About the ES/NFI Cluster

The Emergency Shelter and Non-Food Items (ES/NFI) Cluster supports the provision of basic lifesaving services by coordinating the delivery of emergency, transitional, and permanent shelter solutions, as well as winterization assistance. This helps to mitigate further protection risks and allows for safer and more dignified living conditions. The ES/NFI Cluster supports these efforts through the development of tools, management of assessments, and development of coordinated strategies to improve cooperation between humanitarian organization and government entities.

For more information please visit the [Shelter Cluster Website](https://sheltercluster.org) or contact the ES/NFI Cluster directly at: coord.afghanistan@sheltercluster.org

About REACH

REACH is a joint initiative of two international non-governmental organizations - ACTED and IMPACT Initiatives - and the UN Operational Satellite Applications Programme (UNOSAT). REACH's mission is to strengthen evidence-based decision-making by aid actors through efficient data collection, management and analysis before, during and after an emergency. By doing so, REACH contributes to ensuring that communities affected by emergencies receive the support they need. All REACH activities are conducted in support to and within the framework of inter-agency aid coordination mechanisms. For more information please visit our website: www.reach-initiative.org.

For more information, please visit the [REACH Resource Centre](https://reach-initiative.org/reach-resource-centre) or contact REACH directly at: geneva@reach-initiative.org and follow REACH on Twitter [@REACH_info](https://twitter.com/REACH_info)

Introduction

Background

Following widespread conflicts, drought, and economic crisis across Afghanistan in 2021, the country continues to grapple with a widespread displacement crisis, driven by both years of conflicts, failed harvests, and a rapidly worsening economic situation. According to the United Nations Office for the Coordination of Humanitarian Affairs (UNOCHA)¹, over 736,000 Internally Displaced Persons (IDPs) were displaced in 2021 alone, leading to an estimated total of 3.4 million people displaced in Afghanistan by the end of 2022. Many of these IDPs have reportedly settled in provincial centres and other urban areas, putting strain on already fragile labour markets and essential services, including electricity, water, shelter, and access to sanitation.

Current reports suggest that these displacement trends may continue to worsen; a report by ACAPS published on March 2022 noted that a second severe drought in four years also continues to threaten the livelihoods of more than 7.3 million rural Afghans, while unemployment and cash shortages are threatening the livelihoods of people in urban centres, including many formerly middle-class households.²

According to UNOCHA¹, the Whole of Afghanistan Assessment conducted in 2021 informs that 31% of households impacted by conflict have been lost or severely damaged their shelters. As of the same source, 75% of households needed shelter assistance in 2021. In 2022, nearly 11 million persons will require adequate shelters and Non-Food Items including life-saving winter support in the form of heating items, blankets and winter clothing. The overall conditions of refugees in Afghanistan have largely remained identical in comparison to last year with a few deteriorations. Additional REACH studies on shelter have found this sector to be the household's largest expense, which often draws away from other critical needs, compounding vulnerability.³

Furthermore, following the change in government in August 2021, more than four out of five Afghan Households have experienced significant decreases in or elimination of income, making it difficult for households to meet their basic needs, including sufficient housing.⁴ This lack of adequate and affordable housing is likely to push many other Afghans to flee to urban centres, creating pressure to create camps and more formal humanitarian structures to support what is likely to be IDP needs beyond those that host communities will be able to comfortably absorb.

About the assessment

In response to concerns about the possible formation of camps, the Emergency Shelter and Non-Food Items Cluster, in coordination with the Inter-Cluster Coordination Team (ICCT), has engaged in a strategy to provide cash for rent to displaced households without shelter so that they can instead rent already existing houses and apartments. This would thereby avoid the formation of camps in major urban centres, where services are likely to be much poorer, including greater concerns of protection for vulnerable individuals. However, in order to successfully design and implement a rental support programme, a rental assessment needs to be conducted.⁵ Without accurate data, on market prices, neighbourhood services, and housing types and level of rental assistance required will not be able to be identified, and the targeting of the programme will remain ad-hoc and unable to adequately address the needs of the population.⁶

To this end, in coordination with the ES/NFI Cluster, and funded by United Nations High Commissioner for Refugees (UNHCR), REACH conducted a rental assessment of renters (including property agents, landlords, and community leaders involved in housing allocation) and household tenants in each of the largest urban rental markets of Afghanistan's 7 regions: Bamyán (Central Highlands), Jalalabad (East), Khost (South East), Kandahar (South), Herat (West), Mazar (North), and Kunduz (North East). This assessment used a market based, mixed-methods approach, including both Household interviews with renters, and Key Informant interviews with housing providers, including property agents, landlords, community leaders, and Wakil-e Gozars.

REACH developed tools informed by UNHCR's and Norwegian Refugee Council's previous rental assessments⁷ in Afghanistan and identified the key urban areas of each of the 7 cities where neighbourhoods most suitable for rental support were located for the household interviews and identifying the key informants to interview.

REACH then conducted a population-representative household assessment sampling each city population at a 95% confidence level and 5% margin of error, totalling 3,666 interviews. Data was collected from 23 January to 9 February 2022. In addition, purposive interviews with KIIs were conducted in each city to triangulate the results from a landlord/property agent's perspective, totalling 618 interviews, across 7 regional capitals. Then, data cleaning, processing, analysing and validation has been carried out between 25 January to 29 March 2022. The final results report a comprehensive picture of rental conditions in 7 major urban markets of all those 7 regions.

Methodology

The methodology is discussed briefly in the following sections, and further details can be found in the Research [Terms of Reference \(ToR\)](#).

Data collection methods

To conduct the assessment, a mixed-methods approach was adopted to assess rental markets in the 7 major urban centres (Kandahar, Jalalabad, Mazar, Kunduz, Khost, Bamyar, and Herat) across Afghanistan.

Working through its key informant networks, REACH collected the information on the neighbourhoods (Gozars) suitable for renting, being affordable, having adequate living conditions, and having vacant properties for rent. Then, approximate numbers of households renting properties in the Gozar were collected, along with Gozar-level key informant contacts. Wealthy areas, business and industrial areas, slums and informal settlements were excluded from the sampling frame, shown in Table 1.

Table 2: Household interview population type

| No. | HH type | Description |
|-----|---------------------------|---|
| 1 | Refugee returnees | HHs whose living in their area of origin and were forcibly displaced and fled to another country and have since returned home. |
| 2 | Internal displaced people | HHs who had been displaced from their area of origin and who were forcibly displaced from their homes due to conflict or environmental shocks and fled to another location in Afghanistan. |
| 3 | Non-displaced people | HHs who were living in their area of origin and had not been displaced or HHs who were not living in their area of origin but had moved to another part of Afghanistan for work or to be near family. |
| 4 | IDP returnees | HHs who were living in their area of origin and who previously were forcibly displaced and fled to another location in Afghanistan and then returned home. |

Table 1: Sampling frame for HHI and KII Interviews for urban rental assessment, January - February 2022

| No. | Province | Municipality | Estimated HHs In Gozars | Gozars | (Gozars Sampled) | HHIs Planned Sample (+5% Buffer) | KIIs Planned Sample (+5% Buffer) | HHIs Actual Sample | KIIs Actual Sample |
|--------------|-----------|----------------|-------------------------|--------------|------------------|----------------------------------|----------------------------------|--------------------|--------------------|
| 1 | Balkh | Mazar-e Sharif | 119,838 | 403 | 104 | 496 | 113 | 500 | 113 |
| 2 | Bamyan | Bamyan | 22,910 | 16 | 16 | 435 | 32 | 440 | 32 |
| 3 | Herat | Herat | 110,400 | 262 | 95 | 508 | 96 | 508 | 100 |
| 4 | Kandahar | Kandahar | 78,227 | 82 | 68 | 588 | 68 | 609 | 68 |
| 5 | Khost | Matun | 37,040 | 51 | 49 | 439 | 51 | 478 | 67 |
| 6 | Kunduz | Kunduz | 52,340 | 171 | 85 | 528 | 85 | 532 | 86 |
| 7 | Nangarhar | Jalalabad | 48,820 | 95 | 66 | 592 | 73 | 599 | 77 |
| Total | | | 469,575 | 1,080 | 483 | 3,586 | 518 | 3,666 | 543 |

REACH then used a random cluster sampling approach, randomly selecting Gozars and assigning a set number of interviews to be conducted in each Gozar according to the Gozar population. The sample for each urban centre was set at a 95% confidence interval with a 5% margin of error, with a 5% sampling buffer for households' interviews and key informants' interviews and in each Gozar.

Key informants were selected from each Gozar that was randomly selected for the household interviews, to ensure that the same areas in each urban centre were assessed by both tools.

Population of interest

The population of interest for this assessment covers two groups: Households that are renting houses/apartments, explained in detail in Table 2, and key informants, their types detailed in Table 3.

Table 3: Key informant interview population types

| No. | KI type | Description |
|-----|--------------------|---|
| 1 | Community leader | A person who had influence over locals and facilitated real estate and/or house/apartment rental services in a Gozar. |
| 2 | Landlord/landowner | A person who owns real estate and rented house/apartment to other HHs in a Gozar. |
| 3 | Property agent | A person who had official permission from the government to provide real estate and/or rental services in a Gozar. |
| 4 | Wakil-e Gozar | An official local representative who is selected by the people of a Gozar to represent their interests to municipal governance. |

Key informants were typically community leaders, property agents, or landlords of varying size and scope that provide property rental services, including houses or apartments.

Both populations were drawn from the largest urban rental housing markets (the areas of each city with suitable and affordable properties for renting) in each of Afghanistan's seven regions.

Primary data collection

The assessment covered seven urban centres including Kandahar, Jalalabad, Mazar, Kunduz, Matun, Bamyán, and Herat municipalities of Afghanistan. Primary data collection of HHI and KII took place between 23 January 2022 to 9 February 2022.

REACH collected data from the renting population of selected Gozars regardless of their displacement status and interviewed landlords, property agents, and community leaders knowledgeable about property markets within neighbourhoods in each of the assessed municipalities. Quantitative tools were developed and programmed into Kobo Collect. Data was stored on IMPACT Kobo accounts.

The training of 110 enumerators, including 39 female enumerators, lasted three days (17-19 January 2022) and included two days of training and one day of the pilot. Training on the tools and methodologies for each tool were conducted at the same time. Details on the training of the enumerators can be found in Table 4.

95% confidence level and 5% margin of error to understand the main challenges faced by tenants in local level rental markets. Each Gozar was treated as a cluster. The cluster size was determined by the renting HH population in each Gozar.

All household findings are representative at the "urban rental market" level, constituting the neighbourhoods identified by the REACH field teams as suitable for the household assessments. They do not represent the cities themselves. Gozars were included in the data collection which was affordable for household housing of vulnerable categories of population, availability of basic infrastructure and services, and acceptance of IDPs in the area, as the rental assessment guidelines from NRC indicated.⁷ Interviews were distributed among the randomly selected Gozars based on the Gozar population; more populated Gozars were assigned more HHs to be interviewed.

Within each Gozar, enumerators used a systematic random sampling approach. The population of households were divided by the number of interviews that had been assigned to the Gozar by the cluster sampling approach. Starting at one end of the Gozar, the enumerators interviewed each household, skipping a set number of households based on the following formula:

$$\frac{\text{HHs population of the Gozar}}{\text{Sample size set for that Gozar}} = \text{Skipped number of dwellings in the Gozar}$$

If the household was not their shelter or did not consent to be interviewed, the enumerator went to the next household

Table 4: Number of enumerators trained for rental assessment, by gender and location, January 2022

| No. | Province | Municipality | # Of Total Enumerators | # Of Female Enumerators | # Of Male Enumerators | # Of Team Leader | # Of Enumerators For HHI | # Of Enumerators For KI |
|--------------|-----------|----------------|------------------------|-------------------------|-----------------------|------------------|--------------------------|-------------------------|
| 1 | Balkh | Mazar-e-Sharif | 13 | 5 | 8 | 1 | 10 | 2 |
| 2 | Bamyán | Bamyán | 12 | 5 | 7 | 1 | 10 | 1 |
| 3 | Herat | Herat | 14 | 6 | 8 | 2 | 10 | 2 |
| 4 | Kandahar | Kandahar | 14 | 5 | 9 | 2 | 10 | 2 |
| 5 | Khost | Matun | 11 | 4 | 7 | 1 | 8 | 2 |
| 6 | Kunduz | Kunduz | 14 | 5 | 9 | 2 | 10 | 2 |
| 7 | Nangarhar | Jalalabad | 14 | 5 | 9 | 2 | 10 | 2 |
| Total | | | 92 | 35 | 57 | 11 | 68 | 13 |

As a principal, no respondents younger than age 18 were interviewed. Key data tables, values and indicators, can be found in Annex 1. In the data collection, rental assessment tools, including those ES/NFI vulnerability questions, were asked from the selected HHs and KIs. HHI and KII tools, and ES/NFI vulnerability indicators can be found in Annex 2-4.

Household data collection

After identifying the key neighbourhoods that would be appropriate for the rental assessment to cover, REACH implemented a 2-stage cluster sampling approach with a

and interviewed them instead. In the event of multi-storied buildings or buildings with multiple dwellings in them, a randomized method of selection was used, in which each story of the building was treated as a separate HH, counting from bottom to top.

In each regional municipality, a team leader was recruited to lead the enumerators. The team leaders managed the household enumerators and key informants enumerators and acted as the contact point in the field for all the enumerators. Each enumerator was expected to complete 6 interviews a day.

Key informant list

During the secondary data review, contact details of property agents, landlords, and community leaders with information on the rental supply markets were gathered by REACH staff for the creation of a KI list for each city through snowballing sampling of key informants in each Gozar. In some cases, more than one KI was identified for each Gozar.

KIs were purposively sampled. For each Gozar selected for the HHI assessment, REACH also interviewed all of the KIs identified in the same Gozar. REACH interviewed at least one key informant per Gozar that was randomly selected for HH interviews.

REACH doubled the number of interviews in Bamyan due to their only being 16 Gozars. For all other cities, no additional interviews beyond the KIs initial identified in the gozar were interviewed.

KIs were interviewed based on the information that they had for the Gozar they were in. If they had properties in multiple Gozars, they were only interviewed on the properties of the Gozar they were interviewed in.

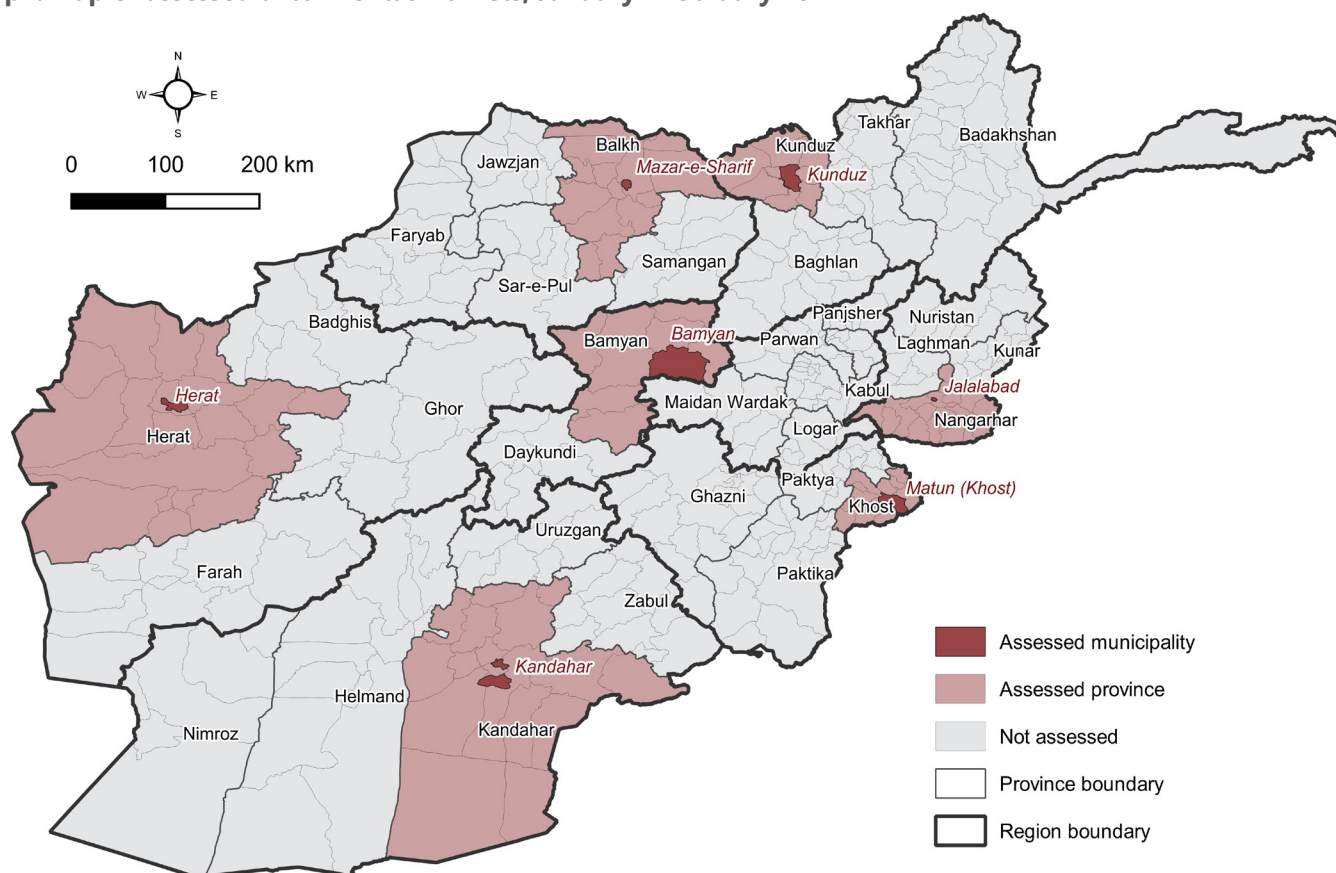

Data processing and analysis

The data collected by enumerators was checked for errors on a daily basis by the REACH assessment teams in accordance with IMPACT Data Cleaning Minimum Standards Checklist⁸; then data was cleaned and analysed by using a customized R script for data checking.

After checking for consistency, outliers, and logic in responses, field teams would follow up with enumerators to clean the data and verify or correct any of the data. This procedure was followed for both HHI and KI.

Following the final cleaning and validation of the data by IMPACT's Headquarters, findings were then analysed according to a data analysis script in R. The findings from HH data collection were generalizable at the urban rental market level with a 95% confidence level and 5% margin of error. Data was aggregated using weights equivalent to the sample size and populations in each urban rental market. Households' findings were disaggregated at the national level, provincial level, household displacement status, head of households gender and household accommodation type to have a clear picture for later analysis. Numeric results were averaged with the mean of those disaggregated levels, and all results were weighted in this way.

Map1: Map of assessed urban rental markets, January - February 2022

8. [IMPACT Data Cleaning Minimum Standards Checklist, January 2020](#)

The KI data were purposively collected through in-person interviews in each municipality, the findings are therefore indicative and were aggregated to urban rental market level. KIs' findings were presented at the municipality and overall levels only.

The KI results were averaged without any weighting. Together, the two data streams constituted a market-based approach for the assessment, where both supply (KII) and demand (HHI) were examined.

Challenges and limitations

- Data was collected from large urban regional centres, and should not be taken as representative of smaller urban centres or rural areas.
- Data collection took place in January and February during the winter, so some expenses, such as heating and electricity, may be different than at other times of the year.
- Due to the small sample size of IDP returnee and refugee returnee households, findings of these groups should be considered as indicative only.
- To ensure that gender was taken into consideration, couples consisting of male and female enumerators were hired to interview household respondents of both genders across 7 cities. As a result, nearly half (49%) of all respondents were female. These distinctions should be clear and taken into account when assessing gender-disaggregated results.
- Results should be considered accurate only for the time period data collected. Given the dynamic nature of the economy, prices may have fluctuated following the data collection period. The exchange rate for the Afghani may have fluctuated since the time of the assessment, leading prices and household spending patterns to change.
- Data collection in Kabul municipality was postponed. It was not included in the time-frame of this assessment cycle.
- Household findings may possibly have been affected due to self-reporting bias, (report their livelihoods more severe than actually might be) as respondents may have felt this would increase their likelihood of receiving assistance. To mitigate this, all household-level interviews were conducted in person and began with a clear explanation that the assessment does not guarantee any form of assistance.
- Key Informants (KIs) consisted more of Wakil-e Gozars, 43%, than other KII types. Despite this, due to their roles in facilitating household rental arrangements, the Wakil-e-Gozars proved sufficiently knowledgeable about rental markets from a supply-side perspective for the assessment.

Key Findings

Displacement and Demographics

- Most assessed HHs were non-displaced (68%), either identifying as host community or HHs that were not originally from the urban centre, but had moved there for work or to be with family. IDP HHs were the second-largest reported proportion of renting HHs (29%). These HHs who had been displaced were likely due to conflict, economic or environmental shocks.¹ Proportions of IDP HHs were more common in Herat (51%) and Jalalabad (83%). Most IDP HHs (92%) were not hosted by other households, except in Herat, where 18% lived with host families.
- Returnee HHs were reported few (2%). The exception to this were HHs in Jalalabad (10%). While the reason for this is unclear, it was likely the result of its close location to the border with Pakistan, from which many Afghan households have returned in recent months due to the declining economic situation there.²
- Most assessed HHs reported having lived in their current locations (89%) between 1 month and 5 years and about half of assessed HHs (56%) intended to stay in those locations for another 6 months to 2 years. This was due to a combination of most non-displaced HHs looking for cheaper rental options, and IDP HHs, who intended to return to their areas of origin.
- At the country level, IDP HHs had lived in their current locations for an average of about 4 years. The average time that HHs reported living in a given accommodation varied: in Jalalabad an average of 6 years was reported, while in Bamyan and Kunduz HHs reported having lived in their properties for only 1 year. Regardless of the length of displacement time, most HHs reported that they had only been displaced once and moved directly to their current location.
- According to ES/NFI Cluster vulnerability criteria, detailed in Annex 4 of this factsheet, 31% of assessed HHs were considered to be vulnerable, suggesting that urban renters were experiencing high needs countrywide. There were no major differences in HH vulnerability between different displacement groups. Vulnerable HHs were more likely to be reported in Matun (44%), Mazar, (42%), and Kunduz (38%), and less likely in Kandahar (14%).

General Housing Information

- A vast majority of assessed HHs reported living in houses (94%), compared to HHs that reported living in apartments (6%). However, in Herat, a higher proportion of HHs were found to be living in apartments (19%). This was likely due mainly to the higher costs of apartments;

houses were reported to cost far less than apartments. In average, monthly rent was reported to be 2,957 AFN³ for houses, while it was reported to be 4,622 AFN³ a month for apartments, service costs were also much cheaper, reportedly being 1,585 AFN³ for houses compared to 2,720 AFN³ for apartments.

- Larger HHs tended to rent larger shelters, and pay more in rent as a result. This was reflected by larger sized rooms in the shelter, rather than more rooms; HHs in all rental markets reported an average of 2-3 rooms, though the average monthly rent varied between 1,604 AFN³ (Bamyan) and 3,646 AFN³ (Kandahar). Household size reflected regional practices; households in the South East (Matun; 9.6 HH members) and East (Jalalabad; 9.2 HH members) and South (Kandahar; 8 HH members) often included extended family members, and were therefore larger, needed more space, and recorded higher rental prices, while HHs in the North (Balkh; 7 HH members), West (Herat; 6.7 HH members) and Central Highlands (Bamyan; 5.9 HH members) tended to only include the immediate family and were therefore smaller. Please refer to Table 7 in Annex 1 for more details.
- Rental costs were usually dependent upon the overall size of the house or apartment overall. The greater the square meters of the shelter, the greater the cost of rent; On average, a shelter cost 13 AFN³ per m². However, in larger cities with more services and less space to expand, like Herat (138m² on average) and Kandahar (195m² on average), the cost of rent was nearly twice as much (23 AFN³ per m² and 19 AFN³ per m², respectively). As a result, in these cities, households tended to rent properties that were 40% (in Herat) and 15% (in Kandahar) smaller than the national average due to their cost. More details are in Table 7 in Annex 1.
- Households' ability to rent more expensive shelters tended to be based on their overall monthly income. The higher the average HH's income, the more expensive the rent that they could afford and were willing to pay for. High income HHs were more likely to rent expensive properties and vice-versa.
- Property rents were lower in the central highlands (Bamyan; 1,604 AFN³) and the north regions (Balkh; 2,701 AFN³), and more expensive in the east (Jalalabad; 3,457 AFN³), south east (Matun; 3,519 AFN³), and south regions (Kandahar; 3,646 AFN³). Assessed KIs noted that anywhere between 10% and 83% of houses/apartments for rent in their Gozar were vacant, with a national average of 39%, signalling a high supply of housing in cities.
- About one-third of the assessed KIs (31%) reported that HHs in their Gozar experienced eviction. Among these 31% KIs, the most commonly reported reasons were

1. REACH, whole of Afghanistan Assessment (WoAA), Key Sectoral Findings, October 2021

2. Rasheed, R., Rizwan, A., Javed, H. et al. Socio-economic and environmental impacts

of COVID-19 pandemic in Pakistan—an integrated analysis, January 2021

3. The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, UN Treasury, UN Operational Rates of Exchange, 01 February 2022.

inability to pay rent (88%) or disputes with the property owner over rental prices (54%). According to KIs, both a countrywide rise in supply and a fall in demand for rental units could have led to an overall fall in the prices of property rents. In general, KIs noted that higher levels of vacancies in Gozars coincided with lower rent prices as well. Further details on the demand and supply of the properties can be found in Table 5 in Annex 1, and the rent cost of houses/apartments reported by KIs in their Gozar can be found in Table 6 in Annex 1.

