Joint Multi-Cluster Needs Assessment: Xudun District Profile

Sool Region, Somalia

Background

The ongoing drought has contributed to a rapid deterioration of the humanitarian context in Somalia, with a predicted high risk of famine in 2017. In support of the humanitarian planning response, the Clusters and the Assessment Working Group developed the Joint Multi-Cluster Needs Assessment (JMCNA) with the support of REACH in order to assess needs and access to basic services in Somalia.

The Somalia population was sampled for statistical representativeness at the district level with a confidence level of 90% and a margin of error of +/- 10%, employing a cluster sampling approach using the Population Proportional to Size method with replacement. Data collection was conducted by AAHI, ACF, ACTED, ADESO, Aid Vision, CARE, DBG, DRC, Galmudug MoH, HINNA, INTERSOS, IOM, NRC, PAH, REACH, SADO, SCI, SHARDO and SI.

This factsheet presents an analysis of data collected in Xudun District between 12 and 18 August 2017 as part of the JMCNA. In total, 149 households were surveyed across Xudun District.

1/1 **Demographics**

Household composition, by gender and age:

3%

of households reported that they are not from the community they currently reside in.

Food Security , y

Food Consumption Scores (FCS) of households:

9% Acceptable 22% Borderline 69% Poor

Coping Strategies Index (CSI) scores of households³:

0	Minimum score
13	Average score
42	Maximum score

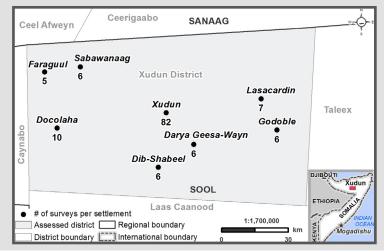

Reported challenges experienced by households when attempting to access food over the past three months²:

Lack of resources to buy food	60%	
Lack of food items available to purchase	20%	
Lack of cooking utensils	10%	
Lack of cooking fuel	13%	
None of the above	32%	

days on average that households' food stocks will reportedly 4.2 last.
