

AREA BASED ASSESSMENT

Baashiqra Town, Ninewa Governorate
May 2018

SHELTER

In order to inform recovery and stabilization programming, REACH Initiative launched an Area Based Assessment (ABA) in Baashiqra town. In focusing assessments at the settlement level, the ABA seeks to provide a tailored and actionable profile of the assessed area, with a specific focus on demographics, household-level needs, and access to critical public services. As a component of this assessment, REACH conducted 494 household interviews as a representative sample of the town, resulting in a 97% confidence level and 5% margin of error. The sample was drawn using a grid-based, point sampling technique, where random GPS points were drawn across all residential areas of the town. All data collection was conducted by REACH enumerators between 18-30 January, 2018.

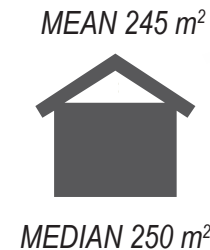

Baashiqra Town

Reported shelter type

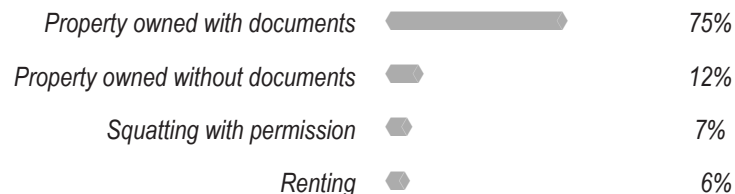

Mean and median reported shelter size

Proportion of households reporting some level of damage to their shelter

Most commonly reported occupancy status

Proportion of renting households with a written contract

Proportion of households reporting fear of eviction or having been threatened with eviction in the 90 days prior to data collection