- All assessed HHs across all rental markets reported using AFN³ to pay the rent for their properties. The majority of assessed HHs (75%) reported that cost of rent had not changed since the previous year, and 21% of HHs reported that it had declined; the rate was reported to have declined by an average of 831 AFN³ nationwide. As rent was reported by its nominal value, due to the rise in inflation in late 2021, the large proportion of HHs reporting no change in rental rates, implied that the real value of rent declined countrywide. This was likely due to the aforementioned rise in supply and fall in demand in rental markets countrywide.
- About half of HHs reported that their house/apartment had separate rooms/spaces for women (53%). This was more common in Matun (80%) and less common in Bamyan (20%) and Mazar (31%), mainly due to cultural practices requiring women to have separate spaces within a shelter.
- Most HHs reported having adequate access to water overall assessed municipalities (87%), although this tended to vary by region. In Mazar (24%) and Jalalabad (23%) HHs reported that they did not have access to enough water. This was likely linked to more problems with service access more generally in each urban rental market. The most common reported water sources were piped schemes (41%), borehole wells (hand pumps) (30%) and dug wells (23%).
- The cost of water bills varied based on the type of water source. HHs reportedly did not have to pay for water services if water sources were either public hand pumps or dug wells; about half (53%) of HHs were using these water sources. HHs that relied on the pipe schemes (41%) typically had to pay for their water; this was most common in Bamyan (75%) and Herat (69%). In Mazar, HHs reported a diverse scheme of water sources, including piped schemes (43%), dug wells (30%) and hand pumps (24%). HHs in Jalalabad reported relying more on hand pumps (61%). KI findings supported the HH data. For a more detailed overview please see Table 8 and Table 9 in Annex 1.
- Nearly all HHs reported having access to electricity (94%), mostly through grid power lines (79%); exceptions were Bamyan (33% access to grid power lines) and Matun (31% access to grid power line) where HHs reported mainly receiving their power through solar panels (56% and 52%, respectively). A large minority of assessed HHs in Matun (38%) and Kandahar (11%) reported not

having access to electricity. All HHs reporting access to public electricity also reported paying for it; while HHs with solar panels did not pay electricity bills. Overall, 63% of HHs reported paying electricity bills. KI findings confirmed the HH findings.

- HHs reported that fuel and heating during the winter was their largest service expense (a national average of 1,439 AFN³ – 87% of the overall total reported cost of services, 1,653 AFN³). Overall, 55% of HHs reported paying for heating fuel. Fuel expenses were higher in colder areas, both due to the environment and more expensive fuel; HHs in Bamyan reported the highest expenses, 3,281 AFN³, due to the use of coal as their main source of fuel. HHs in Herat reported low fuel costs, but much higher electricity costs than renters in other cities (1,359 AFN³, over the countrywide average of 990 AFN³). This is because electricity was the most commonly reported heating fuel by HHs in Herat.
- Most HHs viewed rental disputes as an individual, household matter; 67% of HHs reported that in the event of a dispute, they would solve the dispute with the landlord themselves. Exceptions were HHs in Jalalabad, where 42% reported that they would involve community leadership, and HHs in Kandahar, where 38% would involve religious leaders.
- Very few HHs reported having to pay an advance when they began a rental contract; only 14% of HHs reported having to pay any months of rent in advance. Those that did typically needed to pay at least 3 months of their typical monthly rental cost.

Accommodation Arrangement

- Most of HHs reported that they had chosen to rent their houses/apartments because the rental property was affordable (63%). This was most commonly reported in Kandahar (85%). Housing selection was reported by HHs to be driven mainly by the cost of rent and the availability of housing.
- Written rental agreements were reported to be the most common rental agreements used by HHs (43%), but verbal rental agreements were also common (34%). In small, less developed cities, like Bamyan (69%) and Matun (75%), a more supportive local community likely compensated for the lack of secure legal housing arrangements. However, in larger, more developed cities where verbal agreements were also commonly reported, such as Jalalabad (51%), and Mazar (46%), this likely lead to increased vulnerability concerns, particularly, around evictions. In most locations, rental agreements were brokered directly with the property owner, except in Herat (51%), where having a deal with a property dealer/middle man was more common.
- Most HHs reported that they found their locations for rent through family or friends (70%), rather than formal rental services (23%). The exception to this was HHs in Herat, where 51% of HHs relied on property services

to find their shelter for rent. KIs, many of whom were property agents, supported this, with a majority of them (68%) reporting that their tenants found them through family or relatives.

- Nearly half of HHs reported that they were renting moderately damaged, severely damaged or destroyed structures (45%), and 14% of HHs were living in shelters classified by the ES/NFI Cluster as emergency shelters presenting risks for their inhabitants. This may be connected to the reported high usage of wooden poles for roofing and packed mud (Pakhsa) for walls, cheaper but less resilient materials which require regular maintenance to avoid degrading over time.

Service Access

- Access to sanitation varied by type of service and the rental market. Pit latrines with slabs were the most common sanitation receptacle reported (47%), particularly in large urban rental markets, like Herat (88%) and Kandahar (57%). Flush latrines were the next most common (21%), and the most common toilet in Jalalabad (47%). Latrines were typically connected to the septic tanks and needed to be occasionally de-sludged, rather than connected to municipal systems. In Bamyān (28%) and Mazar (26%), open-hole latrines were also reported. A high proportion of HHs, 72%, had hand-washing facilities inside their homes, but 28% of HHs reported not having access to soap.
- Sources for cooking fuel varied by rental markets as well. In large urban rental markets, such as Herat and Kandahar, the use of liquid gas was commonly reported (68% and 55%, respectively) while wood was more commonly reported in Kunduz (66%) and Khost (63%). More concerning was Jalalabad, where almost half of HHs (48%) reported that waste was the most common cooking fuel.
- Waste disposal methods varied across rental markets, with no nationally predominating method. Throwing garbage in open fields was most commonly reported (37%), followed by garbage collection (29%). In Herat and Bamyān, however, garbage collection was very common, reported by 69% and 62% of HHs, respectively. KIs reported similar findings.
- Most HHs across all of the assessed urban rental markets reported that they had access to active health centres (87%), education services (97%) and markets (91%). Mazar was an exception to this, with 31% of HHs reported not having access to an active health centre and 1-5th of HHs reported not having access to functioning markets (23%). KIs findings supported the HHs findings.

Livelihoods and Income

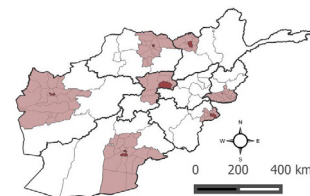

- A majority of assessed HHs reported that labour was a source of income (85%) for them in the previous month. Borrowing was the second most reported HH income source (37%), particularly in Bamyān (65%), and Kunduz (46%). Unskilled daily labour (65%) and skilled daily labour (16%), both generally unstable and low paying employment sources, were the main reported income sources for renting HHs. KI supported the HHI findings.
- The vast majority of HHs reported holding debt (85%). The average level of HH debt was also very high; debt burdens ranged from about 4 to 14 times a HH's average monthly income, depending on the urban rental market. While the level of HH debt varied across rental markets, in general, HHs with higher incomes tended to take on more debt, reflecting higher overall livelihood expenses. In addition, HHs in urban rental markets with lower monthly HH income tended to report higher ratios of debt to monthly income. Bamyān, which reported the lowest average HH income, reported the highest ratio of debt to income (14), while Khost (10) and Kandahar (4), had higher wages and much lower debt ratios. For a more detailed overview please see Table 10 in Annex 1.
- Not paying rent on time was commonly reported by HHs (43%). The main reason for delays in rental payments was because breadwinners were not paid on time (77%). This was directly linked to increased vulnerability, as 1/3 of KIs noted that at least one HH had been evicted in the last 3 months; KIs further reported that the main reason for eviction was that reported households had not paid their rent on time (60%). The poor economy and lack of access to cash had a direct impact on shelter and protection concerns due to the rising economic pressure towards evictions.

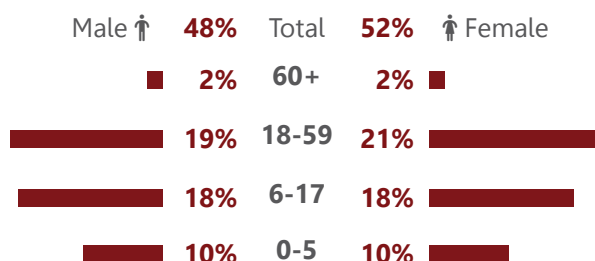

Households Rental Assessment Household Country Wide Findings

February 2022

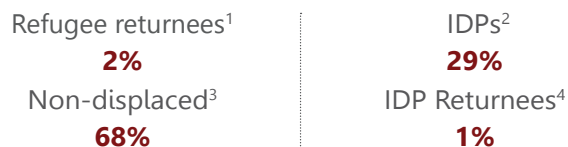

Demographics

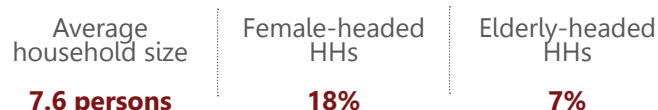

Reported HHs composition, disaggregated by age and gender:

HHs surveyed reported the following displacement statuses:

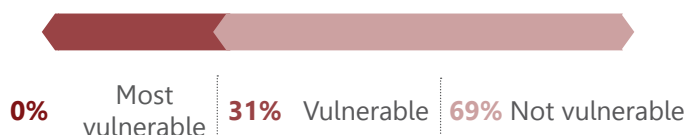

Key demographics of the interviewed HHs:

Household Vulnerability Factors

Reported household vulnerability category, based on key indicators determined by the ES/NFI Cluster criteria.⁵

0% of assessed HHs reported that their head of household (hohh) is either women or child without other adult males in the HH.

30% of assessed HHs reported a dependency ratio⁶ of 8 or more.

4% of assessed HHs that reported no adult male of working age or adult working female in the HH.

36% of assessed HHs reported that their hohh had a disability, was suffering from a chronic illness, or was an older person.

52%

of assessed HHs reported that, including hohh, one or more members had a disability or chronic illness.

Displacement

The top 3 most common provinces assessed IDP HHs reportedly lived before their first displacement were:

Average duration of displacement reported by assessed IDP HHs since their HH had first displaced: **6.8 year(s)**

Assessed IDP HHs by reported length of time, on average, they had been living in their current location: **3.6 year(s)**

19.6 year(s) Average reported length of time since assessed returnee HHs fled Afghanistan for the first time.

8.2 year(s) Assessed returnee HHs by reported length of time, on average, since they last returned to Afghanistan

Assessed IDP returnee HHs by reported length of time since they last fled this location: **5.5 year(s)**

Assessed IDP returnee HHs by reported length of time since they returned to this location: **3.3 year(s)**

1. Refugee returnees: HHs whose living in their area of origin and were forcibly displaced and fled to another country and have since returned home.

2. IDPs: HHs who had been displaced from their area of origin and who were forcibly displaced from their homes due to conflict or environmental shocks and fled to another location in Afghanistan.

3. Non-displaced: HHs who were living in their area of origin and had not been displaced or HHs who were not living in their area of origin but had moved to another part of Afghanistan for work or to be near family.

4. IDP Returnees: HHs who were living in their area of origin and who previously were forcibly displaced and fled to another location in Afghanistan and then returned home.

5. The ES/NFI cluster maintains a set of vulnerability criteria based on 11 indicators which have the following categories: a scoring system of 0-24: Not Sufficiently Vulnerable (0-8); Vulnerable (9-16); and the Most Vulnerable (17-24).

6. Dependency ratio equated to total number of household members / (sum of adult males (age 18 to 59) and female breadwinners - sum of disabled adult males and disabled female breadwinners).

House/Apartment General Information

Assessed HHs by reported accommodation type:

94% House⁷ **6%** Apartment⁸

Top 5 reported types of construction materials used for construction of the house/apartment, by % of HHs:

| | |
|----------------------------|------------|
| Permanent mud | 38% |
| Permanent firebricks | 23% |
| Permanent sun-dried bricks | 20% |
| Permanent concrete | 15% |
| Permanent concrete blocks | 3% |

Average duration of stay in current house/apartment reported by assessed HHs:

| | |
|---------------------------------|-------------------------------|
| 1% Less than 1 month | 20% 2 years to 5 years |
| 24% 1 month to 6 months | 7% 5 years to 10 years |
| 22% 6 months to 1 year | 2% 10 years or more |
| 23% 1 year up to 2 years | 3% Always lived here |

Average reported number of individuals living in house/apartment: **7.6**

Average reported number of rooms available in house/apartment: **2.6**

73% of assessed HHs reported there was a separate room for kitchen in their shelter.

47% of assessed HHs reported that they had separate rooms available in their shelter for male and female household members.

6% of assessed HHs reported that they owned livestock.

Assessed HHs living in houses on average paid the following monthly rent:⁹ **2,957** AFN

Assessed HHs living in apartments on average paid the following monthly rent:⁹ **4,622** AFN

100% of assessed HHs reported paying for their rent in Afghani currency.

House/apartment Service Costs

Of those HHs who reported that they were paying for the services, their average reported expenditure⁹ for each utility is:¹⁰

| | | | |
|----------------|------------------|---------------------|----------------|
| Water supply | 429 AFN | Internet/television | 592 AFN |
| Electricity | 990 AFN | Parking | 200 AFN |
| Fuel/heating | 1,439 AFN | Communal services | 132 AFN |
| Waste disposal | 489 AFN | Other bills | 375 AFN |

Insurance/Deposit

100% of assessed HHs reported not having insurance for their house/apartment.

4% of assessed HHs having to pay a deposit to rent their house/apartment.

Average amount of money households reported having to spent on a deposit for their house/apartment:⁹ **8,591** AFN

14% of assessed HHs reported that they were living in an open, emergency, or makeshift shelter.¹¹

Accommodation Arrangements

Assessed HHs by reported type of rental agreement they had for their house/apartment:

| | |
|------------|--|
| 43% | Written agreement with the house/apartment owner |
| 17% | A written agreement with the property dealer |
| 4% | Letter with stamp from Community Leader |
| 34% | Verbal agreement |

HHs by average reported length of time that the rental agreement is valid:

| | | | |
|------------|---------------|------------|--------------------|
| 1% | 1 month | 38% | 6 months to 1 year |
| 9% | 1 to 3 months | 38% | More than 1 year |
| 14% | 3 to 6 months | 1% | Not to answer |

7. House: a structure for living with 1-2 floors and a yard.

8. Apartment: a structure with many different living units inside of the structure, with more than 2 floors and no yard.

9. All costs, income and debt were reported in Afghani (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury](#), UN

[Operational Rates of Exchange](#), 01 February 2022.

10. Respondent could select more than one response.

11. Shelter type was unfinished or shelter damage level was either fully destroyed, makeshift, with no solid or permanent materials, or bad (significant structural damage, including collapsed walls or partly collapsed floors or roof).

8% of assessed HHs reported residing with or hosting other HHs:

8% of assessed HHs reported being hosted by another HH.

Average number of rooms assessed HHs reported that they were residing: **2.4**

93% of assessed HHs reported that all of the rooms in the house/apartment were covered by their rent:

Average size of the house/apartment in square meters, as reported by households: **231**

14% of assessed household reported that they had to pay at least 1 month of rent in advance.
On average, **3** months of rent were reported to need to be paid in advance.

Assessed households reported that rent was paid to:

| | |
|-------------------------------|---------------------------------------|
| 81% The owner | 7% Representative of the owner |
| 6% The property dealer | 7% Relative of the owner |

% of assessed HHs by who they would go to in the event of a dispute with the landlord or property agent:

| | |
|------------------------------------|------------------------------------|
| 67% Deal with it themselves | 0% Religious courts |
| 1% Police | 21% Community leadership |
| 0% Civil courts | 11% Religious leader/mullah |

Shelter Selection

% of assessed HHs by reported main reasons that they chose this house/apartment:

| | |
|---|--|
| 7% Only available house/apartment | 5% People I know live here |
| 63% Most affordable | 8% Family/relatives lives here |
| 8% Wanted to live here | 0% House/apartment rent was paid by someone |
| 8% Facilities (services) are near here | |

Top 4 most reported answers from assessed HHs of how they found their house/apartment:

| | |
|---------------------------------|------------|
| Family or relative | 45% |
| Friend or colleague | 25% |
| Through a property dealer/agent | 23% |
| Community leader/elder | 6% |

40% of assessed HHs reportedly faced challenges finding a house/apartment.

Assessed HHs faced the following challenges when finding a house/apartment:¹⁰

| | |
|---|------------|
| All available houses/apartments were too expensive | 82% |
| No houses/apartments were available to rent | 29% |
| Property agents did not want to rent to me or my family | 1% |
| Host community did not want us here | 1% |
| Did not know how to find a place to rent | 7% |
| Had never rented before | 5% |

Building/Rental Area Conditions

% of HHs reported condition of the house overall:

| | |
|--------------------------------|-------------------------------------|
| 25% Good (no damage) | 12% Bad (significant damage) |
| 30% Minor (some damage) | 1% Fully destroyed |
| 32% Moderate (damage) | |

Building/Rental Area Materials

Most commonly reported building materials used in house/apartment roof construction by HHs:¹⁰

| | |
|-----------------------|----------------------------|
| 44% Wood/poles | 33% Steel I-beam |
| 38% Bricks | 1% CGI Iron sheet |
| 24% Concrete | 3% Asphalt (Isogam) |
| 14% Reeds | |

Top 4 most commonly reported building materials used in house/apartment wall construction:¹⁰

| | |
|---------------------------------|--------------------------------|
| 70% Bricks | 29% Packed Mud (Pakhsa) |
| 37% Mud Plaster (Kaghil) | 27% Gypsum/Plaster |

Top 4 most commonly reported building materials used in house/apartment floor construction:¹⁰

| | |
|---------------------------------|--------------------------------|
| 42% Mud Plaster (Kaghil) | 24% Packed Mud (Pakhsa) |
| 37% Concrete | 7% Bricks |

Service Access

87% of assessed HHs reported that they had access to water for drinking, cooking, and bathing.

Top 5 most reported answers from assessed HHs with enough water by main source of water for domestic use:

| | |
|--------------------------------|--|
| 41% Pipe Scheme | 6% Purchasing water/ water tanker |
| 30% Hand pump/bore well | 0% Stream/River |
| 23% Dug well | |

71% of the assessed households reported that their primary water source was located inside the building they lived in.

% of assessed HHs that reporting access to hand-washing facilities:¹⁰

| | |
|--|---|
| 72% Yes, inside the house/ apartment | 3% Yes, but only outside of rental area/building |
| 17% Yes, in rental area/ building, but not inside house/apartment | 9% No, none available |

Assessed households by reported kind of sanitation facility (latrine/toilet) that they used:

| | |
|---------------------------------------|-----------------------------|
| 21% Flush or pour/flush toilet | 14% Open hole |
| 47% Pit latrine with a slab | 0% No latrine/toilet |
| 18% Pit latrine without a slab | |

17%

of the assessed HHs reported with sharing latrine/toilet.

87% of assessed HHs reported with poor asset holdings.

% of assessed HHs reported currently have the following non-food items in their HHs.

| | |
|--|------------|
| Sleeping mats or mattress | 91% |
| Kitchen sets (cooking pots and stainless steel cups) | 89% |
| Water storage containers (cans, buckets with lid, etc.) | 69% |
| Heating devices (gas cylinder / traditional bukhari stove) | 65% |
| Plastic tarpaulin | 26% |
| Winter clothing, including for all children | 46% |

Energy and Heating

% of assessed HHs by reported main fuel source for heating:

| | |
|----------------------|------------|
| Wood, bushes | 32% |
| Coal | 13% |
| Liquid petroleum gas | 10% |
| Charcoal | 17% |
| Electricity | 11% |
| Dung | 6% |
| Waste | 11% |

% of assessed HHs by reported main fuel sources for cooking:

| | |
|----------------------|------------|
| Wood, bushes | 31% |
| Coal | 4% |
| Liquid petroleum gas | 45% |
| Charcoal | 3% |
| Electricity | 0% |
| Dung | 7% |
| Waste | 11% |

94% of assessed HHs reported that they had access to electricity.

Of HHs reporting access to electricity, the main reported sources were:

| | |
|------------------------------|---------------------|
| 79% Power lines/ grid | 1% Generator |
| 6% Hydroelectric dam | 3% Battery |
| 11% Solar power | 0% None |

Waste Disposal

% of assessed HHs by reported main solid waste disposal methods:

| | |
|----------------------------|------------|
| Garbage collection service | 29% |
| Burned | 6% |
| Buried | 6% |
| Community containers | 22% |
| Throw in open field | 37% |

% of assessed HHs by reported main liquid waste disposal methods:

| | |
|-------------------------------|------------|
| Septic tank | 3% |
| Open drainage/street channels | 46% |
| Municipal sewage network | 10% |
| Simple cesspit/hole in ground | 25% |
| Dump on ground | 17% |

Other Service Access

87% assessed HHs reported that a health centre was accessible from their house/apartment:

Of those HHs who reported having access to a health center, the average time to the facility from their homes was:

| | |
|---------------------------------|-----------------------------|
| 25% Less than 15 minutes | 5% 1-2 hours |
| 45% 15-29 minutes | 1% More than 2 hours |
| 24% 30-59 minutes | |

97%

of assessed HHs reported having access to school. The following schools types were accessible:¹⁰

| | |
|---------------------------------|------------|
| Primary school | 35% |
| High school | 84% |
| Secondary school | 41% |
| Religious madrasa ¹² | 45% |
| Community based education | 5% |
| Technical training centre | 7% |

% of assessed HHs reported HHs access to school, by school distance:

| | |
|---------------------------------|-----------------------------|
| 36% Less than 15 minutes | 2% 1-2 hours |
| 47% 15-29 minutes | 0% More than 2 hours |
| 16% 30-59 minutes | |

91% of assessed HHs reported having access to a market.

Assessed HHs with access to a market, by reported distance:

| | |
|---------------------------------|-----------------------------|
| 55% Less than 15 minutes | 3% 1-2 hours |
| 29% 15-29 minutes | 0% More than 2 hours |
| 13% 30-59 minutes | |

Livelihoods and Income

Average number of breadwinners reported per assessed households: **1.2**

Average number of female breadwinners reported per assessed households: **0.1**

10% Average of assessed households reported having at least one female breadwinner:

Top 5 sources of income, in last 30 days, reported by assessed households:¹⁰

| | |
|--------------------------------------|------------|
| Unskilled daily labour / no contract | 65% |
| Skilled daily labour / no contract | 16% |
| None | 7% |
| Business / sale of goods / services | 6% |
| Formal employment / with contract | 5% |

12. A separate religious school that is separate from a mosque.

Average amount of total monthly cash income reported by assessed households:⁹

6,505
AFN

Of households reporting that they received income, the top 5 main sources of cash were:¹⁰

| | |
|-----------------------------|------------|
| Income through work/labour | 85% |
| Borrow money / take on debt | 37% |
| Selling personal belongings | 10% |
| Humanitarian Aid | 7% |
| None | 4% |

85% of assessed HHs reported that they had debt.

For the HHs in debt, the average household debt amounted to:⁹

44,562
AFN

43% of assessed HHs reported that they were relying only on borrowing, begging, or Zakat:¹³

75% of assessed HHs reported relying on casual labour by one member of the household.

4% of assessed HHs reported that they were living without any source of livelihoods or income-generating activities.

Cash Access and Rental Methods

43% of assessed HHs reported not paying rent on time each month.

Top 5 reasons assessed HHs were unable to pay their rent on time:¹⁰

| | |
|---|------------|
| Breadwinners have not been paid on time | 77% |
| I had no money/I was unemployed | 14% |
| I had the money but could not withdraw it from the bank | 8% |
| I was not physically present to pay for it | 7% |
| Rent increased in price | 2% |

% of assessed HHs reported that their rent had changed in the following ways in the previous year:

Assessed HHs reported changes in rent amount since the previous year.

791 AFN

Methods of rental payment reported by assessed HHs:¹⁰

| | |
|---------------------------|--------------------------------------|
| 98% Cash (direct) | 0% Credit/loan |
| 1% Bank account | 2% Hawala ¹⁶ |
| 1% Mobile transfer | 1% In-kind (crops, materials) |

55% of assessed HHs reported that they needed documents to rent house/apartment.

% of assessed HHs by the type of documents needed to sign a rental agreement:¹⁰

| | |
|------------------------------------|-------------------------------|
| 94% Tazkera ¹⁴ | 3% Employment contract |
| 48% Letter of guarantee | 0% Bank statement |
| 56% Witness / sign document | 0% Nothing |

50% of assessed HHs reported that they received a receipt/proof of payment for rent payment.

Assessed HHs by most reported preferred method to receive cash assistance (for any purpose):

| | |
|---------------------------|--------------------------------------|
| 97% Cash (direct) | 0% Credit/loan |
| 1% Bank account | 0% Hawala ¹⁵ |
| 0% Mobile transfer | 1% In-kind (crops, materials) |

13. Payment made annually under Islamic law on certain kinds of property and used for charitable and religious purposes.

14. Tazkera: Afghanistan national identification card.

15. A Hawala system refers to an informal channel for transferring funds from one location to another through service providers.

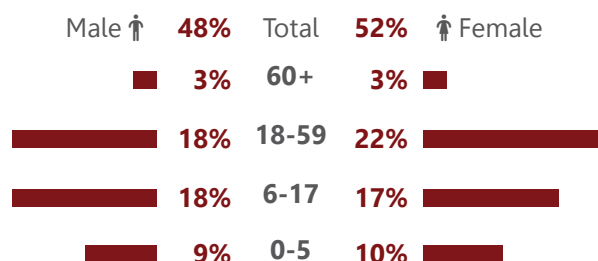

Households Rental Assessment Mazar-e-Sharif Municipality Balkh Province, Afghanistan

February 2022

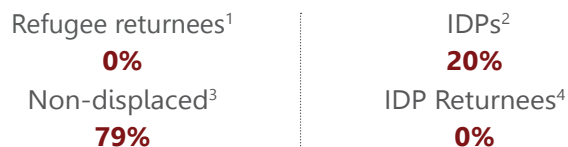

Demographics

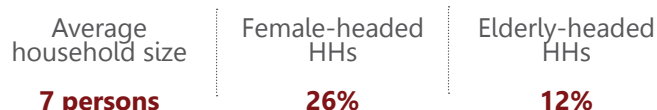

Reported HHs composition, disaggregated by age and gender:

HHs surveyed reported the following displacement statuses:

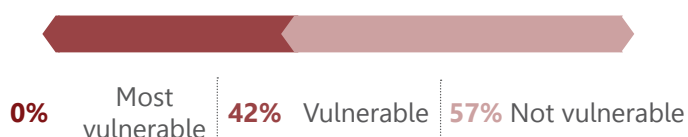

Key demographics of the interviewed HHs:

Household Vulnerability Factors

Reported household vulnerability category, based on key indicators determined by the ES/NFI Cluster criteria.⁵

0% of assessed HHs reported that their head of household (hohh) is either women or child without other adult males in the HH.

30% of assessed HHs reported a dependency ratio⁶ of 8 or more.

7% of assessed HHs that reported no adult male of working age or adult working female in the HH.

