

Legend

Multi-hazard risk	Moderate
Very Low	High
Low	Very High

The risk assessment for multiple hazards impacting Grama Niladhari Divisions (GNDs) involved the summation of individual risk indices associated with distinct hazards, including flood risk, drought risk, and the Human and Elephant Conflict(HEC) index. This approach entails the aggregation of risk metrics from each hazard category to derive a comprehensive understanding of the overall risk faced by the respective GNDs. By quantifying and combining the specific risks associated with floods, droughts, and other relevant factors, this method facilitates a holistic evaluation of the cumulative risk landscape within the GNDs.
