

The Food Consumption Score (FCS) is a measure of the frequency of consumption and the nutritional value of food consumed. A household's consumption of different food groups in a given week is converted into a score based on their nutritional value and organised into three categories. In South Sudan, food consumption scores are calculated using the following thresholds: poor (0-21); borderline (21.5-35); and acceptable (over 35)

Services

- UNHCR Office
- NGO
- Health Centre
- Market
- School

Food consumption score

- < 21.5 - Poor
- < 35.5 - Border line
- > 35.5 - Acceptable

Administrative

- Camp area
- Road
- Village
