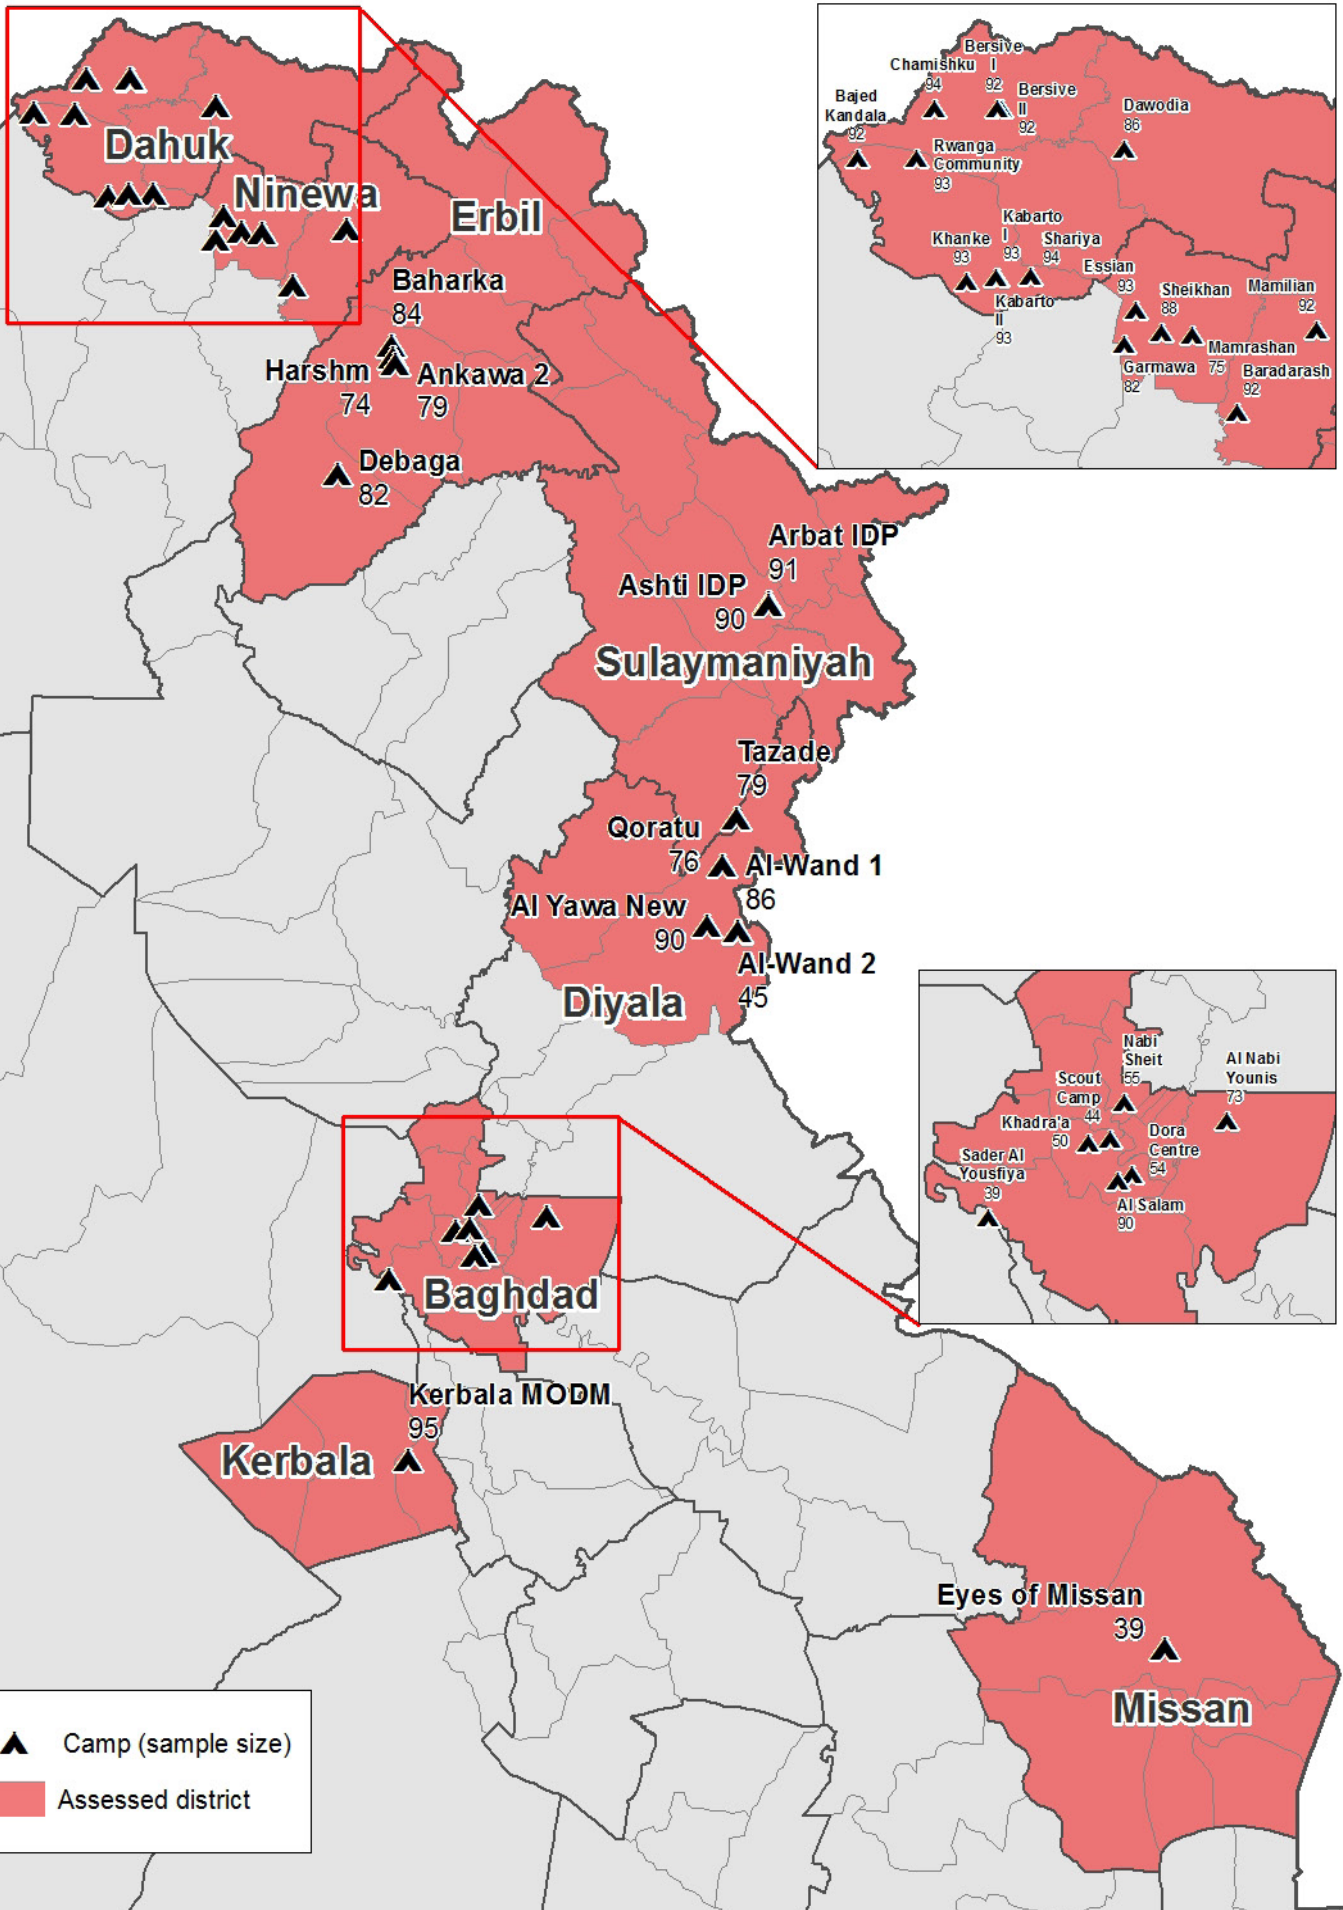

² Iraq CCCM Settlement Status Report – January 2016

³ 7 camps were assessed for the first time during this profiling.

IDP Camp Locations and Sample Size

▲ Camp (sample size)
 Assessed district

EXECUTIVE SUMMARY

Demographics

The majority of households were displaced from their area of origin around July-September 2014. The average time between displacement from the area of origin and arrival to current location was 160 days, though there were differences between governorates: the least amount of time was in Dahuk (121 days) while the most was in Kerbala (374 days).

Figure 1 - Demographic Breakdown

Camp Coordination and Camp Management

Gaps in safety programming were found across the camps where at least half of households in all governorates reported no known fire extinguisher in the camp and 23% of households reported exposed or broken electrical cables in their shelter. Awareness of an IDP committee in the camp was reported by 95% of households. However, households were less aware when asked about representativeness of the IDP committee: only 31% of households reported that the IDP committees in their camp had elected officials and 18% reported female representation. In terms of access within the past month, restrictions to entering and exiting the camp during daylight was reported by 6% of households. Diyala and Missan had the highest

percentage of households reporting restrictions at 72% and 21%, respectively.