45% of assessed HHs reported that their hohh had a disability, was suffering from a chronic illness, or was an older person.

60%

of assessed HHs reported that, including hohh, one or more members had a disability or chronic illness.

Displacement

The top 3 most common provinces assessed IDP HHs reportedly lived before their first displacement were:

Average duration of displacement reported by assessed IDP HHs since their HH had first displaced: **8.5 year(s)**

Assessed IDP HHs by reported length of time, on average, they had been living in their current location: **3 year(s)**

3.9 year(s) Average reported length of time since assessed returnee HHs fled Afghanistan for the first time.

1.8 year(s) Assessed returnee HHs by reported length of time, on average, since they last returned to Afghanistan

Assessed IDP returnee HHs by reported length of time since they last fled this location: **0 year(s)**

Assessed IDP returnee HHs by reported length of time since they returned to this location: **0 year(s)**

1. Refugee returnees: HHs whose living in their area of origin and were forcibly displaced and fled to another country and have since returned home.
2. IDPs: HHs who had been displaced from their area of origin and who were forcibly displaced from their homes due to conflict or environmental shocks and fled to another location in Afghanistan.
3. Non-displaced: HHs who were living in their area of origin and had not been displaced or HHs who were not living in their area of origin but had moved to another part of Afghanistan for work or to be near family.

4. IDP Returnees: HHs who were living in their area of origin and who previously were forcibly displaced and fled to another location in Afghanistan and then returned home.
5. The ES/NFI cluster maintains a set of vulnerability criteria based on 11 indicators which have the following categories: a scoring system of 0-24: Not Sufficiently Vulnerable (0-8); Vulnerable (9-16); and the Most Vulnerable (17-24).
6. Dependency ratio equated to total number of household members / (sum of adult males (age 18 to 59) and female breadwinners - sum of disabled adult males and disabled female breadwinners).

7. House: a structure for living with 1-2 floors and a yard.

8. Apartment: a structure with many different living units inside of the structure, with more than 2 floors and no yard.

9. All costs, income and debt were reported in Afghani (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury](#), UN

[Operational Rates of Exchange](#), 01 February 2022.

10. Respondent could select more than one response.

11. Shelter type was unfinished or shelter damage level was either fully destroyed, makeshift, with no solid or permanent materials, or bad (significant structural damage, including collapsed walls or partly collapsed floors or roof).

6% of assessed HHs reported residing with or hosting other HHs:

7% of assessed HHs reported being hosted by another HH.

Average number of rooms assessed HHs reported that they were residing: **2**

80% of assessed HHs reported that all of the rooms in the house/apartment were covered by their rent:

Average size of the house/apartment in square meters, as reported by households: **288**

17% of assessed household reported that they had to pay at least 1 month of rent in advance.
On average, **3** months of rent were reported to need to be paid in advance.

Assessed households reported that rent was paid to:

| | |
|-------------------------------|---------------------------------------|
| 81% The owner | 7% Representative of the owner |
| 2% The property dealer | 10% Relative of the owner |

% of assessed HHs by who they would go to in the event of a dispute with the landlord or property agent:

| | |
|------------------------------------|-----------------------------------|
| 77% Deal with it themselves | 0% Religious courts |
| 0% Police | 20% Community leadership |
| 0% Civil courts | 2% Religious leader/mullah |

Shelter Selection

% of assessed HHs by reported main reasons that they chose this house/apartment:

| | |
|---|--|
| 10% Only available house/apartment | 6% People I know live here |
| 61% Most affordable | 11% Family/relatives lives here |
| 4% Wanted to live here | 0% House/apartment rent was paid by someone |
| 8% Facilities (services) are near here | |

Top 4 most reported answers from assessed HHs of how they found their house/apartment:

| | |
|---------------------------------|------------|
| Family or relative | 50% |
| Friend or colleague | 26% |
| Through a property dealer/agent | 13% |
| Community leader/elder | 10% |

36% of assessed HHs reportedly faced challenges finding a house/apartment.

Assessed HHs faced the following challenges when finding a house/apartment:¹⁰

| | |
|---|------------|
| All available houses/apartments were too expensive | 93% |
| No houses/apartments were available to rent | 22% |
| Property agents did not want to rent to me or my family | 1% |
| Host community did not want us here | 0% |
| Did not know how to find a place to rent | 8% |
| Had never rented before | 8% |

Building/Rental Area Conditions

% of HHs reported condition of the house overall:

| | |
|--------------------------------|-------------------------------------|
| 16% Good (no damage) | 17% Bad (significant damage) |
| 23% Minor (some damage) | 3% Fully destroyed |
| 41% Moderate (damage) | |

Building/Rental Area Materials

Most commonly reported building materials used in house/apartment roof construction by HHs:¹⁰

| | |
|-----------------------|----------------------------|
| 45% Wood/poles | 37% Steel I-beam |
| 40% Bricks | 1% CGI Iron sheet |
| 25% Concrete | 4% Asphalt (Isogam) |
| 6% Reeds | |

Top 4 most commonly reported building materials used in house/apartment wall construction:¹⁰

| | |
|---------------------------|---------------------------------|
| 73% Bricks | 25% Packed Mud (Pakhsa) |
| 30% Gypsum/Plaster | 24% Mud Plaster (Kaghil) |

Top 4 most commonly reported building materials used in house/apartment floor construction:¹⁰

| | |
|---------------------------------|---------------------------|
| 50% Packed Mud (Pakhsa) | 22% Concrete |
| 27% Mud Plaster (Kaghil) | 10% Gypsum/Plaster |

Service Access

76% of assessed HHs reported that they had access to water for drinking, cooking, and bathing.

Top 5 most reported answers from assessed HHs with enough water by main source of water for domestic use:

| | |
|--------------------------------|--|
| 43% Pipe Scheme | 4% Purchasing water/ water tanker |
| 30% Dug well | 0% Stream/River |
| 23% Hand pump/bore well | |

61% of the assessed households reported that their primary water source was located inside the building they lived in.

% of assessed HHs that reporting access to hand-washing facilities:¹⁰

| | |
|--|---|
| 48% Yes, inside the house/ apartment | 4% Yes, but only outside of rental area/building |
| 32% Yes, in rental area/ building, but not inside house/apartment | 17% No, none available |

Assessed households by reported kind of sanitation facility (latrine/toilet) that they used:

| | |
|---------------------------------------|-----------------------------|
| 28% Flush or pour/flush toilet | 26% Open hole |
| 21% Pit latrine with a slab | 0% No latrine/toilet |
| 25% Pit latrine without a slab | |

11%

of the assessed HHs reported with sharing latrine/toilet.

86% of assessed HHs reported with poor asset holdings.

% of assessed HHs reported currently have the following non-food items in their HHs.

| | |
|--|------------|
| Sleeping mats or mattress | 88% |
| Kitchen sets (cooking pots and stainless steel cups) | 85% |
| Water storage containers (cans, buckets with lid, etc.) | 56% |
| Heating devices (gas cylinder / traditional bukhari stove) | 56% |
| Plastic tarpaulin | 24% |
| Winter clothing, including for all children | 37% |

Energy and Heating

% of assessed HHs by reported main fuel source for heating:

| | |
|----------------------|------------|
| Wood, bushes | 22% |
| Coal | 29% |
| Liquid petroleum gas | 1% |
| Charcoal | 21% |
| Electricity | 6% |
| Dung | 12% |
| Waste | 8% |

% of assessed HHs by reported main fuel sources for cooking:

| | |
|----------------------|------------|
| Wood, bushes | 16% |
| Coal | 9% |
| Liquid petroleum gas | 51% |
| Charcoal | 5% |
| Electricity | 0% |
| Dung | 11% |
| Waste | 8% |

96% of assessed HHs reported that they had access to electricity.

Of HHs reporting access to electricity, the main reported sources were:

| | |
|------------------------------|---------------------|
| 95% Power lines/ grid | 0% Generator |
| 0% Hydroelectric dam | 1% Battery |
| 4% Solar power | 0% None |

Waste Disposal

% of assessed HHs by reported main solid waste disposal methods:

| | |
|----------------------------|------------|
| Garbage collection service | 26% |
| Burned | 6% |
| Buried | 8% |
| Community containers | 18% |
| Throw in open field | 41% |

% of assessed HHs by reported main liquid waste disposal methods:

| | |
|-------------------------------|------------|
| Septic tank | 3% |
| Open drainage/street channels | 41% |
| Municipal sewage network | 1% |
| Simple cesspit/hole in ground | 27% |
| Dump on ground | 27% |

Other Service Access

69% assessed HHs reported that a health centre was accessible from their house/apartment:

Of those HHs who reported having access to a health center, the average time to the facility from their homes was:

| | |
|---------------------------------|-----------------------------|
| 38% Less than 15 minutes | 7% 1-2 hours |
| 32% 15-29 minutes | 0% More than 2 hours |
| 23% 30-59 minutes | |

97%

of assessed HHs reported having access to school. The following schools types were accessible:¹⁰

| | |
|----------------------------------|------------|
| Primary school | 21% |
| High school | 84% |
| Secondary school | 33% |
| Religious madrassa ¹² | 54% |
| Community based education | 10% |
| Technical training centre | 20% |

% of assessed HHs reported HHs access to school, by school distance:

| | |
|---------------------------------|-----------------------------|
| 56% Less than 15 minutes | 2% 1-2 hours |
| 32% 15-29 minutes | 0% More than 2 hours |
| 11% 30-59 minutes | |

77% of assessed HHs reported having access to a market.

Assessed HHs with access to a market, by reported distance:

| | |
|---------------------------------|-----------------------------|
| 75% Less than 15 minutes | 0% 1-2 hours |
| 19% 15-29 minutes | 0% More than 2 hours |
| 6% 30-59 minutes | |

Livelihoods and Income

Average number of breadwinners reported per assessed households: **1.1**

Average number of female breadwinners reported per assessed households: **0.1**

10% Average of assessed households reported having at least one female breadwinner:

Top 5 sources of income, in last 30 days, reported by assessed households:¹⁰

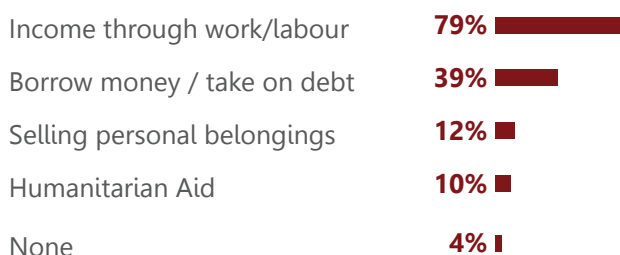

| | |
|--------------------------------------|------------|
| Unskilled daily labour / no contract | 62% |
| None | 18% |
| Skilled daily labour / no contract | 12% |
| Formal employment / with contract | 4% |
| Business / sale of goods / services | 3% |

12. A separate religious school that is separate from a mosque.

Average amount of total monthly cash income reported by assessed households:⁹

4,723
AFN

Of households reporting that they received income, the top 5 main sources of cash were:¹⁰

86% of assessed HHs reported that they had debt.

For the HHs in debt, the average household debt amounted to:⁹

46,958
AFN

48% of assessed HHs reported that they were relying only on borrowing, begging, or Zakat:¹³

75% of assessed HHs reported relying on casual labour by one member of the household.

4% of assessed HHs reported that they were living without any source of livelihoods or income-generating activities.

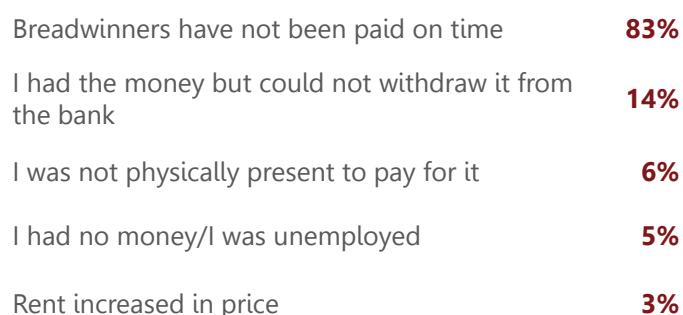

Cash Access and Rental Methods

60% of assessed HHs reported not paying rent on time each month.

Top 5 reasons assessed HHs were unable to pay their rent on time:¹⁰

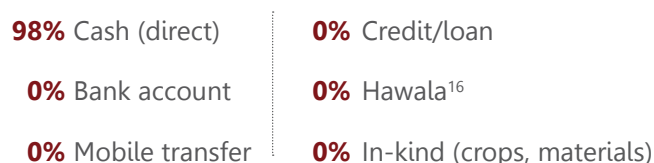

% of assessed HHs reported that their rent had changed in the following ways in the previous year:

Assessed HHs reported changes in rent amount since the previous year.

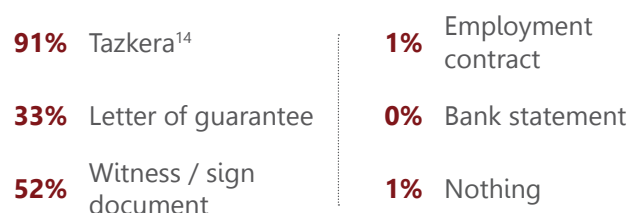

847 AFN

Methods of rental payment reported by assessed HHs:¹⁰

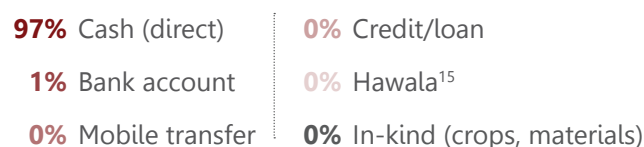

40% of assessed HHs reported that they needed documents to rent house/apartment.

% of assessed HHs by the type of documents needed to sign a rental agreement:¹⁰

32% of assessed HHs reported that they received a receipt/proof of payment for rent payment.

Assessed HHs by most reported preferred method to receive cash assistance (for any purpose):

13. Payment made annually under Islamic law on certain kinds of property and used for charitable and religious purposes.

14. Tazkera: Afghanistan national identification card.

15. A Hawala system refers to an informal channel for transferring funds from one location to another through service providers.

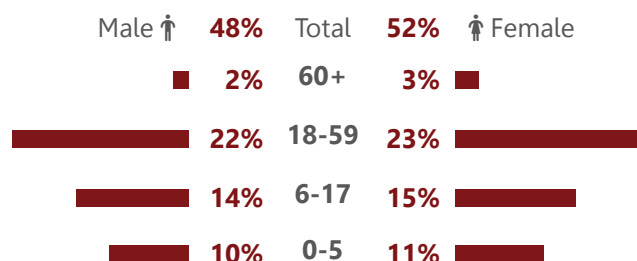

Households Rental Assessment Bamyan Municipality Bamyan Province, Afghanistan

February 2022

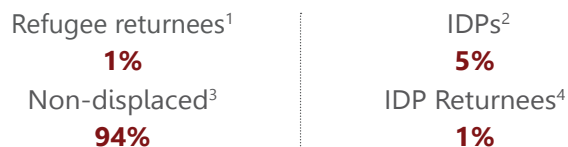

Demographics

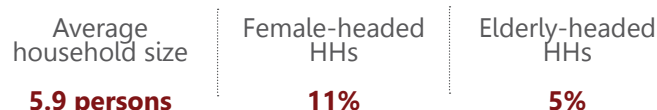

Reported HHs composition, disaggregated by age and gender:

HHs surveyed reported the following displacement statuses:

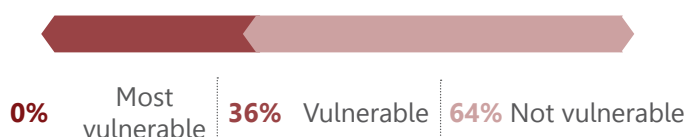

Key demographics of the interviewed HHs:

Household Vulnerability Factors

Reported household vulnerability category, based on key indicators determined by the ES/NFI Cluster criteria.⁵

0% of assessed HHs reported that their head of household (hohh) is either women or child without other adult males in the HH.

20% of assessed HHs reported a dependency ratio⁶ of 8 or more.

3% of assessed HHs that reported no adult male of working age or adult working female in the HH.

42% of assessed HHs reported that their hohh had a disability, was suffering from a chronic illness, or was an older person.

60%

of assessed HHs reported that, including hohh, one or more members had a disability or chronic illness.

Displacement

The top 3 most common provinces assessed IDP HHs reportedly lived before their first displacement were:

Average duration of displacement reported by assessed IDP HHs since their HH had first displaced: **2.1 year(s)**

Assessed IDP HHs by reported length of time, on average, they had been living in their current location: **0.8 year(s)**

21.3 year(s) Average reported length of time since assessed returnee HHs fled Afghanistan for the first time.

14.8 year(s) Assessed returnee HHs by reported length of time, on average, since they last returned to Afghanistan

Assessed IDP returnee HHs by reported length of time since they last fled this location: **14.2 year(s)**

Assessed IDP returnee HHs by reported length of time since they returned to this location: **7.4 year(s)**

1. Refugee returnees: HHs whose living in their area of origin and were forcibly displaced and fled to another country and have since returned home.

2. IDPs: HHs who had been displaced from their area of origin and who were forcibly displaced from their homes due to conflict or environmental shocks and fled to another location in Afghanistan.

3. Non-displaced: HHs who were living in their area of origin and had not been displaced or HHs who were not living in their area of origin but had moved to another part of Afghanistan for work or to be near family.

4. IDP Returnees: HHs who were living in their area of origin and who previously were forcibly displaced and fled to another location in Afghanistan and then returned home.

5. The ES/NFI cluster maintains a set of vulnerability criteria based on 11 indicators which have the following categories: a scoring system of 0-24: Not Sufficiently Vulnerable (0-8); Vulnerable (9-16); and the Most Vulnerable (17-24).

6. Dependency ratio equated to total number of household members / (sum of adult males (age 18 to 59) and female breadwinners - sum of disabled adult males and disabled female breadwinners).

House/Apartment General Information

Assessed HHs by reported accommodation type:

100% House⁷ **0%** Apartment⁸

Top 5 reported types of construction materials used for construction of the house/apartment, by % of HHs:

| | |
|------------------------------------|------------|
| Permanent mud | 60% |
| Permanent sun-dried bricks | 39% |
| Permanent firebricks | 1% |
| Permanent stone | 0% |
| Transitional (constructed by NGOs) | 0% |

Average duration of stay in current house/apartment reported by assessed HHs:

| | |
|---------------------------------|-------------------------------|
| 1% Less than 1 month | 15% 2 years to 5 years |
| 29% 1 month to 6 months | 2% 5 years to 10 years |
| 31% 6 months to 1 year | 0% 10 years or more |
| 23% 1 year up to 2 years | 0% Always lived here |

Average reported number of individuals living in house/apartment: **5.8**

Average reported number of rooms available in house/apartment: **1.7**

66% of assessed HHs reported there was a separate room for kitchen in their shelter.

20% of assessed HHs reported that they had separate rooms available in their shelter for male and female household members.

4% of assessed HHs reported that they owned livestock.

Assessed HHs living in houses on average paid the following monthly rent:⁹ **1,604** AFN

No assessed HH was living in apartments in Bamyan.

100% of assessed HHs reported paying for their rent in Afghani currency.

House/apartment Service Costs

Of those HHs who reported that they were paying for the services, their average reported expenditure⁹ for each utility is:¹⁰

| | | | |
|----------------|------------------|---------------------|----------------|
| Water supply | 318 AFN | Internet/television | 0 AFN |
| Electricity | 334 AFN | Parking | 0 AFN |
| Fuel/heating | 3,281 AFN | Communal services | 105 AFN |
| Waste disposal | 407 AFN | Other bills | 46 AFN |

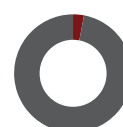

Insurance/Deposit

100% of assessed HHs reported not having insurance for their house/apartment.

3%

of assessed HHs having to pay a deposit to rent their house/apartment.

Average amount of money households reported having to spent on a deposit for their house/apartment:⁹ **6,769** AFN

3% of assessed HHs reported that they were living in an open, emergency, or makeshift shelter.¹¹

Accommodation Arrangements

Assessed HHs by reported type of rental agreement they had for their house/apartment:

| | |
|------------|--|
| 30% | Written agreement with the house/apartment owner |
| 0% | A written agreement with the property dealer |
| 0% | Letter with stamp from Community Leader |
| 69% | Verbal agreement |

HHs by average reported length of time that the rental agreement is valid:

| | | | |
|------------|---------------|------------|--------------------|
| 0% | 1 month | 41% | 6 months to 1 year |
| 4% | 1 to 3 months | 38% | More than 1 year |
| 10% | 3 to 6 months | 6% | Not to answer |

7. House: a structure for living with 1-2 floors and a yard.

8. Apartment: a structure with many different living units inside of the structure, with more than 2 floors and no yard.

9. All costs, income and debt were reported in Afghani (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury](#), UN

[Operational Rates of Exchange](#), 01 February 2022.

10. Respondent could select more than one response.

11. Shelter type was unfinished or shelter damage level was either fully destroyed, makeshift, with no solid or permanent materials, or bad (significant structural damage, including collapsed walls or partly collapsed floors or roof).

6% of assessed HHs reported residing with or hosting other HHs:

7% of assessed HHs reported being hosted by another HH.

Average number of rooms assessed HHs reported that they were residing: **1.5**

91% of assessed HHs reported that all of the rooms in the house/apartment were covered by their rent:

Average size of the house/apartment in square meters, as reported by households: **167**

14% of assessed household reported that they had to pay at least 1 month of rent in advance.
On average, **3** months of rent were reported to need to be paid in advance.

Assessed households reported that rent was paid to:

| | |
|-------------------------------|---------------------------------------|
| 88% The owner | 1% Representative of the owner |
| 0% The property dealer | 11% Relative of the owner |

% of assessed HHs by who they would go to in the event of a dispute with the landlord or property agent:

| | |
|------------------------------------|-----------------------------------|
| 83% Deal with it themselves | 0% Religious courts |
| 0% Police | 16% Community leadership |
| 0% Civil courts | 2% Religious leader/mullah |

Shelter Selection

% of assessed HHs by reported main reasons that they chose this house/apartment:

| | |
|---|--|
| 7% Only available house/apartment | 4% People I know live here |
| 65% Most affordable | 8% Family/relatives lives here |
| 7% Wanted to live here | 0% House/apartment rent was paid by someone |
| 9% Facilities (services) are near here | |

Top 4 most reported answers from assessed HHs of how they found their house/apartment:

| | |
|------------------------------|------------|
| Family or relative | 58% |
| Friend or colleague | 30% |
| Poster or Wall advertisement | 4% |
| Community leader/elder | 4% |

15% of assessed HHs reportedly faced challenges finding a house/apartment.

Assessed HHs faced the following challenges when finding a house/apartment:¹⁰

| | |
|---|------------|
| All available houses/apartments were too expensive | 87% |
| No houses/apartments were available to rent | 46% |
| Property agents did not want to rent to me or my family | 0% |
| Host community did not want us here | 0% |
| Did not know how to find a place to rent | 12% |
| Had never rented before | 16% |

Building/Rental Area Conditions

% of HHs reported condition of the house overall:

| | |
|--------------------------------|------------------------------------|
| 21% Good (no damage) | 3% Bad (significant damage) |
| 56% Minor (some damage) | 0% Fully destroyed |
| 21% Moderate (damage) | |

Building/Rental Area Materials

Most commonly reported building materials used in house/apartment roof construction by HHs:¹⁰

| | |
|-----------------------|----------------------------|
| 98% Wood/poles | 2% Steel I-beam |
| 7% Bricks | 1% CGI Iron sheet |
| 3% Concrete | 1% Asphalt (Isogam) |
| 2% Reeds | |

Top 4 most commonly reported building materials used in house/apartment wall construction:¹⁰

| | |
|--------------------------------|---------------------------------|
| 73% Packed Mud (Pakhsa) | 54% Mud Plaster (Kaghil) |
| 57% Bricks | 46% Stone |

Top 4 most commonly reported building materials used in house/apartment floor construction:¹⁰

| | |
|---------------------------------|-------------------------------|
| 97% Mud Plaster (Kaghil) | 11% Stone |
| 28% Gypsum/Plaster | 9% Packed Mud (Pakhsa) |

Service Access

96% of assessed HHs reported that they had access to water for drinking, cooking, and bathing.

Top 5 most reported answers from assessed HHs with enough water by main source of water for domestic use:

| | |
|-------------------------------|------------------------|
| 75% Pipe Scheme | 1% Stream/River |
| 19% Dug well | 0% Spring |
| 5% Hand pump/bore well | |

28% of the assessed households reported that their primary water source was located inside the building they lived in.

% of assessed HHs that reporting access to hand-washing facilities:¹⁰

| | |
|---|---|
| 71% Yes, inside the house/apartment | 1% Yes, but only outside of rental area/building |
| 24% Yes, in rental area/building, but not inside house/apartment | 10% No, none available |

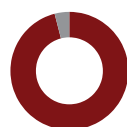

Assessed households by reported kind of sanitation facility (latrine/toilet) that they used:

| | |
|---------------------------------------|-----------------------------|
| 20% Flush or pour/flush toilet | 28% Open hole |
| 17% Pit latrine with a slab | 0% No latrine/toilet |
| 36% Pit latrine without a slab | |

41%

of the assessed HHs reported with sharing latrine/toilet.

96% of assessed HHs reported with poor asset holdings.

% of assessed HHs reported currently have the following non-food items in their HHs.

| | |
|--|------------|
| Sleeping mats or mattress | 84% |
| Kitchen sets (cooking pots and stainless steel cups) | 78% |
| Water storage containers (cans, buckets with lid, etc.) | 60% |
| Heating devices (gas cylinder / traditional bukhari stove) | 92% |
| Plastic tarpaulin | 14% |
| Winter clothing, including for all children | 26% |

Energy and Heating

% of assessed HHs by reported main fuel source for heating:

| | |
|----------------------|------------|
| Wood, bushes | 8% |
| Coal | 80% |
| Liquid petroleum gas | 0% |
| Charcoal | 2% |
| Electricity | 0% |

February 2022

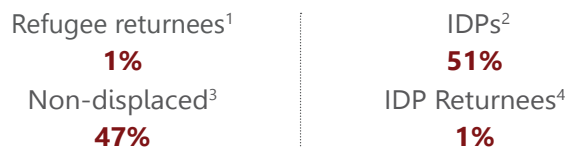

Demographics

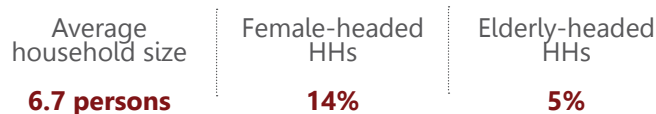

Reported HHs composition, disaggregated by age and gender:

HHs surveyed reported the following displacement statuses:

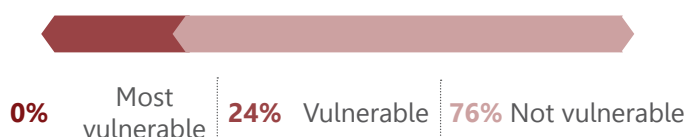

Key demographics of the interviewed HHs:

Household Vulnerability Factors

Reported household vulnerability category, based on key indicators determined by the ES/NFI Cluster criteria.⁵

0% of assessed HHs reported that their head of household (hohh) is either women or child without other adult males in the HH.

20% of assessed HHs reported a dependency ratio⁶ of 8 or more.

2% of assessed HHs that reported no adult male of working age or adult working female in the HH.

35% of assessed HHs reported that their hohh had a disability, was suffering from a chronic illness, or was an older person.

54%

of assessed HHs reported that, including hohh, one or more members had a disability or chronic illness.

Displacement

The top 3 most common provinces assessed IDP HHs reportedly lived before their first displacement were:

Average duration of displacement reported by assessed IDP HHs since their HH had first displaced: **6.5 year(s)**

Assessed IDP HHs by reported length of time, on average, they had been living in their current location: **2.1 year(s)**

8.8 year(s) Average reported length of time since assessed returnee HHs fled Afghanistan for the first time.

3.1 year(s) Assessed returnee HHs by reported length of time, on average, since they last returned to Afghanistan

Assessed IDP returnee HHs by reported length of time since they last fled this location: **3.7 year(s)**

Assessed IDP returnee HHs by reported length of time since they returned to this location: **3 year(s)**

1. Refugee returnees: HHs whose living in their area of origin and were forcibly displaced and fled to another country and have since returned home.
2. IDPs: HHs who had been displaced from their area of origin and who were forcibly displaced from their homes due to conflict or environmental shocks and fled to another location in Afghanistan.
3. Non-displaced: HHs who were living in their area of origin and had not been displaced or HHs who were not living in their area of origin but had moved to another part of Afghanistan for work or to be near family.

4. IDP Returnees: HHs who were living in their area of origin and who previously were forcibly displaced and fled to another location in Afghanistan and then returned home.
5. The ES/NFI cluster maintains a set of vulnerability criteria based on 11 indicators which have the following categories: a scoring system of 0-24: Not Sufficiently Vulnerable (0-8); Vulnerable (9-16); and the Most Vulnerable (17-24).
6. Dependency ratio equated to total number of household members / (sum of adult males (age 18 to 59) and female breadwinners - sum of disabled adult males and disabled female breadwinners).

House/Apartment General Information

Assessed HHs by reported accommodation type:

81% House⁷ **19%** Apartment⁸

Top 5 reported types of construction materials used for construction of the house/apartment, by % of HHs:

| | |
|----------------------------|------------|
| Permanent concrete | 30% |
| Permanent firebricks | 29% |
| Permanent sun-dried bricks | 15% |
| Permanent mud | 14% |
| Permanent concrete blocks | 10% |

Average duration of stay in current house/apartment reported by assessed HHs:

| | |
|---------------------------------|-------------------------------|
| 1% Less than 1 month | 18% 2 years to 5 years |
| 25% 1 month to 6 months | 5% 5 years to 10 years |
| 24% 6 months to 1 year | 1% 10 years or more |
| 26% 1 year up to 2 years | 0% Always lived here |

Average reported number of individuals living in house/apartment: **6.6**

Average reported number of rooms available in house/apartment: **2.3**

95% of assessed HHs reported there was a separate room for kitchen in their shelter.

58% of assessed HHs reported that they had separate rooms available in their shelter for male and female household members.

2% of assessed HHs reported that they owned livestock.

Assessed HHs living in houses on average paid the following monthly rent:⁹ **2,916** AFN

Assessed HHs living in apartments on average paid the following monthly rent:⁹ **4,489** AFN

100% of assessed HHs reported paying for their rent in Afghani currency.

House/apartment Service Costs

Of those HHs who reported that they were paying for the services, their average reported expenditure⁹ for each utility is:¹⁰

| | | | |
|----------------|------------------|---------------------|----------------|
| Water supply | 528 AFN | Internet/television | 604 AFN |
| Electricity | 1,359 AFN | Parking | 0 AFN |
| Fuel/heating | 978 AFN | Communal services | 126 AFN |
| Waste disposal | 509 AFN | Other bills | 0 AFN |

Insurance/Deposit

100% of assessed HHs reported not having insurance for their house/apartment.

7% of assessed HHs having to pay a deposit to rent their house/apartment.

Average amount of money households reported having to spent on a deposit for their house/apartment:⁹ **7,056** AFN

8% of assessed HHs reported that they were living in an open, emergency, or makeshift shelter.¹¹

Accommodation Arrangements

Assessed HHs by reported type of rental agreement they had for their house/apartment:

| | |
|------------|--|
| 34% | Written agreement with the house/apartment owner |
| 49% | A written agreement with the property dealer |
| 0% | Letter with stamp from Community Leader |
| 17% | Verbal agreement |

HHs by average reported length of time that the rental agreement is valid:

| | | | |
|------------|---------------|------------|--------------------|
| 0% | 1 month | 40% | 6 months to 1 year |
| 2% | 1 to 3 months | 47% | More than 1 year |
| 11% | 3 to 6 months | 0% | Not to answer |

7. House: a structure for living with 1-2 floors and a yard.

8. Apartment: a structure with many different living units inside of the structure, with more than 2 floors and no yard.

9. All costs, income and debt were reported in Afghani (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury](#), UN

[Operational Rates of Exchange](#), 01 February 2022.

10. Respondent could select more than one response.

11. Shelter type was unfinished or shelter damage level was either fully destroyed, makeshift, with no solid or permanent materials, or bad (significant structural damage, including collapsed walls or partly collapsed floors or roof).

18% of assessed HHs reported residing with or hosting other HHs:

15% of assessed HHs reported being hosted by another HH.

Average number of rooms assessed HHs reported that they were residing: **2.3**

100% of assessed HHs reported that all of the rooms in the house/apartment were covered by their rent:

Average size of the house/apartment in square meters, as reported by households: **138**

11% of assessed household reported that they had to pay at least 1 month of rent in advance.
On average, **2** months of rent were reported to need to be paid in advance.

Assessed households reported that rent was paid to:

| | |
|--------------------------------|---------------------------------------|
| 73% The owner | 7% Representative of the owner |
| 16% The property dealer | 5% Relative of the owner |

% of assessed HHs by who they would go to in the event of a dispute with the landlord or property agent:

| | |
|------------------------------------|-----------------------------------|
| 82% Deal with it themselves | 0% Religious courts |
| 1% Police | 14% Community leadership |
| 0% Civil courts | 3% Religious leader/mullah |

Shelter Selection

% of assessed HHs by reported main reasons that they chose this house/apartment:

| | |
|---|--|
| 6% Only available house/apartment | 7% People I know live here |
| 65% Most affordable | 6% Family/relatives lives here |
| 8% Wanted to live here | 0% House/apartment rent was paid by someone |
| 8% Facilities (services) are near here | |

Top 4 most reported answers from assessed HHs of how they found their house/apartment:

| | |
|---------------------------------|------------|
| Through a property dealer/agent | 51% |
| Family or relative | 37% |
| Friend or colleague | 11% |
| Community leader/elder | 1% |

53% of assessed HHs reportedly faced challenges finding a house/apartment.

Assessed HHs faced the following challenges when finding a house/apartment:¹⁰

| | |
|---|------------|
| All available houses/apartments were too expensive | 84% |
| No houses/apartments were available to rent | 20% |
| Property agents did not want to rent to me or my family | 0% |
| Host community did not want us here | 1% |
| Did not know how to find a place to rent | 4% |
| Had never rented before | 1% |

Building/Rental Area Conditions

% of HHs reported condition of the house overall:

| | |
|--------------------------------|------------------------------------|
| 18% Good (no damage) | 6% Bad (significant damage) |
| 40% Minor (some damage) | 0% Fully destroyed |
| 36% Moderate (damage) | |

Building/Rental Area Materials

Most commonly reported building materials used in house/apartment roof construction by HHs:¹⁰

| | |
|----------------------|----------------------------|
| 8% Wood/poles | 35% Steel I-beam |
| 54% Bricks | 0% CGI Iron sheet |
| 39% Concrete | 5% Asphalt (Isogam) |
| 0% Reeds | |

Top 4 most commonly reported building materials used in house/apartment wall construction:¹⁰

| | |
|---------------------------------|---------------------------|
| 92% Bricks | 44% Gypsum/Plaster |
| 49% Mud Plaster (Kaghil) | 24% Concrete |

Top 4 most commonly reported building materials used in house/apartment floor construction:¹⁰

| | |
|---------------------------------|--------------------------------|
| 68% Concrete | 12% Packed Mud (Pakhsa) |
| 28% Mud Plaster (Kaghil) | 8% Bricks |

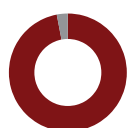

Service Access

96% of assessed HHs reported that they had access to water for drinking, cooking, and bathing.

Top 5 most reported answers from assessed HHs with enough water by main source of water for domestic use:

| | |
|-------------------------------|--|
| 69% Pipe Scheme | 0% Spring |
| 27% Dug well | 0% Purchasing water/ water tanker |
| 4% Hand pump/bore well | |

97% of the assessed households reported that their primary water source was located inside the building they lived in.

% of assessed HHs that reporting access to hand-washing facilities:¹⁰

| | |
|--|---|
| 85% Yes, inside the house/ apartment | 1% Yes, but only outside of rental area/building |
| 13% Yes, in rental area/ building, but not inside house/apartment | 2% No, none available |

Assessed households by reported kind of sanitation facility (latrine/toilet) that they used:

| | |
|--------------------------------------|-----------------------------|
| 1% Flush or pour/flush toilet | 2% Open hole |
| 88% Pit latrine with a slab | 0% No latrine/toilet |
| 8% Pit latrine without a slab | |

31%

of the assessed HHs reported with sharing latrine/toilet.

90% of assessed HHs reported with poor asset holdings.

% of assessed HHs reported currently have the following non-food items in their HHs.

| | |
|--|------------|
| Sleeping mats or mattress | 97% |
| Kitchen sets (cooking pots and stainless steel cups) | 94% |
| Water storage containers (cans, buckets with lid, etc.) | 81% |
| Heating devices (gas cylinder / traditional bukhari stove) | 73% |
| Plastic tarpaulin | 18% |
| Winter clothing, including for all children | 68% |

Energy and Heating

% of assessed HHs by reported main fuel source for heating:

| | |
|----------------------|------------|
| Wood, bushes | 32% |
| Coal | 3% |
| Liquid petroleum gas | 3% |
| Charcoal | 17% |
| Electricity | 37% |
| Dung | 1% |
| Waste | 7% |

% of assessed HHs by reported main fuel sources for cooking:

| | |
|----------------------|------------|
| Wood, bushes | 25% |
| Coal | 0% |
| Liquid petroleum gas | 68% |
| Charcoal | 2% |
| Electricity | 0% |
| Dung | 1% |
| Waste | 3% |

100% of assessed HHs reported that they had access to electricity.

Of HHs reporting access to electricity, the main reported sources were:

| | |
|------------------------------|---------------------|
| 97% Power lines/ grid | 0% Generator |
| 0% Hydroelectric dam | 0% Battery |
| 3% Solar power | 0% None |

Waste Disposal

% of assessed HHs by reported main solid waste disposal methods:

| | |
|----------------------------|------------|
| Garbage collection service | 62% |
| Burned | 4% |
| Buried | 2% |
| Community containers | 22% |
| Throw in open field | 10% |

% of assessed HHs by reported main liquid waste disposal methods:

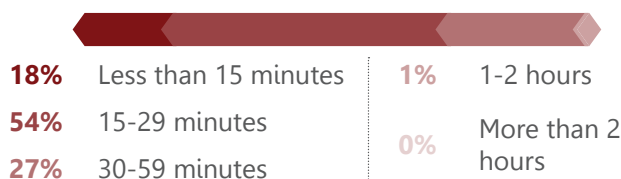

| | |
|-------------------------------|------------|
| Septic tank | 7% |
| Open drainage/street channels | 32% |
| Municipal sewage network | 34% |
| Simple cesspit/hole in ground | 27% |
| Dump on ground | 1% |

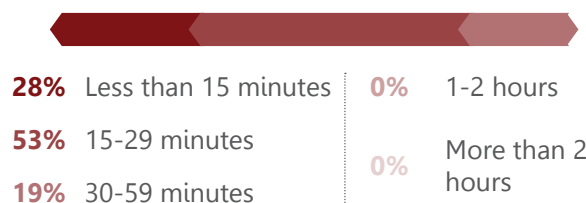

Other Service Access

92% assessed HHs reported that a health centre was accessible from their house/apartment:

Of those HHs who reported having access to a health center, the average time to the facility from their homes was:

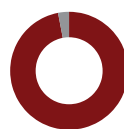

% of assessed HHs reported HHs access to school, by school distance:

96%

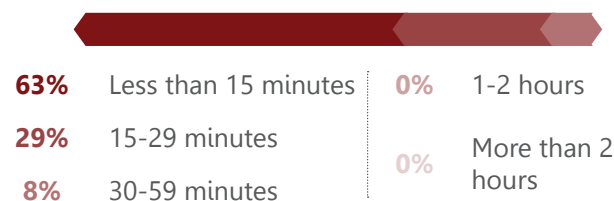

of assessed HHs reported having access to school. The following schools types were accessible:¹⁰

| | |
|----------------------------------|------------|
| Primary school | 46% |
| High school | 85% |
| Secondary school | 55% |
| Religious madrassa ¹² | 38% |
| Community based education | 2% |
| Technical training centre | 2% |

97% of assessed HHs reported having access to a market.

Assessed HHs with access to a market, by reported distance:

Livelihoods and Income

Average number of breadwinners reported per assessed households: **1.2**

Average number of female breadwinners reported per assessed households: **0.1**

13% Average of assessed households reported having at least one female breadwinner:

Top 5 sources of income, in last 30 days, reported by assessed households:¹⁰

| | |
|--------------------------------------|------------|
| Unskilled daily labour / no contract | 64% |
| Skilled daily labour / no contract | 16% |
| Formal employment / with contract | 10% |
| Business / sale of goods / services | 9% |
| None | 1% |

12. A separate religious school that is separate from a mosque.

Average amount of total monthly cash income reported by assessed households:⁹

7,199
AFN

Of households reporting that they received income, the top 5 main sources of cash were:¹⁰

| | |
|-----------------------------|------------|
| Income through work/labour | 76% |
| Borrow money / take on debt | 37% |
| None | 10% |
| Humanitarian Aid | 7% |
| Selling personal belongings | 4% |

86% of assessed HHs reported that they had debt.

For the HHs in debt, the average household debt amounted to:⁹

38,689
AFN

41% of assessed HHs reported that they were relying only on borrowing, begging, or Zakat:¹³

75% of assessed HHs reported relying on casual labour by one member of the household.

10% of assessed HHs reported that they were living without any source of livelihoods or income-generating activities.

Cash Access and Rental Methods

43% of assessed HHs reported not paying rent on time each month.

Top 5 reasons assessed HHs were unable to pay their rent on time:¹⁰

| | |
|--|------------|
| Breadwinners have not been paid on time | 77% |
| I had no money/I was unemployed | 19% |
| I was not physically present to pay for it | 13% |
| Owner/property agent was not present | 4% |
| Rent increased in price | 2% |

% of assessed HHs reported that their rent had changed in the following ways in the previous year:

Assessed HHs reported changes in rent amount since the previous year.

749 AFN

Methods of rental payment reported by assessed HHs:¹⁰

| | |
|---------------------------|--------------------------------------|
| 100% Cash (direct) | 0% Credit/loan |
| 0% Bank account | 0% Hawala ¹⁶ |
| 0% Mobile transfer | 0% In-kind (crops, materials) |

67% of assessed HHs reported that they needed documents to rent house/apartment.

% of assessed HHs by the type of documents needed to sign a rental agreement:¹⁰

| | |
|------------------------------------|-------------------------------|
| 94% Tazkera ¹⁴ | 2% Employment contract |
| 33% Letter of guarantee | 0% Bank statement |
| 55% Witness / sign document | 0% Nothing |

52% of assessed HHs reported that they received a receipt/proof of payment for rent payment.

Assessed HHs by most reported preferred method to receive cash assistance (for any purpose):

| | |
|---------------------------|--------------------------------------|
| 99% Cash (direct) | 0% Credit/loan |
| 0% Bank account | 0% Hawala ¹⁵ |
| 0% Mobile transfer | 0% In-kind (crops, materials) |

13. Payment made annually under Islamic law on certain kinds of property and used for charitable and religious purposes.

14. Tazkera: Afghanistan national identification card.

15. A Hawala system refers to an informal channel for transferring funds from one location to another through service providers.

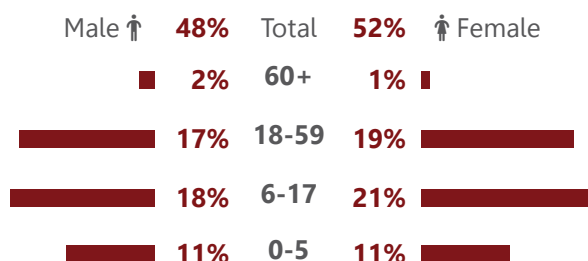

Households Rental Assessment Kandahar Municipality Kandahar Province, Afghanistan

February 2022

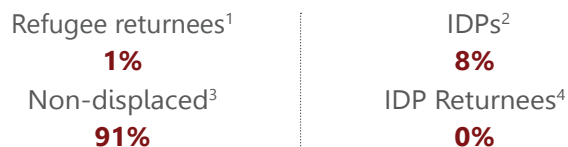

Demographics

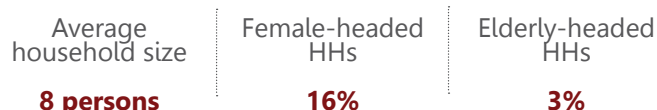

Reported HHs composition, disaggregated by age and gender:

HHs surveyed reported the following displacement statuses:

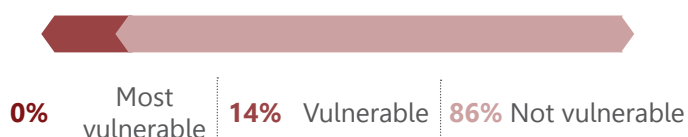

Key demographics of the interviewed HHs:

Household Vulnerability Factors

Reported household vulnerability category, based on key indicators determined by the ES/NFI Cluster criteria.⁵

0% of assessed HHs reported that their head of household (hohh) is either women or child without other adult males in the HH.

29% of assessed HHs reported a dependency ratio⁶ of 8 or more.

3% of assessed HHs that reported no adult male of working age or adult working female in the HH.

14% of assessed HHs reported that their hohh had a disability, was suffering from a chronic illness, or was an older person.

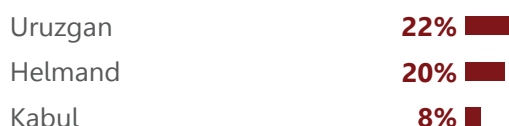

18%

of assessed HHs reported that, including hohh, one or more members had a disability or chronic illness.

Displacement

The top 3 most common provinces assessed IDP HHs reportedly lived before their first displacement were:

Average duration of displacement reported by assessed IDP HHs since their HH had first displaced: **6.2 year(s)**

Assessed IDP HHs by reported length of time, on average, they had been living in their current location: **3 year(s)**

3.9 year(s) Average reported length of time since assessed returnee HHs fled Afghanistan for the first time.

0.8 year(s) Assessed returnee HHs by reported length of time, on average, since they last returned to Afghanistan

Assessed IDP returnee HHs by reported length of time since they last fled this location: **4 year(s)**

Assessed IDP returnee HHs by reported length of time since they returned to this location: **1.2 year(s)**

1. Refugee returnees: HHs whose living in their area of origin and were forcibly displaced and fled to another country and have since returned home.

2. IDPs: HHs who had been displaced from their area of origin and who were forcibly displaced from their homes due to conflict or environmental shocks and fled to another location in Afghanistan.

3. Non-displaced: HHs who were living in their area of origin and had not been displaced or HHs who were not living in their area of origin but had moved to another part of Afghanistan for work or to be near family.

4. IDP Returnees: HHs who were living in their area of origin and who previously were forcibly displaced and fled to another location in Afghanistan and then returned home.

5. The ES/NFI cluster maintains a set of vulnerability criteria based on 11 indicators which have the following categories: a scoring system of 0-24: Not Sufficiently Vulnerable (0-8); Vulnerable (9-16); and the Most Vulnerable (17-24).

6. Dependency ratio equated to total number of household members / (sum of adult males (age 18 to 59) and female breadwinners - sum of disabled adult males and disabled female breadwinners).

House/Apartment General Information

Assessed HHs by reported accommodation type:

98% House⁷ **2%** Apartment⁸

Top 5 reported types of construction materials used for construction of the house/apartment, by % of HHs:

| | |
|----------------------------|------------|
| Permanent mud | 59% |
| Permanent concrete | 14% |
| Permanent firebricks | 14% |
| Permanent sun-dried bricks | 13% |
| Unfinished house/apartment | 0% |

Average duration of stay in current house/apartment reported by assessed HHs:

| | |
|---------------------------------|-------------------------------|
| 3% Less than 1 month | 12% 2 years to 5 years |
| 24% 1 month to 6 months | 6% 5 years to 10 years |
| 26% 6 months to 1 year | 1% 10 years or more |
| 29% 1 year up to 2 years | 1% Always lived here |

Average reported number of individuals living in house/apartment: **7.9**

Average reported number of rooms available in house/apartment: **3.1**

90% of assessed HHs reported there was a separate room for kitchen in their shelter.

45% of assessed HHs reported that they had separate rooms available in their shelter for male and female household members.

3% of assessed HHs reported that they owned livestock.

Assessed HHs living in houses on average paid the following monthly rent:⁹ **3,596** AFN

Assessed HHs living in apartments on average paid the following monthly rent:⁹ **6,650** AFN

100% of assessed HHs reported paying for their rent in Afghani currency.

House/apartment Service Costs

Of those HHs who reported that they were paying for the services, their average reported expenditure⁹ for each utility is:¹⁰

| | | | |
|----------------|----------------|---------------------|----------------|
| Water supply | 473 AFN | Internet/television | 0 AFN |
| Electricity | 391 AFN | Parking | 0 AFN |
| Fuel/heating | 997 AFN | Communal services | 583 AFN |
| Waste disposal | 170 AFN | Other bills | 0 AFN |

Insurance/Deposit

100% of assessed HHs reported not having insurance for their house/apartment.

3% of assessed HHs having to pay a deposit to rent their house/apartment.

Average amount of money households reported having to spent on a deposit for their house/apartment:⁹ **10,625** AFN

11% of assessed HHs reported that they were living in an open, emergency, or makeshift shelter.¹¹

Accommodation Arrangements

Assessed HHs by reported type of rental agreement they had for their house/apartment:

| | |
|------------|--|
| 91% | Written agreement with the house/apartment owner |
| 8% | A written agreement with the property dealer |
| 0% | Letter with stamp from Community Leader |
| 2% | Verbal agreement |

HHs by average reported length of time that the rental agreement is valid:

| | | | |
|------------|---------------|------------|--------------------|
| 0% | 1 month | 37% | 6 months to 1 year |
| 21% | 1 to 3 months | 20% | More than 1 year |
| 23% | 3 to 6 months | 0% | Not to answer |

7. House: a structure for living with 1-2 floors and a yard.

8. Apartment: a structure with many different living units inside of the structure, with more than 2 floors and no yard.

9. All costs, income and debt were reported in Afghani (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury, UN](#)

[Operational Rates of Exchange](#), 01 February 2022.

10. Respondent could select more than one response.

11. Shelter type was unfinished or shelter damage level was either fully destroyed, makeshift, with no solid or permanent materials, or bad (significant structural damage, including collapsed walls or partly collapsed floors or roof).

2% of assessed HHs reported residing with or hosting other HHs:

0% of assessed HHs reported being hosted by another HH.

Average number of rooms assessed HHs reported that they were residing: **3**

100% of assessed HHs reported that all of the rooms in the house/apartment were covered by their rent:

Average size of the house/apartment in square meters, as reported by households: **195**

23% of assessed household reported that they had to pay at least 1 month of rent in advance.
On average, **2** months of rent were reported to need to be paid in advance.

Assessed households reported that rent was paid to:

| | |
|-------------------------------|---------------------------------------|
| 95% The owner | 2% Representative of the owner |
| 4% The property dealer | 0% Relative of the owner |

% of assessed HHs by who they would go to in the event of a dispute with the landlord or property agent:

| | |
|------------------------------------|------------------------------------|
| 32% Deal with it themselves | 2% Religious courts |
| 0% Police | 26% Community leadership |
| 1% Civil courts | 38% Religious leader/mullah |

Shelter Selection

% of assessed HHs by reported main reasons that they chose this house/apartment:

| | |
|---|--|
| 4% Only available house/apartment | 1% People I know live here |
| 85% Most affordable | 1% Family/relatives lives here |
| 2% Wanted to live here | 0% House/apartment rent was paid by someone |
| 8% Facilities (services) are near here | |

Top 4 most reported answers from assessed HHs of how they found their house/apartment:

| | |
|---------------------------------|------------|
| Family or relative | 47% |
| Through a property dealer/agent | 32% |
| Friend or colleague | 20% |
| Community leader/elder | 1% |

63% of assessed HHs reportedly faced challenges finding a house/apartment.