Protection

Protection concerns remain widespread, particularly in terms of access and documentation: access to Child Friendly Spaces (CFS) was reported by 41% of households, with the lowest access to CFSs reported in Kerbala (0%), Missan (10%), and Sulaymaniyah (10%). There was a large range in the percentages of households missing documentation – between 3% in Sulaymaniyah and 38% in Missan. Erbil had the largest increase in missing civil documentation – 5% in Round III¹ and 20% in Round IV.

Food Security

Despite high Food Consumption Scores², the use of coping strategies was reported by 42% of households. Of those who reported coping strategies, the most commonly reported coping strategy was the consumption of cheaper food of lesser quality (58%). The vast majority of households (85%) reported access to Public Distribution System (PDS) in the three months prior to the assessment, but reported access was particularly low in Erbil (19%) and Diyala (43%). Overall, very few households (1%) reported not being able to access to a market within walking distance, though there was a clear difference for three camps in Baghdad reported much higher rates: Kadhra (28%), Sader Al Yousifiya (28%), and Nabi Sheit (13%).

Livelihoods and Social Cohesion

Limited access to livelihoods was underscored by the percentage of households who reported being entirely economically inactive (17%). The majority

¹ September and October 2015.

² A measure of the frequency of consumption and the nutritional value of food consumed. For the MENA region, including Iraq and Syria, WFP interprets an FCS score of 28 or under to indicate a poor food consumption profile; a score from 28.1 through 42 to be borderline; and an FCS score above 42 to indicate an acceptable food consumption profile of food security.

of households reported relying primarily on aid as reflected in responses given for the three primary sources of livelihoods: humanitarian aid (44%), governmental aid (27%), and casual unskilled labor (25%). A household's ability to engage in livelihoods activities, beyond receiving aid, was linked to access to a higher income and lower reported rate of livelihood coping strategies.

Shelter and Non-Food Items

Shelter and NFI needs were impacted by the end-of-year flooding and the arrival of winter: 15% of households reported experiencing flooding in the three months before the assessment, most commonly in Baghdad (79%), Diyala (41%), Kerbala (46%), and Erbil (36%). The ability of IDP households to financially support shelter renovations, including potential flood repairs, was limited by household earnings, with higher-income households more likely to invest in shelter improvements. The vast majority (85%) of households reported to have received winterization assistance within the past year – with the lowest proportion in Baghdad (45%).

WASH

Service gaps in water and sanitation were widespread throughout IDP camps in Iraq: 5% of all households reported going without access to water for at least one 24-hour period in the past month, with the highest rates seen in Erbil and Kerbala (42% each). Waste disposal was most commonly through collection (66%) or communal bins (33%). However, throwing waste in the street was reported by 28% in Missan and 6% in Chamishku (Dahuk governorate) while burning waste was reported by an additional 23% of households in Missan.

Health

Low reported access to healthcare supplies and treatment were highlighted this round, as seen by the 37% of households reporting access to a consistent supply of essential medicine for

pregnant, lactating, chronically ill, and/or disabled members. Moreover, camps in the central southern governorates reported even lower rates – 12% in Kerbala, 13% in Baghdad, and 27% in Diyala. There was also a large range in the self-reported access to obstetric and/or antenatal care – between 41% in Baghdad and 100% in Missan.

Education

The number of children reported to attend formal education inside camps was relatively low - 67% for boys and 62% for girls. However, it was reported that 78% of both boys and girls attended informal education inside the camps. Reasons for non-attendance for formal schools were mixed across governorates; however, central-southern governorates were more likely to report the inability to pay for tuition.

Comparative Sector Overview, by Governorate and Camp

Summary

This profile provides an overview of conditions in Al Nabi Younis camp. Primary data was collected through household surveys on 29/12/2015. Households were randomly sampled to a 95% confidence and 10% margin of error, based on population figures provided by CCCM. In some cases, additional information from camp managers has been used to support findings. Round III of data collection was in October 2015.

Summary

This profile provides an overview of conditions in Dora Center camp. Primary data was collected through household surveys on 22/12/2015. Households were randomly sampled to a 95% confidence and 10% margin of error, based on population figures provided by CCCM. In some cases, additional information from camp managers has been used to support findings. Round III of data collection was in September 2015.

Summary

This profile provides an overview of conditions in Arbat IDP camp. Primary data was collected through household surveys on 14/12/2015. Households were randomly sampled to a 95% confidence and 10% margin of error, based on population figures provided by CCCM. In some cases, additional information from camp managers has been used to support findings. Round III of data collection was in September 2015.

Camp Overview

of individuals: 8600
of households: 1611
Date opened: 9/4/2014
Accommodation: 1600
Ongoing extension: no
Planned capacity: 0
Camp area: 0.44 km²