Assessed HHs faced the following challenges when finding a house/apartment:¹⁰

| | |
|---|------------|
| All available houses/apartments were too expensive | 68% |
| No houses/apartments were available to rent | 41% |
| Property agents did not want to rent to me or my family | 2% |
| Host community did not want us here | 1% |
| Did not know how to find a place to rent | 6% |
| Had never rented before | 4% |

Building/Rental Area Conditions

% of HHs reported condition of the house overall:

| | |
|--------------------------------|-------------------------------------|
| 32% Good (no damage) | 11% Bad (significant damage) |
| 34% Minor (some damage) | 1% Fully destroyed |
| 23% Moderate (damage) | |

Building/Rental Area Materials

Most commonly reported building materials used in house/apartment roof construction by HHs:¹⁰

| | |
|-----------------------|----------------------------|
| 40% Wood/poles | 40% Steel I-beam |
| 55% Bricks | 1% CGI Iron sheet |
| 19% Concrete | 0% Asphalt (Isogam) |
| 4% Reeds | |

Top 4 most commonly reported building materials used in house/apartment wall construction:¹⁰

| | |
|--------------------------------|---------------------------------|
| 61% Bricks | 30% Mud Plaster (Kaghil) |
| 34% Packed Mud (Pakhsa) | 13% Gypsum/Plaster |

Top 4 most commonly reported building materials used in house/apartment floor construction:¹⁰

| | |
|---------------------------------|--------------------------------|
| 40% Mud Plaster (Kaghil) | 21% Packed Mud (Pakhsa) |
| 24% Concrete | 14% Bricks |

Service Access

92% of assessed HHs reported that they had access to water for drinking, cooking, and bathing.

Top 5 most reported answers from assessed HHs with enough water by main source of water for domestic use:

| | |
|---|------------------------|
| 64% Hand pump/bore well | 1% Stream/River |
| 21% Purchasing water/ water tanker | 1% Dug well |
| 13% Pipe Scheme | |

67% of the assessed households reported that their primary water source was located inside the building they lived in.

% of assessed HHs that reporting access to hand-washing facilities:¹⁰

| | |
|---|---|
| 87% Yes, inside the house/ apartment | 3% Yes, but only outside of rental area/building |
| 9% Yes, in rental area/ building, but not inside house/apartment | 2% No, none available |

Assessed households by reported kind of sanitation facility (latrine/toilet) that they used:

| | |
|---------------------------------------|-----------------------------|
| 24% Flush or pour/flush toilet | 8% Open hole |
| 57% Pit latrine with a slab | 1% No latrine/toilet |
| 11% Pit latrine without a slab | |

13%

of the assessed HHs reported with sharing latrine/toilet.

81% of assessed HHs reported with poor asset holdings.

% of assessed HHs reported currently have the following non-food items in their HHs.

| | |
|--|------------|
| Sleeping mats or mattress | 91% |
| Kitchen sets (cooking pots and stainless steel cups) | 97% |
| Water storage containers (cans, buckets with lid, etc.) | 92% |
| Heating devices (gas cylinder / traditional bukhari stove) | 61% |
| Plastic tarpaulin | 47% |
| Winter clothing, including for all children | 41% |

Energy and Heating

% of assessed HHs by reported main fuel source for heating:

| | |
|----------------------|------------|
| Wood, bushes | 24% |
| Coal | 3% |
| Liquid petroleum gas | 35% |
| Charcoal | 31% |
| Electricity | 0% |
| Dung | 2% |
| Waste | 6% |

% of assessed HHs by reported main fuel sources for cooking:

| | |
|----------------------|------------|
| Wood, bushes | 27% |
| Coal | 0% |
| Liquid petroleum gas | 55% |
| Charcoal | 2% |
| Electricity | 0% |
| Dung | 8% |
| Waste | 8% |

89% of assessed HHs reported that they had access to electricity.

Of HHs reporting access to electricity, the main reported sources were:

| | |
|------------------------------|---------------------|
| 83% Power lines/ grid | 0% Generator |
| 0% Hydroelectric dam | 14% Battery |
| 3% Solar power | 0% None |

Waste Disposal

% of assessed HHs by reported main solid waste disposal methods:

| | |
|----------------------------|--------------|
| Garbage collection service | 7% ■ |
| Burned | 5% ■ |
| Buried | 1% |
| Community containers | 39% ■ |
| Throw in open field | 48% ■ |

Livelihoods and Income

Average number of breadwinners reported per assessed households: **1.2**

Average number of female breadwinners reported per assessed households: **0.1**

12% Average of assessed households reported having at least one female breadwinner:

Top 5 sources of income, in last 30 days, reported by assessed households:¹⁰

| | |
|--------------------------------------|--------------|
| Unskilled daily labour / no contract | 87% ■ |
| Business / sale of goods / services | 5% ■ |
| Skilled daily labour / no contract | 5% ■ |
| Formal employment / with contract | 3% |
| Cash crop farming | 1% |

12. A separate religious school that is separate from a mosque.

Average amount of total monthly cash income reported by assessed households:⁹

7,417
AFN

Of households reporting that they received income, the top 5 main sources of cash were:¹⁰

| | |
|-----------------------------|------------|
| Income through work/labour | 98% |
| Borrow money / take on debt | 30% |
| Selling personal belongings | 7% |
| Humanitarian Aid | 6% |
| Remittances / gifts | 3% |

80% of assessed HHs reported that they had debt.

For the HHs in debt, the average household debt amounted to:⁹

26,478
AFN

32% of assessed HHs reported that they were relying only on borrowing, begging, or Zakat:¹³

79% of assessed HHs reported relying on casual labour by one member of the household.

0% of assessed HHs reported that they were living without any source of livelihoods or income-generating activities.

Cash Access and Rental Methods

17% of assessed HHs reported not paying rent on time each month.

Top 5 reasons assessed HHs were unable to pay their rent on time:¹⁰

| | |
|---|------------|
| Breadwinners have not been paid on time | 93% |
| Owner/property agent was not present | 3% |
| Rent increased in price | 3% |
| I was not physically present to pay for it | 2% |
| I had the money but could not withdraw it from the bank | 1% |

% of assessed HHs reported that their rent had changed in the following ways in the previous year:

Assessed HHs reported changes in rent amount since the previous year.

743 AFN

Methods of rental payment reported by assessed HHs:¹⁰

| | |
|---------------------------|--------------------------------------|
| 99% Cash (direct) | 0% Credit/loan |
| 3% Bank account | 4% Hawala ¹⁵ |
| 0% Mobile transfer | 2% In-kind (crops, materials) |

90% of assessed HHs reported that they needed documents to rent house/apartment.

% of assessed HHs by the type of documents needed to sign a rental agreement:¹⁰

| | |
|------------------------------------|-------------------------------|
| 98% Tazkera ¹⁴ | 6% Employment contract |
| 93% Letter of guarantee | 0% Bank statement |
| 58% Witness / sign document | 0% Nothing |

91% of assessed HHs reported that they received a receipt/proof of payment for rent payment.

Assessed HHs by most reported preferred method to receive cash assistance (for any purpose):

| | |
|---------------------------|--------------------------------------|
| 99% Cash (direct) | 0% Credit/loan |
| 1% Bank account | 0% Hawala ¹⁵ |
| 0% Mobile transfer | 0% In-kind (crops, materials) |

13. Payment made annually under Islamic law on certain kinds of property and used for charitable and religious purposes.

14. Tazkera: Afghanistan national identification card.

15. A Hawala system refers to an informal channel for transferring funds from one location to another through service providers.

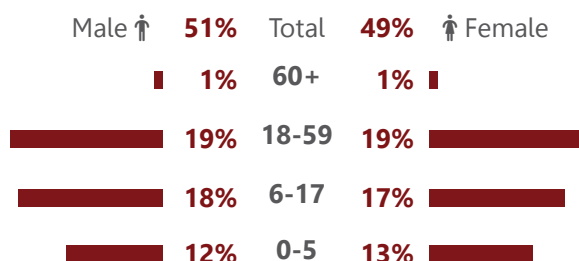

Households Rental Assessment Matun Municipality Khost Province, Afghanistan

February 2022

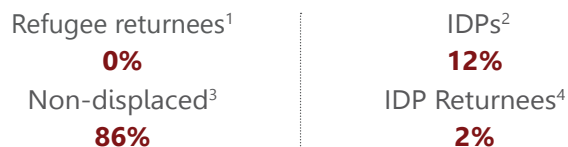

Demographics

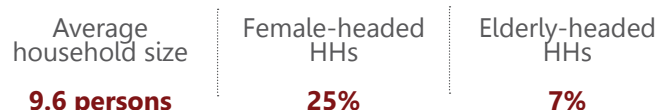

Reported HHs composition, disaggregated by age and gender:

HHs surveyed reported the following displacement statuses:

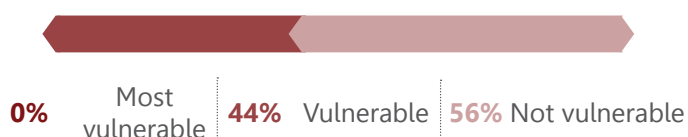

Key demographics of the interviewed HHs:

Household Vulnerability Factors

Reported household vulnerability category, based on key indicators determined by the ES/NFI Cluster criteria.⁵

0% of assessed HHs reported that their head of household (hohh) is either women or child without other adult males in the HH.

44% of assessed HHs reported a dependency ratio⁶ of 8 or more.

2% of assessed HHs that reported no adult male of working age or adult working female in the HH.

58% of assessed HHs reported that their hohh had a disability, was suffering from a chronic illness, or was an older person.

68%

of assessed HHs reported that, including hohh, one or more members had a disability or chronic illness.

Displacement

The top 3 most common provinces assessed IDP HHs reportedly lived before their first displacement were:

Average duration of displacement reported by assessed IDP HHs since their HH had first displaced: **5.6 year(s)**

Assessed IDP HHs by reported length of time, on average, they had been living in their current location: **2.6 year(s)**

27.6 year(s) Average reported length of time since assessed returnee HHs fled Afghanistan for the first time.

13.1 year(s) Assessed returnee HHs by reported length of time, on average, since they last returned to Afghanistan

Assessed IDP returnee HHs by reported length of time since they last fled this location: **7.7 year(s)**

Assessed IDP returnee HHs by reported length of time since they returned to this location: **3.5 year(s)**

1. Refugee returnees: HHs whose living in their area of origin and were forcibly displaced and fled to another country and have since returned home.

2. IDPs: HHs who had been displaced from their area of origin and who were forcibly displaced from their homes due to conflict or environmental shocks and fled to another location in Afghanistan.

3. Non-displaced: HHs who were living in their area of origin and had not been displaced or HHs who were not living in their area of origin but had moved to another part of Afghanistan for work or to be near family.

4. IDP Returnees: HHs who were living in their area of origin and who previously were forcibly displaced and fled to another location in Afghanistan and then returned home.

5. The ES/NFI cluster maintains a set of vulnerability criteria based on 11 indicators which have the following categories: a scoring system of 0-24: Not Sufficiently Vulnerable (0-8); Vulnerable (9-16); and the Most Vulnerable (17-24).

6. Dependency ratio equated to total number of household members / (sum of adult males (age 18 to 59) and female breadwinners - sum of disabled adult males and disabled female breadwinners).

House/Apartment General Information

Assessed HHs by reported accommodation type:

90%

House⁷

10%

Apartment⁸

Top 5 reported types of construction materials used for construction of the house/apartment, by % of HHs:

| | |
|----------------------------|-----|
| Permanent mud | 55% |
| Permanent firebricks | 21% |
| Permanent concrete | 13% |
| Permanent concrete blocks | 5% |
| Permanent sun-dried bricks | 4% |

Average duration of stay in current house/apartment reported by assessed HHs:

| | |
|--------------------------|-------------------------|
| 1% Less than 1 month | 28% 2 years to 5 years |
| 16% 1 month to 6 months | 10% 5 years to 10 years |
| 17% 6 months to 1 year | 9% 10 years or more |
| 20% 1 year up to 2 years | 11% Always lived here |

Average reported number of individuals living in house/apartment:

9.5

Average reported number of rooms available in house/apartment:

3

92% of assessed HHs reported there was a separate room for kitchen in their shelter.

80% of assessed HHs reported that they had separate rooms available in their shelter for male and female household members.

27% of assessed HHs reported that they owned livestock.

Assessed HHs living in houses on average paid the following monthly rent:⁹

3,419
AFN

Assessed HHs living in apartments on average paid the following monthly rent:⁹

4,388
AFN

100% of assessed HHs reported paying for their rent in Afghani currency.

House/apartment Service Costs

Of those HHs who reported that they were paying for the services, their average reported expenditure⁹ for each utility is:¹⁰

| | | | |
|----------------|-----------|---------------------|---------|
| Water supply | 396 AFN | Internet/television | 808 AFN |
| Electricity | 843 AFN | Parking | 0 AFN |
| Fuel/heating | 3,050 AFN | Communal services | 167 AFN |
| Waste disposal | 342 AFN | Other bills | 885 AFN |

Insurance/Deposit

100% of assessed HHs reported not having insurance for their house/apartment.

2%

of assessed HHs having to pay a deposit to rent their house/apartment.

Average amount of money households reported having to spent on a deposit for their house/apartment:⁹

8,143
AFN

9% of assessed HHs reported that they were living in an open, emergency, or makeshift shelter.¹¹

Accommodation Arrangements

Assessed HHs by reported type of rental agreement they had for their house/apartment:

| | |
|-----|--|
| 24% | Written agreement with the house/apartment owner |
| 1% | A written agreement with the property dealer |
| 1% | Letter with stamp from Community Leader |
| 75% | Verbal agreement |

HHs by average reported length of time that the rental agreement is valid:

| | | | |
|-----|---------------|-----|--------------------|
| 2% | 1 month | 33% | 6 months to 1 year |
| 9% | 1 to 3 months | 30% | More than 1 year |
| 18% | 3 to 6 months | 8% | Not to answer |

7. House: a structure for living with 1-2 floors and a yard.

8. Apartment: a structure with many different living units inside of the structure, with more than 2 floors and no yard.

9. All costs, income and debt were reported in Afghani (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury](#), UN

[Operational Rates of Exchange](#), 01 February 2022.

10. Respondent could select more than one response.

11. Shelter type was unfinished or shelter damage level was either fully destroyed, makeshift, with no solid or permanent materials, or bad (significant structural damage, including collapsed walls or partly collapsed floors or roof).

15% of assessed HHs reported residing with or hosting other HHs:

20% of assessed HHs reported being hosted by another HH.

Average number of rooms assessed HHs reported that they were residing: **2.9**

96% of assessed HHs reported that all of the rooms in the house/apartment were covered by their rent:

Average size of the house/apartment in square meters, as reported by households: **309**

3% of assessed household reported that they had to pay at least 1 month of rent in advance.
On average, **4** months of rent were reported to need to be paid in advance.

Assessed households reported that rent was paid to:

| | |
|-------------------------------|---------------------------------------|
| 89% The owner | 8% Representative of the owner |
| 2% The property dealer | 2% Relative of the owner |

% of assessed HHs by who they would go to in the event of a dispute with the landlord or property agent:

| | |
|------------------------------------|-----------------------------------|
| 70% Deal with it themselves | 0% Religious courts |
| 5% Police | 17% Community leadership |
| 1% Civil courts | 7% Religious leader/mullah |

Shelter Selection

% of assessed HHs by reported main reasons that they chose this house/apartment:

| | |
|--|--|
| 3% Only available house/apartment | 3% People I know live here |
| 58% Most affordable | 2% Family/relatives lives here |
| 20% Wanted to live here | 0% House/apartment rent was paid by someone |
| 14% Facilities (services) are near here | |

Top 4 most reported answers from assessed HHs of how they found their house/apartment:

| | |
|---------------------------------|------------|
| Friend or colleague | 53% |
| Family or relative | 40% |
| Through a property dealer/agent | 5% |
| Community leader/elder | 2% |

33% of assessed HHs reportedly faced challenges finding a house/apartment.

Assessed HHs faced the following challenges when finding a house/apartment:¹⁰

| | |
|---|------------|
| All available houses/apartments were too expensive | 80% |
| No houses/apartments were available to rent | 43% |
| Property agents did not want to rent to me or my family | 2% |
| Host community did not want us here | 7% |
| Did not know how to find a place to rent | 14% |
| Had never rented before | 9% |

Building/Rental Area Conditions

% of HHs reported condition of the house overall:

| | |
|--------------------------------|------------------------------------|
| 57% Good (no damage) | 8% Bad (significant damage) |
| 20% Minor (some damage) | 1% Fully destroyed |
| 15% Moderate (damage) | |

Building/Rental Area Materials

Most commonly reported building materials used in house/apartment roof construction by HHs:¹⁰

| | |
|-----------------------|----------------------------|
| 52% Wood/poles | 41% Steel I-beam |
| 35% Bricks | 1% CGI Iron sheet |
| 25% Concrete | 0% Asphalt (Isogam) |
| 1% Reeds | |

Top 4 most commonly reported building materials used in house/apartment wall construction:¹⁰

| | |
|--------------------------------|---------------------------------|
| 53% Bricks | 23% Mud Plaster (Kaghil) |
| 43% Packed Mud (Pakhsa) | 21% Concrete |

Top 4 most commonly reported building materials used in house/apartment floor construction:¹⁰

| | |
|---------------------------------|--------------------------------|
| 47% Mud Plaster (Kaghil) | 12% Packed Mud (Pakhsa) |
| 40% Concrete | 7% Bricks |

Service Access

85% of assessed HHs reported that they had access to water for drinking, cooking, and bathing.

Top 5 most reported answers from assessed HHs with enough water by main source of water for domestic use:

| | |
|--|---------------------|
| 36% Pipe Scheme | 13% Dug well |
| 36% Hand pump/bore well | 0% Pond/lake |
| 15% Purchasing water/ water tanker | |

59% of the assessed households reported that their primary water source was located inside the building they lived in.

% of assessed HHs that reporting access to hand-washing facilities:¹⁰

| | |
|---|---|
| 91% Yes, inside the house/ apartment | 4% Yes, but only outside of rental area/building |
| 4% Yes, in rental area/ building, but not inside house/apartment | 1% No, none available |

Energy and Heating

% of assessed HHs by reported main fuel source for heating:

| | |
|----------------------|------------|
| Wood, bushes | 70% |
| Coal | 0% |
| Liquid petroleum gas | 6% |
| Charcoal | 0% |
| Electricity | 2% |
| Dung | 8% |
| Waste | 14% |

% of assessed HHs by reported main fuel sources for cooking:

| | |
|----------------------|------------|
| Wood, bushes | 63% |
| Coal | 0% |
| Liquid petroleum gas | 19% |
| Charcoal | 0% |
| Electricity | 1% |
| Dung | 6% |
| Waste | 12% |

Assessed households by reported kind of sanitation facility (latrine/toilet) that they used:

| | |
|---------------------------------------|-----------------------------|
| 23% Flush or pour/flush toilet | 15% Open hole |
| 44% Pit latrine with a slab | 1% No latrine/toilet |
| 18% Pit latrine without a slab | |

12%

of the assessed HHs reported with sharing latrine/toilet.

69% of assessed HHs reported with poor asset holdings.

% of assessed HHs reported currently have the following non-food items in their HHs.

| | |
|--|------------|
| Sleeping mats or mattress | 96% |
| Kitchen sets (cooking pots and stainless steel cups) | 98% |
| Water storage containers (cans, buckets with lid, etc.) | 93% |
| Heating devices (gas cylinder / traditional bukhari stove) | 79% |
| Plastic tarpaulin | 45% |
| Winter clothing, including for all children | 66% |

62% of assessed HHs reported that they had access to electricity.

Of HHs reporting access to electricity, the main reported sources were:

| | |
|------------------------------|---------------------|
| 31% Power lines/ grid | 8% Generator |
| 5% Hydroelectric dam | 3% Battery |
| 52% Solar power | 0% None |

Waste Disposal

% of assessed HHs by reported main solid waste disposal methods:

| | |
|----------------------------|------------|
| Garbage collection service | 5% |
| Burned | 13% |
| Buried | 4% |
| Community containers | 2% |
| Throw in open field | 76% |

% of assessed HHs by reported main liquid waste disposal methods:

| | |
|-------------------------------|------------|
| Septic tank | 0% |
| Open drainage/street channels | 46% |
| Municipal sewage network | 6% |
| Simple cesspit/hole in ground | 13% |
| Dump on ground | 35% |

Other Service Access

93% assessed HHs reported that a health centre was accessible from their house/apartment:

Of those HHs who reported having access to a health center, the average time to the facility from their homes was:

| | |
|---------------------------------|-----------------------------|
| 27% Less than 15 minutes | 5% 1-2 hours |
| 46% 15-29 minutes | 2% More than 2 hours |
| 21% 30-59 minutes | |

99%

of assessed HHs reported having access to school. The following schools types were accessible:¹⁰

12. A separate religious school that is separate from a mosque.

Average amount of total monthly cash income reported by assessed households:⁹

8,425
AFN

Of households reporting that they received income, the top 5 main sources of cash were:¹⁰

81% of assessed HHs reported that they had debt.

For the HHs in debt, the average household debt amounted to:⁹

90,660
AFN

43% of assessed HHs reported that they were relying only on borrowing, begging, or Zakat:¹³

66% of assessed HHs reported relying on casual labour by one member of the household.

3% of assessed HHs reported that they were living without any source of livelihoods or income-generating activities.

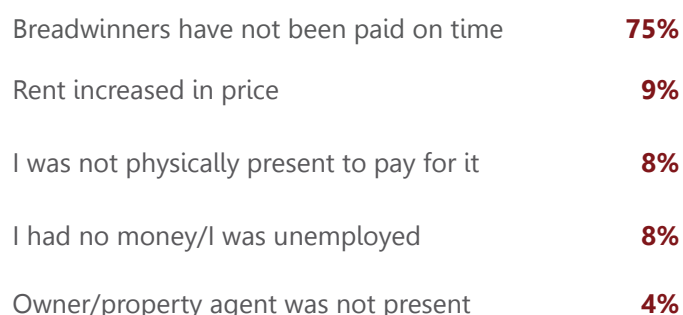

Cash Access and Rental Methods

28% of assessed HHs reported not paying rent on time each month.

Top 5 reasons assessed HHs were unable to pay their rent on time:¹⁰

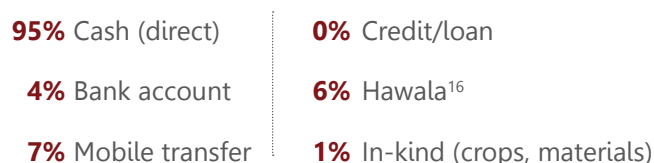

% of assessed HHs reported that their rent had changed in the following ways in the previous year:

Assessed HHs reported changes in rent amount since the previous year.

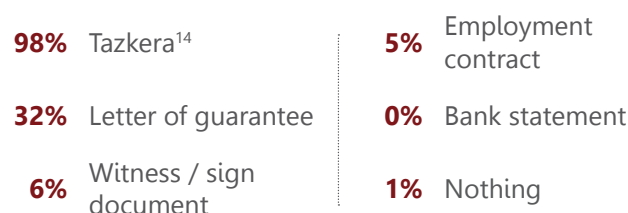

903 AFN

Methods of rental payment reported by assessed HHs:¹⁰

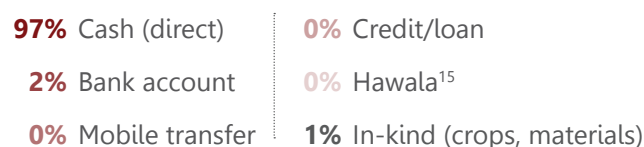

29% of assessed HHs reported that they needed documents to rent house/apartment.

% of assessed HHs by the type of documents needed to sign a rental agreement.¹⁰

34% of assessed HHs reported that they received a receipt/proof of payment for rent payment.

Assessed HHs by most reported preferred method to receive cash assistance (for any purpose):

13. Payment made annually under Islamic law on certain kinds of property and used for charitable and religious purposes.

14. Tazkera: Afghanistan national identification card.

15. A Hawala system refers to an informal channel for transferring funds from one location to another through service providers.

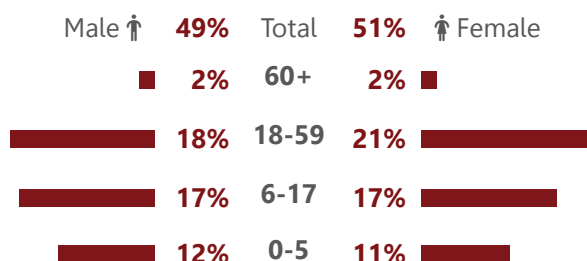

Households Rental Assessment Kunduz Municipality Kunduz Province, Afghanistan

February 2022

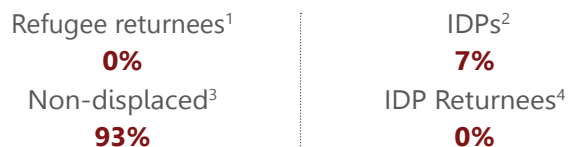

Demographics

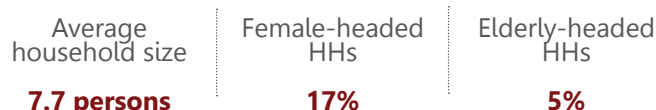

Reported HHs composition, disaggregated by age and gender:

HHs surveyed reported the following displacement statuses:

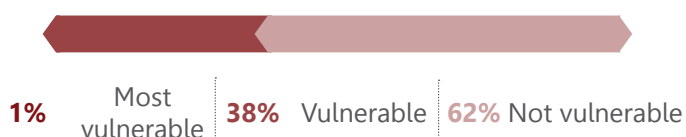

Key demographics of the interviewed HHs:

Household Vulnerability Factors

Reported household vulnerability category, based on key indicators determined by the ES/NFI Cluster criteria.⁵

1% of assessed HHs reported that their head of household (hohh) is either women or child without other adult males in the HH.

38% of assessed HHs reported a dependency ratio⁶ of 8 or more.

3% of assessed HHs that reported no adult male of working age or adult working female in the HH.

39% of assessed HHs reported that their hohh had a disability, was suffering from a chronic illness, or was an older person.

57%

of assessed HHs reported that, including hohh, one or more members had a disability or chronic illness.

Displacement

The top 3 most common provinces assessed IDP HHs reportedly lived before their first displacement were:

Average duration of displacement reported by assessed IDP HHs since their HH had first displaced: **2.1 year(s)**

Assessed IDP HHs by reported length of time, on average, they had been living in their current location: **0.9 year(s)**

0 year(s) Average reported length of time since assessed returnee HHs fled Afghanistan for the first time.

0 year(s) Assessed returnee HHs by reported length of time, on average, since they last returned to Afghanistan

Assessed IDP returnee HHs by reported length of time since they last fled this location: **0 year(s)**

Assessed IDP returnee HHs by reported length of time since they returned to this location: **0 year(s)**

1. Refugee returnees: HHs whose living in their area of origin and were forcibly displaced and fled to another country and have since returned home.

2. IDPs: HHs who had been displaced from their area of origin and who were forcibly displaced from their homes due to conflict or environmental shocks and fled to another location in Afghanistan.

3. Non-displaced: HHs who were living in their area of origin and had not been displaced or HHs who were not living in their area of origin but had moved to another part of Afghanistan for work or to be near family.

4. IDP Returnees: HHs who were living in their area of origin and who previously were forcibly displaced and fled to another location in Afghanistan and then returned home.

5. The ES/NFI cluster maintains a set of vulnerability criteria based on 11 indicators which have the following categories: a scoring system of 0-24: Not Sufficiently Vulnerable (0-8); Vulnerable (9-16); and the Most Vulnerable (17-24).

6. Dependency ratio equated to total number of household members / (sum of adult males (age 18 to 59) and female breadwinners - sum of disabled adult males and disabled female breadwinners).

House/Apartment General Information

Assessed HHs by reported accommodation type:

99% House⁷ **1%** Apartment⁸

22% of assessed HHs reported that they were living in an open, emergency, or makeshift shelter.¹¹

Accommodation Arrangements

Assessed HHs by reported type of rental agreement they had for their house/apartment:

| | |
|------------|--|
| 57% | Written agreement with the house/apartment owner |
| 2% | A written agreement with the property dealer |
| 10% | Letter with stamp from Community Leader |
| 32% | Verbal agreement |

HHs by average reported length of time that the rental agreement is valid:

| | | | |
|------------|---------------|------------|--------------------|
| 0% | 1 month | 26% | 6 months to 1 year |
| 1% | 1 to 3 months | 60% | More than 1 year |
| 12% | 3 to 6 months | 0% | Not to answer |

7. House: a structure for living with 1-2 floors and a yard.

8. Apartment: a structure with many different living units inside of the structure, with more than 2 floors and no yard.

9. All costs, income and debt were reported in Afghani (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury](#), UN

[Operational Rates of Exchange](#), 01 February 2022.

10. Respondent could select more than one response.

11. Shelter type was unfinished or shelter damage level was either fully destroyed, makeshift, with no solid or permanent materials, or bad (significant structural damage, including collapsed walls or partly collapsed floors or roof).

5% of assessed HHs reported residing with or hosting other HHs:

5% of assessed HHs reported being hosted by another HH.

Average number of rooms assessed HHs reported that they were residing: **2.2**

96% of assessed HHs reported that all of the rooms in the house/apartment were covered by their rent:

Average size of the house/apartment in square meters, as reported by households: **253**

12% of assessed household reported that they had to pay at least 1 month of rent in advance.
On average, **3** months of rent were reported to need to be paid in advance.

Assessed households reported that rent was paid to:

| | |
|-------------------------------|---------------------------------------|
| 91% The owner | 6% Representative of the owner |
| 1% The property dealer | 2% Relative of the owner |

% of assessed HHs by who they would go to in the event of a dispute with the landlord or property agent:

| | |
|------------------------------------|-----------------------------------|
| 81% Deal with it themselves | 0% Religious courts |
| 0% Police | 12% Community leadership |
| 0% Civil courts | 7% Religious leader/mullah |

Shelter Selection

% of assessed HHs by reported main reasons that they chose this house/apartment:

| | |
|---|--|
| 14% Only available house/apartment | 9% People I know live here |
| 43% Most affordable | 20% Family/relatives lives here |
| 12% Wanted to live here | 0% House/apartment rent was paid by someone |
| 2% Facilities (services) are near here | |

Top 4 most reported answers from assessed HHs of how they found their house/apartment:

| | |
|---------------------------------|------------|
| Family or relative | 63% |
| Friend or colleague | 24% |
| Community leader/elder | 9% |
| Through a property dealer/agent | 4% |

27% of assessed HHs reportedly faced challenges finding a house/apartment.

Assessed HHs faced the following challenges when finding a house/apartment:¹⁰

| | |
|---|------------|
| All available houses/apartments were too expensive | 93% |
| No houses/apartments were available to rent | 16% |
| Property agents did not want to rent to me or my family | 0% |
| Host community did not want us here | 1% |
| Did not know how to find a place to rent | 12% |
| Had never rented before | 1% |

Building/Rental Area Conditions

% of HHs reported condition of the house overall:

| | |
|--------------------------------|-------------------------------------|
| 20% Good (no damage) | 22% Bad (significant damage) |
| 25% Minor (some damage) | 0% Fully destroyed |
| 34% Moderate (damage) | |

Building/Rental Area Materials

Most commonly reported building materials used in house/apartment roof construction by HHs:¹⁰

| | |
|-----------------------|----------------------------|
| 94% Wood/poles | 8% Steel I-beam |
| 5% Bricks | 3% CGI Iron sheet |
| 8% Concrete | 2% Asphalt (Isogam) |
| 80% Reeds | |

Top 4 most commonly reported building materials used in house/apartment wall construction:¹⁰

| | |
|---------------------------------|---------------------------|
| 68% Mud Plaster (Kaghil) | 49% Bricks |
| 55% Packed Mud (Pakhsa) | 18% Gypsum/Plaster |

Top 4 most commonly reported building materials used in house/apartment floor construction:¹⁰

| | |
|---------------------------------|--------------------------------|
| 71% Mud Plaster (Kaghil) | 24% Packed Mud (Pakhsa) |
| 27% Concrete | 5% Gypsum/Plaster |

Service Access

89% of assessed HHs reported that they had access to water for drinking, cooking, and bathing.

Top 5 most reported answers from assessed HHs with enough water by main source of water for domestic use:

| | |
|--------------------------------|--|
| 43% Dug well | 0% Kandas |
| 31% Pipe Scheme | 0% Purchasing water/ water tanker |
| 26% Hand pump/bore well | |

81% of the assessed households reported that their primary water source was located inside the building they lived in.

% of assessed HHs that reporting access to hand-washing facilities:¹⁰

| | |
|---|---|
| 81% Yes, inside the house/ apartment | 4% Yes, but only outside of rental area/building |
| 7% Yes, in rental area/ building, but not inside house/apartment | 9% No, none available |

Assessed households by reported kind of sanitation facility (latrine/toilet) that they used:

| | |
|---------------------------------------|-----------------------------|
| 16% Flush or pour/flush toilet | 16% Open hole |
| 37% Pit latrine with a slab | 0% No latrine/toilet |
| 31% Pit latrine without a slab | |

6%

of the assessed HHs reported with sharing latrine/toilet.

92% of assessed HHs reported with poor asset holdings.

% of assessed HHs reported currently have the following non-food items in their HHs.

| | |
|--|------------|
| Sleeping mats or mattress | 89% |
| Kitchen sets (cooking pots and stainless steel cups) | 69% |
| Water storage containers (cans, buckets with lid, etc.) | 31% |
| Heating devices (gas cylinder / traditional bukhari stove) | 55% |
| Plastic tarpaulin | 14% |
| Winter clothing, including for all children | 47% |

Energy and Heating

% of assessed HHs by reported main fuel source for heating:

| | |
|----------------------|------------|
| Wood, bushes | 59% |
| Coal | 1% |
| Liquid petroleum gas | 0% |
| Charcoal | 19% |
| Electricity | 0% |
| Dung | 14% |
| Waste | 7% |

% of assessed HHs by reported main fuel sources for cooking:

| | |
|----------------------|------------|
| Wood, bushes | 66% |
| Coal | 0% |
| Liquid petroleum gas | 11% |
| Charcoal | 8% |
| Electricity | 0% |
| Dung | 12% |
| Waste | 4% |

100% of assessed HHs reported that they had access to electricity.

Of HHs reporting access to electricity, the main reported sources were:

| | |
|-------------------------------|---------------------|
| 100% Power lines/ grid | 0% Generator |
| 0% Hydroelectric dam | 0% Battery |
| 0% Solar power | 0% None |

Waste Disposal

% of assessed HHs by reported main solid waste disposal methods:

| | |
|----------------------------|------------|
| Garbage collection service | 17% |
| Burned | 4% |
| Buried | 23% |
| Community containers | 39% |
| Throw in open field | 17% |

% of assessed HHs by reported main liquid waste disposal methods:

| | |
|-------------------------------|------------|
| Septic tank | 2% |
| Open drainage/street channels | 20% |
| Municipal sewage network | 2% |
| Simple cesspit/hole in ground | 64% |
| Dump on ground | 12% |

Other Service Access

85% assessed HHs reported that a health centre was accessible from their house/apartment:

Of those HHs who reported having access to a health center, the average time to the facility from their homes was:

| | |
|---------------------------------|-----------------------------|
| 23% Less than 15 minutes | 1% 1-2 hours |
| 63% 15-29 minutes | 0% More than 2 hours |
| 12% 30-59 minutes | |

97%

of assessed HHs reported having access to school. The following schools types were accessible:¹⁰

| | |
|---------------------------------|------------|
| Primary school | 22% |
| High school | 83% |
| Secondary school | 34% |
| Religious madrasa ¹² | 73% |
| Community based education | 8% |
| Technical training centre | 0% |

% of assessed HHs reported HHs access to school, by school distance:

| | |
|---------------------------------|-----------------------------|
| 41% Less than 15 minutes | 0% 1-2 hours |
| 51% 15-29 minutes | 0% More than 2 hours |
| 8% 30-59 minutes | |

92% of assessed HHs reported having access to a market.

Assessed HHs with access to a market, by reported distance:

| | |
|---------------------------------|-----------------------------|
| 57% Less than 15 minutes | 1% 1-2 hours |
| 32% 15-29 minutes | 0% More than 2 hours |
| 10% 30-59 minutes | |

Livelihoods and Income

Average number of breadwinners reported per assessed households: **1.2**

Average number of female breadwinners reported per assessed households: **0.1**

7% Average of assessed households reported having at least one female breadwinner:

Top 5 sources of income, in last 30 days, reported by assessed households:¹⁰

| | |
|--------------------------------------|------------|
| Unskilled daily labour / no contract | 61% |
| Skilled daily labour / no contract | 32% |
| Formal employment / with contract | 3% |
| Business / sale of goods / services | 2% |
| None | 1% |

12. A separate religious school that is separate from a mosque.

Average amount of total monthly cash income reported by assessed households:⁹

6,837
AFN

Of households reporting that they received income, the top 5 main sources of cash were:¹⁰

| | |
|-----------------------------|------------|
| Income through work/labour | 94% |
| Borrow money / take on debt | 46% |
| Selling personal belongings | 18% |
| Remittances / gifts | 7% |
| Humanitarian Aid | 4% |

90% of assessed HHs reported that they had debt.

For the HHs in debt, the average household debt amounted to:⁹

37,707
AFN

51% of assessed HHs reported that they were relying only on borrowing, begging, or Zakat:¹³

81% of assessed HHs reported relying on casual labour by one member of the household.

0% of assessed HHs reported that they were living without any source of livelihoods or income-generating activities.

Cash Access and Rental Methods

30% of assessed HHs reported not paying rent on time each month.

Top 5 reasons assessed HHs were unable to pay their rent on time:¹⁰

| | |
|---|------------|
| Breadwinners have not been paid on time | 85% |
| I was not physically present to pay for it | 6% |
| I had no money/I was unemployed | 5% |
| I had the money but could not withdraw it from the bank | 5% |
| Rent increased in price | 1% |

% of assessed HHs reported that their rent had changed in the following ways in the previous year:

Assessed HHs reported changes in rent amount since the previous year.

990 AFN

Methods of rental payment reported by assessed HHs:¹⁰

| | |
|---------------------------|--------------------------------------|
| 99% Cash (direct) | 0% Credit/loan |
| 1% Bank account | 0% Hawala ¹⁶ |
| 0% Mobile transfer | 0% In-kind (crops, materials) |

56% of assessed HHs reported that they needed documents to rent house/apartment.

% of assessed HHs by the type of documents needed to sign a rental agreement.¹⁰

| | |
|------------------------------------|-------------------------------|
| 89% Tazkera ¹⁴ | 0% Employment contract |
| 38% Letter of guarantee | 0% Bank statement |
| 81% Witness / sign document | 1% Nothing |

46% of assessed HHs reported that they received a receipt/proof of payment for rent payment.

Assessed HHs by most reported preferred method to receive cash assistance (for any purpose):

| | |
|---------------------------|--------------------------------------|
| 99% Cash (direct) | 0% Credit/loan |
| 1% Bank account | 0% Hawala ¹⁵ |
| 0% Mobile transfer | 0% In-kind (crops, materials) |

13. Payment made annually under Islamic law on certain kinds of property and used for charitable and religious purposes.

14. Tazkera: Afghanistan national identification card.

15. A Hawala system refers to an informal channel for transferring funds from one location to another through service providers.

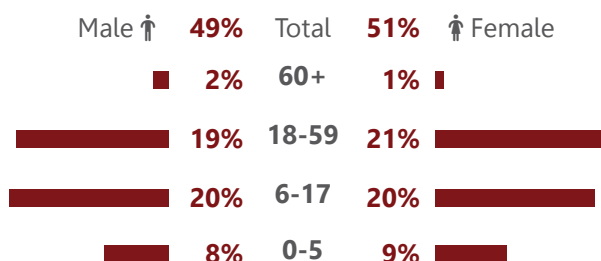

Households Rental Assessment Jalalabad Municipality Nangarhar Province, Afghanistan

February 2022

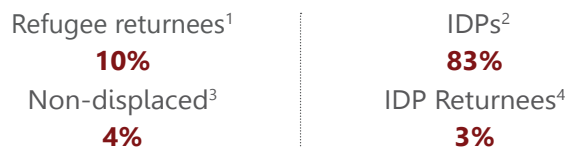

Demographics

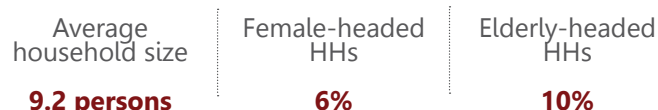

Reported HHs composition, disaggregated by age and gender:

HHs surveyed reported the following displacement statuses:

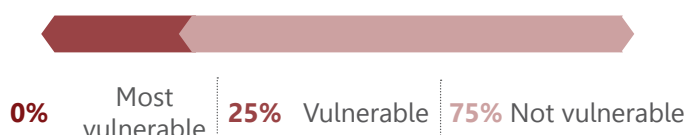

Key demographics of the interviewed HHs:

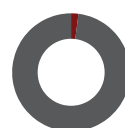

Household Vulnerability Factors

Reported household vulnerability category, based on key indicators determined by the ES/NFI Cluster criteria.⁵

0% of assessed HHs reported that their head of household (hohh) is either women or child without other adult males in the HH.

37% of assessed HHs reported a dependency ratio⁶ of 8 or more.

2% of assessed HHs that reported no adult male of working age or adult working female in the HH.

33% of assessed HHs reported that their hohh had a disability, was suffering from a chronic illness, or was an older person.

57%

of assessed HHs reported that, including hohh, one or more members had a disability or chronic illness.

Displacement

The top 3 most common provinces assessed IDP HHs reportedly lived before their first displacement were:

Average duration of displacement reported by assessed IDP HHs since their HH had first displaced: **7 year(s)**

Assessed IDP HHs by reported length of time, on average, they had been living in their current location: **6.4 year(s)**

25.6 year(s) Average reported length of time since assessed returnee HHs fled Afghanistan for the first time.

10.7 year(s) Assessed returnee HHs by reported length of time, on average, since they last returned to Afghanistan

Assessed IDP returnee HHs by reported length of time since they last fled this location: **5.7 year(s)**

Assessed IDP returnee HHs by reported length of time since they returned to this location: **3.4 year(s)**

1. Refugee returnees: HHs whose living in their area of origin and were forcibly displaced and fled to another country and have since returned home.

2. IDPs: HHs who had been displaced from their area of origin and who were forcibly displaced from their homes due to conflict or environmental shocks and fled to another location in Afghanistan.

3. Non-displaced: HHs who were living in their area of origin and had not been displaced or HHs who were not living in their area of origin but had moved to another part of Afghanistan for work or to be near family.

4. IDP Returnees: HHs who were living in their area of origin and who previously were forcibly displaced and fled to another location in Afghanistan and then returned home.

5. The ES/NFI cluster maintains a set of vulnerability criteria based on 11 indicators which have the following categories: a scoring system of 0-24: Not Sufficiently Vulnerable (0-8); Vulnerable (9-16); and the Most Vulnerable (17-24).

6. Dependency ratio equated to total number of household members / (sum of adult males (age 18 to 59) and female breadwinners - sum of disabled adult males and disabled female breadwinners).

House/Apartment General Information

Assessed HHs by reported accommodation type:

98% House⁷ **2%** Apartment⁸

Top 5 reported types of construction materials used for construction of the house/apartment, by % of HHs:

| | |
|----------------------------|------------|
| Permanent mud | 39% |
| Permanent firebricks | 34% |
| Permanent sun-dried bricks | 13% |
| Permanent concrete | 11% |
| Permanent concrete blocks | 1% |

Average duration of stay in current house/apartment reported by assessed HHs:

| | |
|---------------------------------|--------------------------------|
| 1% Less than 1 month | 35% 2 years to 5 years |
| 11% 1 month to 6 months | 12% 5 years to 10 years |
| 15% 6 months to 1 year | 2% 10 years or more |
| 24% 1 year up to 2 years | 10% Always lived here |

Average reported number of individuals living in house/apartment: **9.3**

Average reported number of rooms available in house/apartment: **2.9**

37% of assessed HHs reported there was a separate room for kitchen in their shelter.

49% of assessed HHs reported that they had separate rooms available in their shelter for male and female household members.

15% of assessed HHs reported that they owned livestock.

Assessed HHs living in houses on average paid the following monthly rent:⁹ **3,430** AFN

Assessed HHs living in apartments on average paid the following monthly rent:⁹ **4,607** AFN

100% of assessed HHs reported paying for their rent in Afghani currency.

House/apartment Service Costs

Of those HHs who reported that they were paying for the services, their average reported expenditure⁹ for each utility is:¹⁰

| | | | |
|----------------|----------------|---------------------|----------------|
| Water supply | 465 AFN | Internet/television | 0 AFN |
| Electricity | 894 AFN | Parking | 200 AFN |
| Fuel/heating | 652 AFN | Communal services | 221 AFN |
| Waste disposal | 267 AFN | Other bills | 0 AFN |

Insurance/Deposit

98% of assessed HHs reported not having insurance for their house/apartment.

3% of assessed HHs having to pay a deposit to rent their house/apartment.

Average amount of money households reported having to spent on a deposit for their house/apartment:⁹ **5,633** AFN

12% of assessed HHs reported that they were living in an open, emergency, or makeshift shelter.¹¹

Accommodation Arrangements

Assessed HHs by reported type of rental agreement they had for their house/apartment:

| | |
|------------|--|
| 25% | Written agreement with the house/apartment owner |
| 12% | A written agreement with the property dealer |
| 9% | Letter with stamp from Community Leader |
| 51% | Verbal agreement |

HHs by average reported length of time that the rental agreement is valid:

| | | | |
|------------|---------------|------------|--------------------|
| 0% | 1 month | 44% | 6 months to 1 year |
| 3% | 1 to 3 months | 36% | More than 1 year |
| 13% | 3 to 6 months | 4% | Not to answer |

7. House: a structure for living with 1-2 floors and a yard.

8. Apartment: a structure with many different living units inside of the structure, with more than 2 floors and no yard.

9. All costs, income and debt were reported in Afghani (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury, UN](#)

[Operational Rates of Exchange](#), 01 February 2022.

10. Respondent could select more than one response.

11. Shelter type was unfinished or shelter damage level was either fully destroyed, makeshift, with no solid or permanent materials, or bad (significant structural damage, including collapsed walls or partly collapsed floors or roof).

2% of assessed HHs reported residing with or hosting other HHs:

2% of assessed HHs reported being hosted by another HH.

Average number of rooms assessed HHs reported that they were residing: **2.7**

94% of assessed HHs reported that all of the rooms in the house/apartment were covered by their rent:

Average size of the house/apartment in square meters, as reported by households: **309**

11% of assessed household reported that they had to pay at least 1 month of rent in advance.
On average, **3** months of rent were reported to need to be paid in advance.

Assessed households reported that rent was paid to:

| | |
|-------------------------------|--|
| 59% The owner | 17% Representative of the owner |
| 6% The property dealer | 19% Relative of the owner |

% of assessed HHs by who they would go to in the event of a dispute with the landlord or property agent:

| | |
|------------------------------------|------------------------------------|
| 43% Deal with it themselves | 0% Religious courts |
| 2% Police | 42% Community leadership |
| 0% Civil courts | 13% Religious leader/mullah |

Shelter Selection

% of assessed HHs by reported main reasons that they chose this house/apartment:

| | |
|--|--|
| 5% Only available house/apartment | 6% People I know live here |
| 52% Most affordable | 14% Family/relatives lives here |

12. A separate religious school that is separate from a mosque.

Average amount of total monthly cash income reported by assessed households:⁹

7,068
AFN

Of households reporting that they received income, the top 5 main sources of cash were:¹⁰

| | |
|-----------------------------|------------|
| Income through work/labour | 91% |
| Borrow money / take on debt | 26% |
| Selling personal belongings | 13% |
| Humanitarian Aid | 5% |
| Remittances / gifts | 3% |

86% of assessed HHs reported that they had debt.

For the HHs in debt, the average household debt amounted to:⁹

45,476
AFN

29% of assessed HHs reported that they were relying only on borrowing, begging, or Zakat:¹³

67% of assessed HHs reported relying on casual labour by one member of the household.

1% of assessed HHs reported that they were living without any source of livelihoods or income-generating activities.

Cash Access and Rental Methods

65% of assessed HHs reported not paying rent on time each month.

Top 5 reasons assessed HHs were unable to pay their rent on time:¹⁰

| | |
|---|------------|
| Breadwinners have not been paid on time | 68% |
| I had no money/I was unemployed | 22% |
| I had the money but could not withdraw it from the bank | 11% |
| I was not physically present to pay for it | 2% |
| The money was stolen | 2% |

% of assessed HHs reported that their rent had changed in the following ways in the previous year:

Assessed HHs reported changes in rent amount since the previous year.

775 AFN

Methods of rental payment reported by assessed HHs:¹⁰

| | |
|---------------------------|--------------------------------------|
| 94% Cash (direct) | 0% Credit/loan |
| 2% Bank account | 6% Hawala ¹⁶ |
| 0% Mobile transfer | 0% In-kind (crops, materials) |

47%

of assessed HHs reported that they needed documents to rent house/apartment.

% of assessed HHs by the type of documents needed to sign a rental agreement.¹⁰

| | |
|------------------------------------|-------------------------------|
| 93% Tazkera ¹⁴ | 0% Employment contract |
| 21% Letter of guarantee | 0% Bank statement |
| 52% Witness / sign document | 0% Nothing |

42%

of assessed HHs reported that they received a receipt/proof of payment for rent payment.

Assessed HHs by most reported preferred method to receive cash assistance (for any purpose):

| | |
|---------------------------|--------------------------------------|
| 87% Cash (direct) | 0% Credit/loan |
| 5% Bank account | 2% Hawala ¹⁵ |
| 1% Mobile transfer | 5% In-kind (crops, materials) |

13. Payment made annually under Islamic law on certain kinds of property and used for charitable and religious purposes.

14. Tazkera: Afghanistan national identification card.

15. A Hawala system refers to an informal channel for transferring funds from one location to another through service providers.

5. Respondent could select more than one response.

6. A separate religious school that is separate from a mosque.

Housing Demand

Assessed KIs reported that on average **54%** of the available houses/apartments were rented out during last the month in their Gozar.

Assessed KIs reported on average how many apartments or houses had been rented out over the last month in their Gozar: **28.9**

Assessed KIs reported on average how many apartments/houses had not been rented out and were empty during the last month in their Gozar: **18.1**

% of assessed KIs that reported vacancies, by reported reasons of houses/apartments being vacant in their Gozar:⁵

| | |
|--|------------|
| Renters cannot afford the rent for a house/apartment | 86% |
| Bad overall condition of the house or apartment | 15% |
| Not safe area to live in | 1% |
| Overall low demand for renting | 50% |
| Renters have returned home or left the country | 59% |

Housing Affordability

Assessed KIs by reported average monthly rental cost⁷ for the following types of houses in their Gozar:

| | |
|----------------------------|------------------|
| One room house | 1,544 AFN |
| Two room house | 2,746 AFN |
| Three room house | 3,998 AFN |
| More than three room house | 5,716 AFN |

% of assessed KIs by reported change in the cost of houses/apartments over the last year in their Gozar:

Assessed KIs by reported average change in the amount of rent⁷ in their Gozar: **1,665** AFN

98% of assessed KIs reported that they have not any insurance for any houses/apartments in their Gozar.

Assessed KIs by reported average monthly rental cost⁷ for the following types of apartments in their Gozar:

| | |
|--------------------------------|------------------|
| One room apartment | 2,706 AFN |
| Two room apartment | 4,452 AFN |
| Three room apartment | 6,355 AFN |
| More than three room apartment | 8,638 AFN |

% of assessed KIs by reported types of utilities that usually needed to be covered by renters in their Gozar:⁵

| | |
|---|------------|
| Water supply | 95% |
| Electricity | 87% |
| Heating in winter | 63% |
| Sewerage, centralized water disposal system | 52% |
| Internet | 13% |
| Parking | 10% |
| Cleaning/maintenance/communal services | 54% |

Rental Contract

% of assessed KIs by reported type of contract or agreement landlords or property agents used for the HHs that rent the houses/apartments in their Gozar:⁵

| | |
|--|------------|
| Written agreement with the house/apartment owner | 60% |
| A written agreement with the property dealer | 78% |
| Letter with stamp with community leader | 35% |
| Verbal agreement (no written documentation) | 23% |

% of assessed KIs by period the contract/agreement to rent a house/apartment in their Gozar typically last (in months):⁵

| | |
|----------------------------|---------------------------------|
| 4% One month | 83% > 6 months to 1 year |
| 18% > 1 to 3 months | 22% More than 1 year |
| 44% > 3 to 6 months | |

% of assessed KIs by reported methods through which renters/tenants pay their rent in their Gozar:⁵

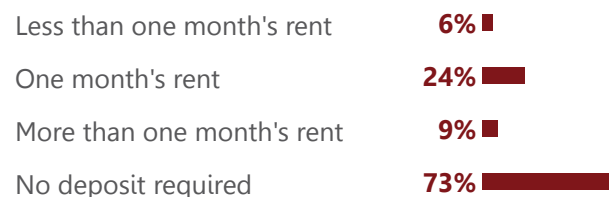

| | |
|---------------------------|-------------------------------|
| 99% Cash (direct) | 1% Credit/loan |
| 4% Bank account | 23% Hawala |
| 0% Mobile transfer | 4% In-kind (materials) |

7. All costs were reported in Afghanistan (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury](#), [UN Operational Rates of](#)

[Exchange](#), 01 February 2022.

% of assessed KIs reporting a deposit was usually required to rent properties in their Gozar:⁵

82%

of assessed KIs reported that landlords/property agents provided proof of payment when the rent was paid by renters/tenants in their Gozar.

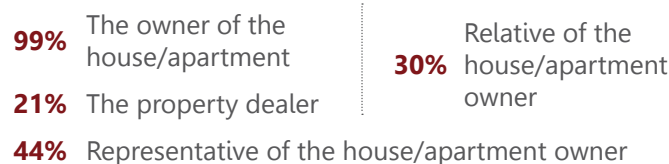

62% of assessed KIs reported tenants had to pay at least one month of rent in advance to rent a house/apartment in their Gozar.

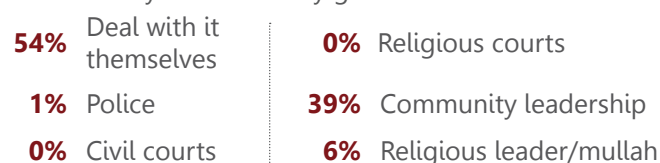

Assessed KIs reported the average number of months tenants usually had to pay in advance for their house/apartment was:

2.3
Months

% of assessed KIs reported that rent in their gozar was typically collected by:⁵

% of assessed KIs reported that if they ever had a dispute with a renter over rental arrangements, the person in their Gozar that they would usually go to was:

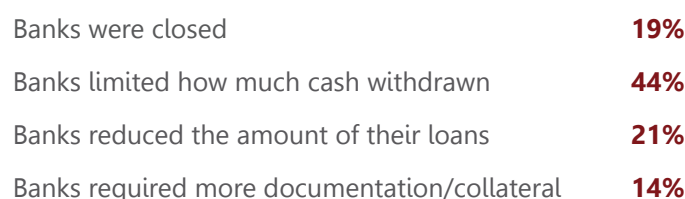

Credit access

% of assessed KIs by reported change in access to credit (loans) for business purposes in the previous year in their Gozar:

Of assessed KIs that reported their access to credit in their Gozar had decreased, the main reasons were:

Challenges

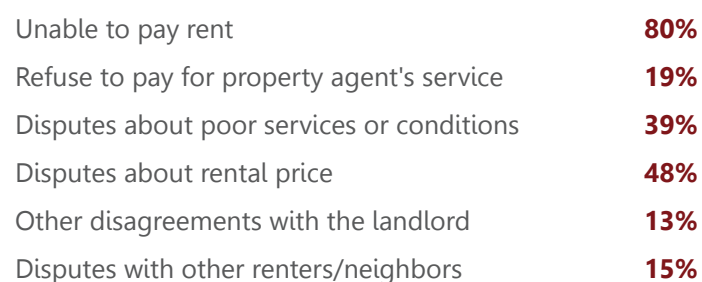

% of assessed KIs by reported number of months tenants usually rented their house/apartments for in their Gozar:

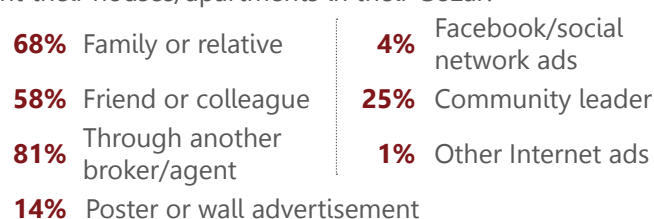

38%

of assessed KIs reported that they had disputes with households renting houses/apartments in their Gozar.

Of assessed KIs that reported having had disputes, the main reported reasons in the Gozar were:⁵

% of assessed KIs by reported by reported methods of how landlords/property agents usually find tenants to rent their houses/apartments in their Gozar:⁵

39% of assessed KIs reported that tenants always paid rent on time in their Gozar.

31% of assessed KIs reported that in the last three month at least one household that rented in their Gozar had experienced an eviction:

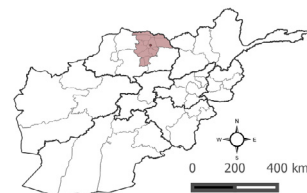

Of assessed KIs that reported an eviction had occurred in their Gozar, the main reported reasons were:⁵

| Rental properties | 66% | Formal employment/ with contract | 31% |
| Business/sale of goods/services | 31% | None | 0% |

5. Respondent could select more than one response.

6. A separate religious school that is separate from a mosque.

Housing Demand

Assessed KIs reported that on average **17%** of the available houses/apartments were rented out during last the month in their Gozar.

Assessed KIs reported on average how many apartments or houses had been rented out over the last month in their Gozar: **9.8**

Assessed KIs reported on average how many apartments/houses had not been rented out and were empty during the last month in their Gozar: **49**

% of assessed KIs that reported vacancies, by reported reasons of houses/apartments being vacant in their Gozar:⁵

Renters cannot afford the rent for a house/apartment **100%**

Bad overall condition of the house or apartment **0%**

Not safe area to live in **0%**

Overall low demand for renting **25%**

Renters have returned home or left the country **100%**

Housing Affordability

Assessed KIs by reported average monthly rental cost⁷ for the following types of houses in their Gozar:

| | |
|----------------------------|------------------|
| One room house | 1,391 AFN |
| Two room house | 2,719 AFN |
| Three room house | 4,119 AFN |
| More than three room house | 5,438 AFN |

% of assessed KIs by reported change in the cost of houses/apartments over the last year in their Gozar:

100% Decreased | **0%** Stayed the Same | **0%** Increased

Assessed KIs by reported average change in the amount of rent⁷ in their Gozar: **1,194** AFN

100% of assessed KIs reported that they have not any insurance for any houses/apartments in their Gozar.

Assessed KIs by reported average monthly rental cost⁷ for the following types of apartments in their Gozar:

| | |
|--------------------------------|------------------|
| One room apartment | 1,438 AFN |
| Two room apartment | 2,744 AFN |
| Three room apartment | 4,250 AFN |
| More than three room apartment | 5,578 AFN |

% of assessed KIs by reported types of utilities that usually needed to be covered by renters in their Gozar:⁵

Water supply **88%**

Electricity **38%**

Heating in winter **16%**

Sewerage, centralized water disposal system **0%**

Internet **0%**

Parking **0%**

Cleaning/maintenance/communal services **97%**

Rental Contract

% of assessed KIs by reported type of contract or agreement landlords or property agents used for the HHs that rent the houses/apartments in their Gozar:⁵

Written agreement with the house/apartment owner **97%**

A written agreement with the property dealer **91%**

Letter with stamp with community leader **100%**

Verbal agreement (no written documentation) **0%**

% of assessed KIs by period the contract/agreement to rent a house/apartment in their Gozar typically last (in months):⁵

0% One month | **97%** > 6 months to 1 year

0% > 1 to 3 months | **0%** More than 1 year

9% > 3 to 6 months

% of assessed KIs by reported methods through which renters/tenants pay their rent in their Gozar:⁵

100% Cash (direct) | **0%** Credit/loan

0% Bank account | **0%** Hawala

0% Mobile transfer | **0%** In-kind (materials)

7. All costs were reported in Afghanistan (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury](#), [UN Operational Rates of](#)

[Exchange](#), 01 February 2022.

% of assessed KIs reporting a deposit was usually required to rent properties in their Gozar:⁵

| | |
|----------------------------|-----|
| Less than one month's rent | 0% |
| One month's rent | 3% |
| More than one month's rent | 0% |
| No deposit required | 97% |

100%

of assessed KIs reported that landlords/property agents provided proof of payment when the rent was paid by renters/tenants in their Gozar.

3% of assessed KIs reported tenants had to pay at least one month of rent in advance to rent a house/apartment in their Gozar.

Credit access

% of assessed KIs by reported change in access to credit (loans) for business purposes in the previous year in their Gozar:

100% Decreased | 0% Stayed the Same | 0% Increased

Challenges

% of assessed KIs by reported number of months tenants usually rented their house/apartments for in their Gozar:

| | |
|---------------------------------|-----|
| One month | 0% |
| More than one month to 3 months | 0% |
| More than 3 months to 6 months | 6% |
| More than 6 months to 1 year | 94% |
| More than 1 year | 0% |

0%

of assessed KIs reported that they had disputes with households renting houses/apartments in their Gozar.

Of assessed KIs that reported having had disputes, the main reported reasons in the Gozar were:⁵

| | |
|--|----|
| Unable to pay rent | 0% |
| Refuse to pay for property agent's service | 0% |
| Disputes about poor services or conditions | 0% |
| Disputes about rental price | 0% |
| Other disagreements with the landlord | 0% |
| Disputes with other renters/neighbours | 0% |

Assessed KIs reported the average number of months tenants usually had to pay in advance for their house/apartment was:

0 Months

% of assessed KIs reported that rent in their gozar was typically collected by:⁵

| | | | |
|------|---|----|---------------------------------------|
| 100% | The owner of the house/apartment | 0% | Relative of the house/apartment owner |
| 0% | The property dealer | | |
| 16% | Representative of the house/apartment owner | | |

% of assessed KIs reported that if they ever had a dispute with a renter over rental arrangements, the person in their Gozar that they would usually go to was:

| | | | |
|-----|-------------------------|-----|-------------------------|
| 47% | Deal with it themselves | 0% | Religious courts |
| 0% | Police | 47% | Community leadership |
| 0% | Civil courts | 6% | Religious leader/mullah |

Of assessed KIs that reported their access to credit in their Gozar had decreased, the main reasons were:

| | |
|--|-----|
| Banks were closed | 0% |
| Banks limited how much cash withdrawn | 97% |
| Banks reduced the amount of their loans | 3% |
| Banks required more documentation/collateral | 0% |

% of assessed KIs by reported by reported methods of how landlords/property agents usually find tenants to rent their houses/apartments in their Gozar:⁵

| | | | |
|------|------------------------------|----|-----------------------------|
| 53% | Family or relative | 6% | Facebook/social network ads |
| 69% | Friend or colleague | 9% | Community leader |
| 84% | Through another broker/agent | 0% | Other Internet ads |
| 100% | Poster or wall advertisement | | |

0% of assessed KIs reported that tenants always paid rent on time in their Gozar.

0% of assessed KIs reported that in the last three month at least one household that rented in their Gozar had experienced an eviction:

Of assessed KIs that reported an eviction had occurred in their Gozar, the main reported reasons were:⁵

| | | | |
|----|--|----|---------------------------------------|
| 0% | Unable to pay rent | 0% | Disputes about rent price |
| 0% | Refuse to pay for property agent's service | 0% | Other disagreements with the landlord |
| 0% | Dispute about poor services/conditions | 0% | Dispute with other renters/neighbours |

| | |
|-----|----------------------------|
| 10% | Garbage collection service |
| 0% | Burned |
| 0% | Buried |
| 63% | Community Containers |
| 27% | Throw in open field |

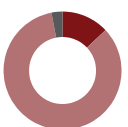

28% of assessed KIs reported that there was an active health centre accessible from all people, and 37% of those KIs reported that it was accessible to some people from the houses/apartments in their Gozar.

Assessed KIs reporting on average time length by walking from rental areas/buildings in their Gozar to the nearest health center.

| | | | |
|-----|----------------------|----|-------------------|
| 0% | Less than 15 minutes | 0% | 1-2 hours |
| 73% | 15-29 minutes | 0% | More than 2 hours |
| 27% | 30-59 minutes | 0% | Don't know |

82% of assessed KIs reported that there were functional public schools accessible for all HHs, and 10% of those KIs reported those schools were accessible to some HHs in the houses/apartments in their Gozar.

13% of assessed KIs reported that there were functional private schools accessible for all HHs, and 84% of those KIs reported those private schools were accessible for some HHs in the houses/apartments in their Gozar.

% of assessed KIs by reported types of schools that are currently accessible for households in their Gozar:⁵

| | |
|---------------------------------|------|
| Primary school | 100% |
| High school | 88% |
| Secondary school | 99% |
| Religious madrassa ⁶ | 94% |
| Community based education | 3% |
| Technical training centre | 0% |

% of assessed KIs reporting girls were able to attend primary schools in their Gozar:

| | | | |
|-----|---------------------------|----|------------------------|
| 88% | Yes, in all schools | 2% | No, not in any schools |
| 10% | Yes, private schools only | | |

% of assessed KIs reporting girls were able to attend secondary or high schools in their Gozar:

| | | | |
|-----|---------------------------|----|------------------------|
| 22% | Yes, in all schools | 3% | No, not in any schools |
| 75% | Yes, private schools only | | |

Assessed KIs reporting on average time length by walking from rental areas/building in their Gozar to the nearest functioning school:

| | | | |
|-----|----------------------|----|-------------------|
| 12% | Less than 15 minutes | 0% | 1-2 hours |
| 76% | 15-29 minutes | 0% | More than 2 hours |
| 12% | 30-59 minutes | 0% | Don't know |

94% of assessed KIs reported there were functioning markets accessible to all HHs, and 2% of those KIs reported markets accessible to some HHs from most houses/ apartment in their Gozar:

Assessed KIs reporting on average time length by walking from rental areas/buildings in their Gozar to the nearest functioning market:

| | | | |
|-----|----------------------|----|-------------------|
| 45% | Less than 15 minutes | 0% | 1-2 hours |
| 55% | 15-29 minutes | 0% | More than 2 hours |
| 0% | 30-59 minutes | 0% | Don't know |

% of assessed KIs by income sources that were reported to be available in the community for the majority of households in their Gozar:⁵

| | | | |
|---------------------------------|-----|------------------------------------|-----|
| Cash crop farming | 10% | Unskilled daily labour/no contract | 94% |
| Livestock farming | 10% | Skilled daily labour/ no contract | 82% |
| Rental properties | 47% | Formal employment/ with contract | 10% |
| Business/sale of goods/services | 46% | None | 0% |

5. Respondent could select more than one response.

6. A separate religious school that is separate from a mosque.

Housing Demand

Assessed KIs reported that on average **55%** of the available houses/apartments were rented out during last the month in their Gozar.

Assessed KIs reported on average how many apartments or houses had been rented out over the last month in their Gozar:

14.5

Assessed KIs reported on average how many apartments/houses had not been rented out and were empty during the last month in their Gozar:

13.4

% of assessed KIs that reported vacancies, by reported reasons of houses/apartments being vacant in their Gozar:⁵

| | |
|--|------------|
| Renters cannot afford the rent for a house/apartment | 88% |
| Bad overall condition of the house or apartment | 2% |
| Not safe area to live in | 0% |
| Overall low demand for renting | 96% |
| Renters have returned home or left the country | 28% |

Housing Affordability

Assessed KIs by reported average monthly rental cost⁷ for the following types of houses in their Gozar:

| | |
|----------------------------|------------------|
| One room house | 1,637 AFN |
| Two room house | 2,839 AFN |
| Three room house | 4,334 AFN |
| More than three room house | 6,612 AFN |

% of assessed KIs by reported change in the cost of houses/apartments over the last year in their Gozar:

7% Decreased | **12%** Stayed the Same | **81%** Increased

Assessed KIs by reported average change in the amount of rent⁷ in their Gozar:

1,692 AFN

100% of assessed KIs reported that they have not any insurance for any houses/apartments in their Gozar.

Assessed KIs by reported average monthly rental cost⁷ for the following types of apartments in their Gozar:

| | |
|--------------------------------|------------------|
| One room apartment | 2,618 AFN |
| Two room apartment | 4,724 AFN |
| Three room apartment | 7,141 AFN |
| More than three room apartment | 9,441 AFN |

% of assessed KIs by reported types of utilities that usually needed to be covered by renters in their Gozar:⁵

| | |
|---|-------------|
| Water supply | 99% |
| Electricity | 100% |
| Heating in winter | 91% |
| Sewerage, centralized water disposal system | 4% |
| Internet | 6% |
| Parking | 6% |
| Cleaning/maintenance/communal services | 12% |

Rental Contract

% of assessed KIs by reported type of contract or agreement landlords or property agents used for the HHs that rent the houses/apartments in their Gozar:⁵

| | |
|--|-------------|
| Written agreement with the house/apartment owner | 68% |
| A written agreement with the property dealer | 100% |
| Letter with stamp with community leader | 0% |
| Verbal agreement (no written documentation) | 0% |

% of assessed KIs by period the contract/agreement to rent a house/apartment in their Gozar typically last (in months):⁵

| | |
|----------------------------|---------------------------------|
| 13% One month | 46% > 6 months to 1 year |
| 43% > 1 to 3 months | 0% More than 1 year |
| 82% > 3 to 6 months | |

% of assessed KIs by reported methods through which renters/tenants pay their rent in their Gozar:⁵

| | |
|---------------------------|-------------------------------|
| 100% Cash (direct) | 0% Credit/loan |
| 0% Bank account | 9% Hawala |
| 0% Mobile transfer | 0% In-kind (materials) |

7. All costs were reported in Afghanistan (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury](#), [UN Operational Rates of](#)

[Exchange](#), 01 February 2022.

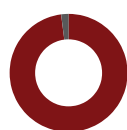

% of assessed KIs reporting a deposit was usually required to rent properties in their Gozar:⁵

| | |
|----------------------------|-----|
| Less than one month's rent | 0% |
| One month's rent | 62% |
| More than one month's rent | 7% |
| No deposit required | 44% |

99%

of assessed KIs reported that landlords/property agents provided proof of payment when the rent was paid by renters/tenants in their Gozar.

99% of assessed KIs reported tenants had to pay at least one month of rent in advance to rent a house/apartment in their Gozar.

Assessed KIs reported the average number of months tenants usually had to pay in advance for their house/apartment was:

2.4
Months

% of assessed KIs reported that rent in their gozar was typically collected by:⁵

| | | | |
|------|---|-----|---------------------------------------|
| 100% | The owner of the house/apartment | 46% | Relative of the house/apartment owner |
| 49% | The property dealer | | |
| 43% | Representative of the house/apartment owner | | |

% of assessed KIs reported that if they ever had a dispute with a renter over rental arrangements, the person in their Gozar that they would usually go to was:

| | | | |
|-----|-------------------------|----|-------------------------|
| 96% | Deal with it themselves | 0% | Religious courts |
| 2% | Police | 2% | Community leadership |
| 0% | Civil courts | 2% | Religious leader/mullah |

Credit access

% of assessed KIs by reported change in access to credit (loans) for business purposes in the previous year in their Gozar:

Of assessed KIs that reported their access to credit in their Gozar had decreased, the main reasons were:

| | |
|--|-----|
| Banks were closed | 2% |
| Banks limited how much cash withdrawn | 98% |
| Banks reduced the amount of their loans | 0% |
| Banks required more documentation/collateral | 0% |

Challenges

% of assessed KIs by reported number of months tenants usually rented their house/apartments for in their Gozar:

| | |
|---------------------------------|-----|
| One month | 13% |
| More than one month to 3 months | 22% |
| More than 3 months to 6 months | 27% |
| More than 6 months to 1 year | 38% |
| More than 1 year | 0% |

6%

of assessed KIs reported that they had disputes with households renting houses/apartments in their Gozar.

Of assessed KIs that reported having had disputes, the main reported reasons in the Gozar were:⁵

| | |
|--|------|
| Unable to pay rent | 100% |
| Refuse to pay for property agent's service | 0% |
| Disputes about poor services or conditions | 0% |
| Disputes about rental price | 100% |
| Other disagreements with the landlord | 0% |
| Disputes with other renters/neighbors | 0% |

% of assessed KIs by reported by reported methods of how landlords/property agents usually find tenants to rent their houses/apartments in their Gozar:⁵

| | | | |
|------|------------------------------|----|-----------------------------|
| 96% | Family or relative | 6% | Facebook/social network ads |
| 19% | Friend or colleague | 6% | Community leader |
| 100% | Through another broker/agent | 2% | Other Internet ads |
| 0% | Poster or wall advertisement | | |

93% of assessed KIs reported that tenants always paid rent on time in their Gozar.

27% of assessed KIs reported that in the last three month at least one household that rented in their Gozar had experienced an eviction:

Of assessed KIs that reported an eviction had occurred in their Gozar, the main reported reasons were:⁵

| | |
|--|---|
| 89% Unable to pay rent | 78% Disputes about rent price |
| 0% Refuse to pay for property agent's service | 6% Other disagreements with the landlord |
| 0% Dispute about poor services/conditions | 6% Dispute with other renters/neighbours |

| 3% | 30-59 minutes | 0% | Don't know |

% of assessed KIs by income sources that were reported to be available in the community for the majority of households in their Gozar:⁵

| | | | |
|---------------------------------|-----|------------------------------------|------|
| Cash crop farming | 1% | Unskilled daily labour/no contract | 100% |
| Livestock farming | 2% | Skilled daily labour/no contract | 100% |
| Rental properties | 38% | Formal employment/with contract | 21% |
| Business/sale of goods/services | 4% | None | 0% |

5. Respondent could select more than one response.

6. A separate religious school that is separate from a mosque.

Housing Demand

Assessed KIs reported that on average **90%** of the available houses/apartments were rented out during last the month in their Gozar.

Assessed KIs reported on average how many apartments or houses had been rented out over the last month in their Gozar: **58.7**

Assessed KIs reported on average how many apartments/houses had not been rented out and were empty during the last month in their Gozar: **6.2**

% of assessed KIs that reported vacancies, by reported reasons of houses/apartments being vacant in their Gozar:⁵

| | |
|--|-------------|
| Renters cannot afford the rent for a house/apartment | 100% |
| Bad overall condition of the house or apartment | 28% |
| Not safe area to live in | 4% |
| Overall low demand for renting | 18% |
| Renters have returned home or left the country | 77% |

Housing Affordability

Assessed KIs by reported average monthly rental cost⁷ for the following types of houses in their Gozar:

| | |
|----------------------------|------------------|
| One room house | 1,348 AFN |
| Two room house | 2,519 AFN |
| Three room house | 3,564 AFN |
| More than three room house | 4,699 AFN |

% of assessed KIs by reported change in the cost of houses/apartments over the last year in their Gozar:

Assessed KIs by reported average change in the amount of rent⁷ in their Gozar: **937** AFN

100% of assessed KIs reported that they have not any insurance for any houses/apartments in their Gozar.

Assessed KIs by reported average monthly rental cost⁷ for the following types of apartments in their Gozar:

| | |
|--------------------------------|------------------|
| One room apartment | 2,050 AFN |
| Two room apartment | 3,500 AFN |
| Three room apartment | 4,950 AFN |
| More than three room apartment | 6,650 AFN |

% of assessed KIs by reported types of utilities that usually needed to be covered by renters in their Gozar:⁵

| | |
|---|-------------|
| Water supply | 100% |
| Electricity | 100% |
| Heating in winter | 76% |
| Sewerage, centralized water disposal system | 94% |
| Internet | 50% |
| Parking | 0% |
| Cleaning/maintenance/communal services | 73% |

Rental Contract

% of assessed KIs by reported type of contract or agreement landlords or property agents used for the HHs that rent the houses/apartments in their Gozar:⁵

| | |
|--|------------|
| Written agreement with the house/apartment owner | 73% |
| A written agreement with the property dealer | 61% |
| Letter with stamp with community leader | 47% |
| Verbal agreement (no written documentation) | 54% |

% of assessed KIs by period the contract/agreement to rent a house/apartment in their Gozar typically last (in months):⁵

| | |
|----------------------------|---------------------------------|
| 6% One month | 80% > 6 months to 1 year |
| 49% > 1 to 3 months | 33% More than 1 year |
| 95% > 3 to 6 months | |

% of assessed KIs by reported methods through which renters/tenants pay their rent in their Gozar:⁵

| | |
|---------------------------|-------------------------------|
| 99% Cash (direct) | 0% Credit/loan |
| 2% Bank account | 84% Hawala |
| 0% Mobile transfer | 5% In-kind (materials) |

7. All costs were reported in Afghanis (AFN). The exchange rate of 1 USD was recorded at 103.26 AFN at the time of the data collection, [UN Treasury, UN Operational Rates of](#)

[Exchange](#), 01 February 2022.

% of assessed KIs reporting a deposit was usually required to rent properties in their Gozar:⁵

| | |
|----------------------------|-----|
| Less than one month's rent | 33% |
| One month's rent | 50% |
| More than one month's rent | 19% |
| No deposit required | 50% |

Assessed KIs reported the average number of months tenants usually had to pay in advance for their house/apartment was:

2.3
Months

% of assessed KIs reported that rent in their gozar was typically collected by:⁵

| | | | |
|-----|---|-----|---------------------------------------|
| 99% | The owner of the house/apartment | 67% | Relative of the house/apartment owner |
| 13% | The property dealer | | |
| 95% | Representative of the house/apartment owner | | |

% of assessed KIs reported that if they ever had a dispute with a renter over rental arrangements, the person in their Gozar that they would usually go to was:

| | | | |
|-----|-------------------------|-----|-------------------------|
| 41% | Deal with it themselves | 0% | Religious courts |
| 0% | Police | 47% | Community leadership |
| 0% | Civil courts | 13% | Religious leader/mullah |

41%

of assessed KIs reported that landlords/property agents provided proof of payment when the rent was paid by renters/tenants in their Gozar.

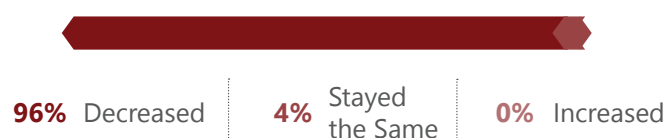

63% of assessed KIs reported tenants had to pay at least one month of rent in advance to rent a house/apartment in their Gozar.

Credit access

% of assessed KIs by reported change in access to credit (loans) for business purposes in the previous year in their Gozar:

Of assessed KIs that reported their access to credit in their Gozar had decreased, the main reasons were:

| | |
|--|-----|
| Banks were closed | 24% |
| Banks limited how much cash withdrawn | 37% |
| Banks reduced the amount of their loans | 7% |
| Banks required more documentation/collateral | 31% |

Challenges

% of assessed KIs by reported number of months tenants usually rented their house/apartments for in their Gozar:

| | |
|---------------------------------|-----|
| One month | 0% |
| More than one month to 3 months | 7% |
| More than 3 months to 6 months | 56% |
| More than 6 months to 1 year | 31% |
| More than 1 year | 6% |

44%

of assessed KIs reported that they had disputes with households renting houses/apartments in their Gozar.

Of assessed KIs that reported having had disputes, the main reported reasons in the Gozar were:⁵

| | |
|--|------|
| Unable to pay rent | 5% |
| Refuse to pay for property agent's service | 66% |
| Disputes about poor services or conditions | 87% |
| Disputes about rental price | 100% |
| Other disagreements with the landlord | 3% |
| Disputes with other renters/neighbors | 5% |

% of assessed KIs by reported by reported methods of how landlords/property agents usually find tenants to rent their houses/apartments in their Gozar:⁵

| | | | |
|-----|------------------------------|-----|-----------------------------|
| 95% | Family or relative | 2% | Facebook/social network ads |
| 94% | Friend or colleague | 28% | Community leader |
| 67% | Through another broker/agent | 0% | Other Internet ads |
| 7% | Poster or wall advertisement | | |

34% of assessed KIs reported that tenants always paid rent on time in their Gozar.

40% of assessed KIs reported that in the last three month at least one household that rented in their Gozar had experienced an eviction:

Of assessed KIs that reported an eviction had occurred in their Gozar, the main reported reasons were:⁵

| | | | |
|-----|--|------|---------------------------------------|
| 88% | Unable to pay rent | 100% | Disputes about rent price |
| 6% | Refuse to pay for property agent's service | 9% | Other disagreements with the landlord |
| 65% | Dispute about poor services/conditions | 9% | Dispute with other renters/neighbours |

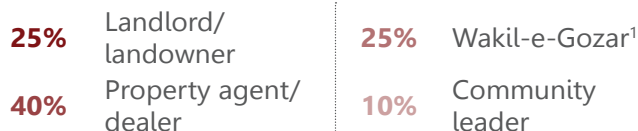

Key Informant Rental Assessment Jalalabad Municipality Nangarhar Province, Afghanistan

February 2022

Respondent Profile

Type of Key Informants (KIs) assessed in their Gozar:¹

% of assessed KIs that reported that they had been working as a property agent or landlord longer than three months in their Gozar:

Rental House/Apartment Availability

Average number of houses³ reported to be currently available by assessed KIs in their Gozar:

175.2

82% of assessed KIs reported there was space to construct new houses for rent in their Gozar. **44%** of those KIs reported that they had plans to construct new houses for rent.

Average number of additional houses reported were planned to be constructed by assessed KIs in their Gozar:

127.7

Average number of apartments⁴ reported to be currently available by assessed KIs in their Gozar:

31

84% of assessed KIs reported there was space to construct new apartments for rent in their Gozar. **34%** of those KIs reported that they had plans to construct new apartments.

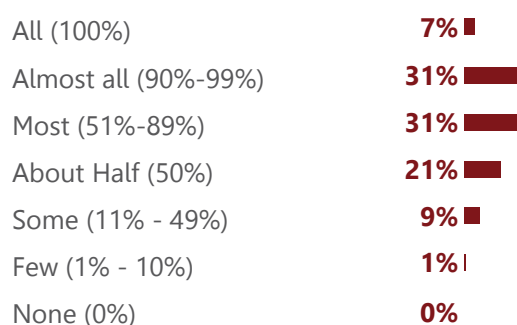

Average number of additional apartments reported were planned to be constructed by assessed KIs in their Gozar:

65.4

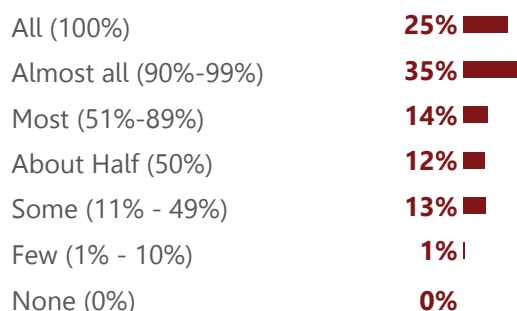

Key Services Availability

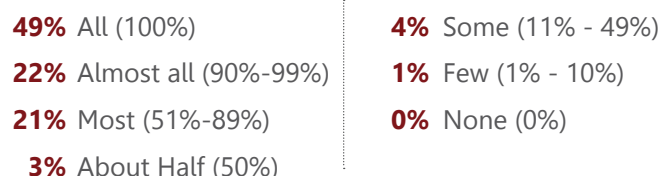

Proportion of KIs reporting on the number of rented houses/apartments with the access to water in their Gozar.

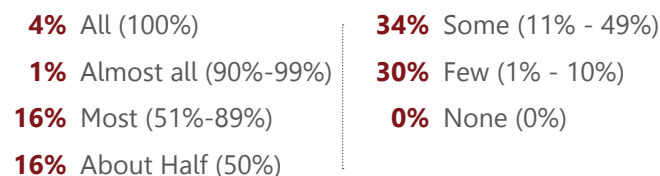

Proportion of KIs reporting on the number of rented houses/apartments with access to electricity in their Gozar.

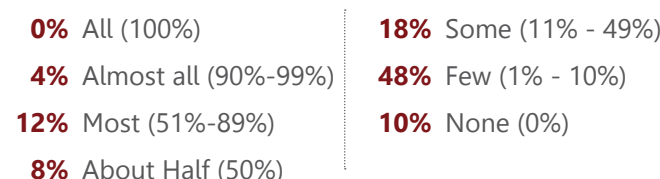

Proportion of KIs reporting on the number of rented houses/apartments with access a latrine/toilet in their Gozar.

Proportion of KIs reporting on the number of rented houses/apartments with a kitchen in a separate room in their Gozar.

Proportion of KIs reporting on the number of rented houses/apartments with a separate room for male and female HH members in their Gozar.

1. In Afghanistan, a Gozar is the informal urban unit denoting a community, analogous to a neighbourhood. Wakil-e-Gozar is an official local representative who is selected by the people of a Gozar to represent their interests to municipal governance.
2. Wakil-e-Gozaars and/or other community leaders who might be providing house/

apartment rental services.

3. House: a structure for living with 1-2 floors and a yard.

4. Apartment: a structure with many different living units inside of the structure, with more than 2 floors and no yard.

Housing Access to Services

% of assessed KIs by reported main source of electricity for the properties in their Gozar:

| | |
|-----------------------------|-----|
| Electricity from power grid | 31% |
| Hydroelectric dam | 36% |
| Solar power | 31% |
| Generator | 0% |
| Battery | 1% |
| None | 0% |

% of assessed KIs by reported types of waste-water disposal methods available in their Gozar:

| | |
|------------------------------------|-----|
| Septic tank | 4% |
| Simple cesspit/ hole in the ground | 8% |
| Open drainage/ street channels | 87% |
| Municipal sewage network | 1% |

% of assessed KIs by reported types of solid waste disposal methods available in their Gozar:

| | |
|-----|----------------------------|
| 29% | Garbage collection service |
| 1% | Burned |
| 0% | Buried |
| 1% | Community Containers |
| 69% | Throw in open field |

31% of assessed KIs reported that there was an active health centre accessible from all people, and **33%** of those KIs reported that it was accessible to some people from the houses/apartments in their Gozar.

Assessed KIs reporting on average time length by walking from rental areas/buildings in their Gozar to the nearest health center.

| | | | |
|-----|----------------------|----|-------------------|
| 45% | Less than 15 minutes | 0% | 1-2 hours |
| 39% | 15-29 minutes | 2% | More than 2 hours |
| 14% | 30-59 minutes | 0% | Don't know |

87% of assessed KIs reported that there were functional public schools accessible for all HHs, and **7%** of those KIs reported those schools were accessible to some HHs in the houses/apartments in their Gozar.

62% of assessed KIs reported that there were functional private schools accessible for all HHs, and **30%** of those KIs reported those private schools were accessible for some HHs in the houses/apartments in their Gozar.

% of assessed KIs by reported types of schools that are currently accessible for households in their Gozar:⁵

| | |
|--------------------------------|------|
| Primary school | 100% |
| High school | 82% |
| Secondary school | 61% |
| Religious madrasa ⁶ | 14% |
| Community based education | 0% |
| Technical training centre | 0% |

% of assessed KIs reporting girls were able to attend primary schools in their Gozar:

| | | | |

| 1% | 30-59 minutes | 0% | Don't know |

% of assessed KIs by income sources that were reported to be available in the community for the majority of households in their Gozar:⁵

| | | | |
|---------------------------------|-----|------------------------------------|-----|
| Cash crop farming | 26% | Unskilled daily labour/no contract | 84% |
| Livestock farming | 23% | Skilled daily labour/no contract | 53% |
| Rental properties | 70% | Formal employment/with contract | 48% |
| Business/sale of goods/services | 82% | None | 0% |

5. Respondent could select more than one response.

6. A separate religious school that is separate from a mosque.

Housing Demand

Assessed KIs reported that on average **64%** of the available houses/apartments were rented out during last the month in their Gozar.

Assessed KIs reported on average how many apartments or houses had been rented out over the last month in their Gozar: **88.6**

Assessed KIs reported on average how many apartments/houses had not been rented out and were empty during the last month in their Gozar: **33.8**

% of assessed KIs that reported vacancies, by reported reasons of houses/apartments being vacant in their Gozar:⁵

| | |
|--|------------|
| Renters cannot afford the rent for a house/apartment | 95% |
| Bad overall condition of the house or apartment | 36% |
| Not safe area to live in | 2% |
| Overall low demand for renting | 66% |
| Renters have returned home or left the country | 69% |

Housing Affordability

Assessed KIs by reported average monthly rental cost⁷ for the following types of houses in their Gozar:

| | |
|----------------------------|------------------|
| One room house | 1,566 AFN |
| Two room house | 2,886 AFN |
| Three room house | 4,468 AFN |
| More than three room house | 6,682 AFN |

% of assessed KIs by reported change in the cost of houses/apartments over the last year in their Gozar:

Assessed KIs by reported average change in the amount of rent⁷ in their Gozar: **2,247** AFN

95% of assessed KIs reported that they have not any insurance for any houses/apartments in their Gozar.

Assessed KIs by reported average monthly rental cost⁷ for the following types of apartments in their Gozar:

| | |
|--------------------------------|-------------------|
| One room apartment | 2,719 AFN |
| Two room apartment | 5,109 AFN |
| Three room apartment | 7,859 AFN |
| More than three room apartment | 10,875 AFN |

% of assessed KIs by reported types of utilities that usually needed to be covered by renters in their Gozar:⁵

| | |
|---|------------|
| Water supply | 84% |
| Electricity | 77% |
| Heating in winter | 7% |
| Sewerage, centralized water disposal system | 1% |
| Internet | 0% |
| Parking | 20% |
| Cleaning/maintenance/communal services | 20% |

Rental Contract

% of assessed KIs by reported type of contract or agreement landlords or property agents used for the HHs that rent the houses/apartments in their Gozar:⁵

| | |
|--|------------|
| Written agreement with the house/apartment owner | 66% |
| A written agreement with the property dealer | 90% |
| Letter with stamp with community leader | 31% |
| Verbal agreement (no written documentation) | 12% |

% of assessed KIs by period the contract/agreement to rent a house/apartment in their Gozar typically last (in months):⁵

| | |
|----------------------------|---------------------------------|
| 4% One month | 91% > 6 months to 1 year |
| 21% > 1 to 3 months | 33% More than 1 year |
| 69% > 3 to 6 months | |

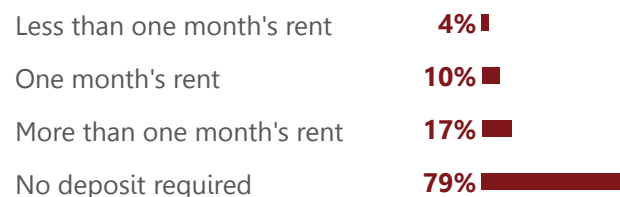

% of assessed KIs by reported methods through which renters/tenants pay their rent in their Gozar:⁵

| | |
|---------------------------|--------------------------------|
| 99% Cash (direct) | 5% Credit/loan |
| 25% Bank account | 56% Hawala |
| 0% Mobile transfer | 17% In-kind (materials) |

Annex 2 - Households Questionnaire

| Research Question | IN # | Indicator / Variable | Questions | Question Type | Choices | Data Collection Level |
|-------------------|------|-----------------------------------|--|---------------|--------------------------------|-----------------------|
| Meta-data | B1 | Consent | My name is [[name]] and I work for REACH, a part of the humanitarian NGO ACTED. On behalf of UNHCR and the Emergency Shelter and NFI cluster, we are conducting an assessment of rental properties, prices, and availability in order to inform rental support programmes so that the Emergency Shelter and NFI Cluster and its partner NGOs can provide the correct rental assistance to people in need of shelter in seven main regional cities in Afghanistan. The questions are specifically about the current housing and accommodation situation for your household in your building/ rental area, including the condition of your house/apartment, its costs, amenities, services, and rental arrangements. The survey usually takes about 30 – 45 minutes to complete. Any information that you provide will be confidential and anonymous. I would like to draw your attention to the fact that, based on the information collected, we develop statistics without displaying your personal data (names, location, contact details). This survey is voluntary and you can choose not to answer any or all of the questions; however we hope that you will participate since your views are important. Participation in the survey does not have any impact on whether you or your family receive assistance. Do you agree to participate? | | | HH |
| | B2 | Consent to contact again | By agreeing to answer our questions, you give us permission to use the data exclusively for statistics purposes. The answers you provide will not be shared with anyone not authorized within and outside our organization. May we take your phone number in case we need to conduct any follow-up calls with you if some of the information is not clear and for quality control purposes? | Select one | Yes | HH |
| | B3 | | What is your phone number? | | No | |
| | B4 | Households Renting | Do you rent your house/apartment? | Select one | Yes | HH |
| | | | | | No, I own my house/apartment | |
| | | | | | No, I lease my house/apartment | |
| | B5 | Consent to contact property owner | In addition to speaking with renters like yourself, we would also like to speak with landlords, community leaders, or rental agents to understand the rental market from the supplier's perspective. We will not ask them anything about you or your home/ apartment. We want to ask them about the overall housing market and main property types that they manage. Would you be willing to provide the contact for your landlord, community leader, or property agent? | Select one | Yes | HH |
| | | | | | No | |
| | B6 | Type of property owner /Contact | What type of property owner or manager are they? | Select one | Landlord/ landowner | HH |
| | | | | | Property agent/ dealer | |
| | | | | | Community leader | |
| | B7 | | Please record their contact number: | Fill | | HH |

| Research Question | IN # | Indicator / Variable | Questions | Question Type | Choices | Data Collection Level |
|---|------|---|--|---------------|---|-----------------------|
| What is the demographic profile of urban renters and landlords in Afghanistan, and what role do these demographics play in access in renting? | C1 | % of respondents by gender | Select the respondent's gender | Select one | Male | HH |
| | | | | | Female | |
| | C2 | average age of respondents | How old are you? (complete years) | Fill | | HH |
| | C3 | % of respondents that are the head of the household | Do you consider yourself the head of the household, a person who takes an active part in decision-making for HH? (Note: the HH head - the primary decision maker who is currently living with the household and usually have the final say on important issues affecting the household) | Select one | Yes | HH |
| | | | | | No | |
| What is the demographic profile of urban renters and landlords in Afghanistan, and what role do these demographics play in access in renting? | | Household Information | | | | Note |
| | D1 | Head of household age | Head of HH age: | Fill | | HH |
| | D2 | Head of household gender | Head of household gender: | Select one | Male | HH |
| | | | | | Female | |
| | D3 | Head of household marital status | What is the marital status of the head of household? | Select one | Married | HH |
| | | | | | Married, but spouse living elsewhere in Afghanistan | |
| | | | | | Married, but spouse living in a different country | |
| | | | | | Single | |
| | | | | | Divorced | |
| | | | | | Widowed | |
| | | | | | Prefer not to answer | |

| Research Question | IN # | Indicator /Variable | Questions | Question Type | Choices | Data Collection Level |
|---|------|-------------------------------|--|-----------------------|---|-----------------------|
| What is the demographic profile of urban renters and landlords in Afghanistan, and what role do these demographics play in access in renting? | | | For the purpose of our assessments, a household is defined as a group of people who live under the same roof, sharing income and meals before the displacement/becoming hosts. | | | Note |
| | E1 | # of total HH members | Total household members | Fill | | HH |
| | E2 | Population Age/Gender Pyramid | Number of newborns/Infants girls (0-5 yrs) | Fill | | HH |
| | E3 | | Number of newborns/Infants boys (0-5 yrs) | Fill | | HH |
| | E4 | | Number of girls (6-17 yrs) | Fill | | HH |
| | E5 | | Number of boys (6-17 yrs) | Fill | | HH |
| | E6 | | Number of female adults [18-59] | Fill | | HH |
| | E7 | | Number of male adults [18-59] | Fill | | HH |
| | E8 | | Number of elderly females [60+] | Fill | | HH |
| | E9 | | Number of elderly males [60+] | Fill | | HH |
| | | HH Vulnerability Factors | | | | Note |
| | E10 | # of children in HH under 2 | How many of the newborns/infants are under 24 months/ 2 years old? | Fill | | HH |
| | | HH Vulnerability Factors | Does the head of HH (HoHH) suffer from any of the following difficulties: seeing, even if wearing glasses; hearing, even if using a hearing aid(s); walking or climbing steps; remembering or concentrating; self-care, such as washing/dressing; communication problems (speaking/making people understand); chronic illness affecting quality of life? | Select one | Yes | HH |
| | | | | | No | |
| | | | If HH head has difficulty, which type? | Choose all that apply | Seeing, even if wearing glasses | HH |
| | | | | | Hearing, even if using a hearing aid(s) | |
| | | | | | Walking or climbing steps | |
| | | | | | Remembering/ concentrating | |
| | | | | | With self-care, such as washing/dressing | |
| | | | | | Communication problems (speaking/ making people understand) | |
| | | | | | Chronic illness affecting the quality of life | |

| Research Question | IN # | Indicator /Variable | Questions | Question Type | Choices | Data Collection Level |
|---|--|---|---|---------------|---------|-----------------------|
| What is the demographic profile of urban renters and landlords in Afghanistan, and what role do these demographics play in access in renting? | | HH Vulnerability Factors | Apart from HoHH, do any of the members of this household have any difficulty seeing even if wearing glasses? | Select one | Yes | HH |
| | | | No | | | |
| | | | Apart from HoHH, do any of the members of this household have any difficulty hearing even using a hearing aid? | Select one | Yes | HH |
| | | | No | | | |
| | | | Apart from HoHH, do any of the members of this household have any difficulty walking or climbing steps? | Select one | Yes | HH |
| | | | No | | | |
| | | | Apart from HoHH, do any of the members of this household have any difficulty remembering or concentrating? | Select one | Yes | HH |
| | | | No | | | |
| | | | Apart from HoHH, do any of the members of this household have any difficulty with self care (such as) washing all over or dressings? | Select one | Yes | HH |
| | | | No | | | |
| Using your usual language, apart from HoHH, do any of the members of this household have any difficulty communicating for example, understanding or being understood? | Select one | Yes | HH | | | |
| No | | | | | | |
| Apart from HoHH, do any of the members of this household have any chronic illness affecting the quality of life and ability to earn income? | Select one | Yes | HH | | | |
| No | | | | | | |
| [If yes] In total how many members of this household suffer from the above-mentioned difficulties (excluding HoHH)? | Fill | | HH | | | |
| How many of them are female between the age of 18 and 59? | Fill | | HH | | | |
| How many of them are male between the age of 18 and 59? | Fill | | HH | | | |
| What is the demographic profile of urban renters and landlords in Afghanistan, and what role do these demographics play in access in renting? | In the next section we will talk about past movements within Afghanistan and/or to other countries. Please answer the questions, considering the experience of the majority of the household, not just the one of the household head | | | | | Note |
| | F1 | % of HH in their Area of Origin | Is this location the area of origin for the majority of household members? | Select one | Yes | HH |
| | | | | | No | |
| | F2 | % of HHs that fled their country and returned | Have the majority of household members including you ever been forcibly displaced and fled to another country? | Select one | Yes | HH |
| | | | | | No | |
| F3 | % of HHs currently IDPs | Have the majority of the household members ever been forcibly displaced from their homes and fled to another province or district in Afghanistan? | Select one | Yes | HH | |
| | | | | No | | |

| Research Question | IN # | Indicator / Variable | Questions | Question Type | Choices | Data Collection Level |
|---|------|--|--|---------------|----------------|-----------------------|
| What is the demographic profile of urban renters and landlords in Afghanistan, and what role do these demographics play in access in renting? | G1 | IDP HH Area of Origin | In which province did you live before you were displaced for the first time? | Select one | Province list | HH |
| | G2 | Date of IDP HH displacement | When was your household first displaced? | Date | | HH |
| | G3 | Date of IDP HH arrival | When did your household arrive at the current location? | Date | | HH |
| What is the demographic profile of urban renters and landlords in Afghanistan, and what role do these demographics play in access in renting? | H1 | Date Returnee HH fled Afghanistan | (if returnee) when did you last flee Afghanistan? | Date | | HH |

Annex 3 - Key Informant Questionnaire

| Research Question | IN # | Indicator /Variable | Questions | Question Type | Choices | Data Collection Level |
|---|------|----------------------------|--|---------------|---|-----------------------|
| Meta-data | B1 | Consent | My name is [[name]] and I work for [[name of organisation]]. On behalf of UNHCR and the Emergency Shelter and NFI cluster, we are conducting an assessment of rental markets in your gozar so that NGOs trying to support vulnerable households with rental assistance will have the right information on rental conditions and prices. The questions are specifically about cost, availability and capacity of housing and rental markets. You will be asked these questions ONLY ABOUT CONDITIONS IN THIS GOZAR, not the city as a whole. The survey usually takes about 30 – 45 minutes to complete. Any information that you provide will be confidential and anonymous. I would like to draw your attention to the fact that, based on the information collected, we develop statistics without displaying your personal data or information that can be traced to you. This survey is voluntary and you can choose not to answer any or all of the questions; however we hope that you will participate since your views are important. Do you agree to participate? | | | KI |
| | B2 | Consent to contact again | By agreeing to answer our questions, you give us permission to use the data exclusively for statistics purposes. The answers you provide will not be shared with anyone not authorized within and outside our organization. May we take your phone number in case we need to conduct any follow-up calls with you if some of the information is not clear and for quality control purposes? | Select one | Yes No | KI |
| | B3 | | What is your phone number? | Fill | | |
| What is the demographic profile of urban renters and landlords in Afghanistan, and what role do these demographics play in access in renting? | C1 | % of respondents by gender | Select the respondent's gender | Select one | Male Female | KI |
| | C2 | average age of respondents | How old is the respondent? | Fill | | KI |
| | C3 | Respondent type | What type of property dealer/owner/community leader would you describe yourself as? | Select one | Landlord/landowner Property agent/dealer Community leader Wakil-e-Gozar Other | KI |
| | C3.1 | | If other, please specify: | Fill | | |
| | C4 | KI experience | Have you been working as a property agent or landlord in [name of city] longer than three months? | Select one | Yes No (less than 3 months in the targeted area) I am not a property agent | KI |
| | | | | | | |

Annex 4 - ES/NFI Vulnerability Criteria

The Emergency Shelter and Non-Food Items Cluster maintains a set of vulnerability criteria to determine which households are considered to be in need of shelter assistance.

In order to ensure that REACH accounted for vulnerable populations in the assessment, REACH integrated ES/NFI Cluster's vulnerability criteria into its analysis, using the following methodology. Based on household responses, REACH calculated whether the household met each criteria or not. If the criteria were met, a weighted score between 1 and 3 was given to the household; otherwise, the household was assigned a score of 0. All of the weighted scores were then added up, and based on the final score, the assessed household was assigned one of the categories of 1) not sufficiently vulnerable, 2) vulnerable, or 3) most vulnerable. All final vulnerability scores should be taken as an understanding of vulnerability and the need for assistance based on the ES/NFI Cluster's priorities. Households may still be vulnerable and require additional assistance even if they do not meet these prescribed vulnerability thresholds.

| Calculation of the composite indicator | Total Score | Category of households |
|--|-------------|-----------------------------|
| Step 1: For each indicator, if a household met the criteria, a score equal to the weight was applied. | 0 to 8 | Not Sufficiently Vulnerable |
| Step 2: All of the weighted scores from each indicator were added up. | 9 to 16 | Vulnerable |
| Step 3: Each household was then assigned a category based on its total score received. | 17 to 24 | Most Vulnerable |
| Step 4: All households were they aggregated by municipality, showing a percentage representative of the population that was considered to be vulnerable. | | |

| SN | Indicator | Description | Questionnaire questions | Questionnaire answer | Weight |
|----|--|--|---|---|--------|
| 1 | Woman or child head of household without an adult male | (Head of house was under 18) OR (Head of household was female, AND marital status was widowed, separate, or divorced, AND Household did not receive any income as remittances from within Afghanistan or Abroad; AND Household had at least one breadwinner AND any adult males in the household between 18 and 59 had a disability) | Head of HH age | <18 | 3 |
| | | | Head of HH gender | Female | |
| | | | What is the marital status of the head of household? | Married, but spouse living elsewhere in Afghanistan | |
| | | | | Married, but spouse living in a different country | |
| | | | | Divorced | |
| | | | | Widowed | |
| | | | How many breadwinners [females](currently working and over 16 years) are in your household? | = > 1 | |
| | | | How many of them [disabled] are male between the age of 18 and 59? | = > 1 | |
| | | | In the last 30 days, has money come into the household through the following means? | ≠ Remittances / gifts | |

| SN | Indicator | Description | Questionnaire questions | Questionnaire answer | Weight |
|----|---|--|---|----------------------------|--------|
| 2 | Households with a dependency ratio of 8 or more | Total number of household members / (sum of adult males (age 18 to 59) and female breadwinners - sum of disabled adult males and disabled female breadwinners) | Total Household Members | ## | =>8 |
| | | | Number of male adults [18-59] | ## | |
| | | | How many of them [breadwinners] are women? | ## | |
| | | | How many of them [disabled] are male between the age of 18 and 59? | ## | |
| | | | Head of HH gender | Female | |
| | | | Does the HoHH suffer from any of the following difficulties: seeing, even if wearing glasses; hearing, even if using a hearing aid(s); walking or climbing steps; remembering or concentrating; self-care, such as washing/dressing; communication problems (speaking/making people understand); chronic illness affecting quality of life? | Yes, disabled adult female | |
