FACTSHEET

Camp Profile: Twahina

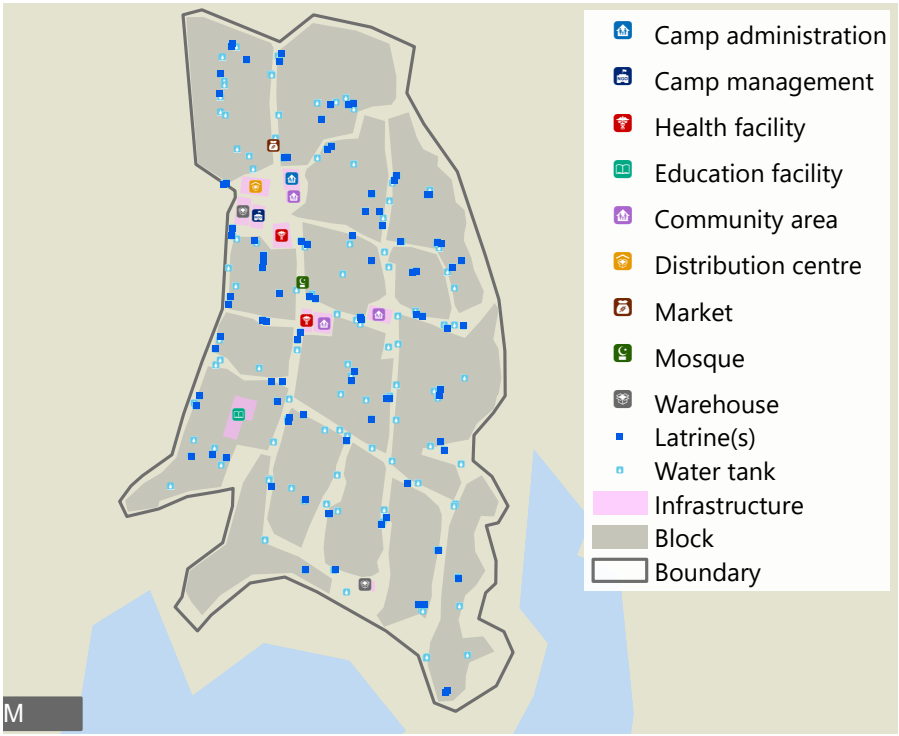
May 2024
Raqqa governorate, Syria

- Lack of income limited access to essential services, with **88% of** households (HHs) **unable to afford healthcare and 55% found transportation too expensive.**
- Less than a quarter of girls aged 12-17 were in school, likely due to the pressure to contribute to HH income through **child labor**. This suggests that HHs are resorting to livelihood coping strategies such as **child work, borrowing money, and reducing non-food expenditures** to meet basic needs
- HHs reported drinking water issues, including insufficient storage capacity (27%) and reduced water supply (24%), **with 47% of households resorting to negative coping strategies** to address the lack of water supply.

CONTEXT & RATIONALE

Twahina emerged as an informal settlement from 2014 to 2016, primarily sheltering residents from Hama and Homs escaping conflict. In 2018, humanitarian support formalized Twahina into a structured informal camp, drawing residents from eastern Aleppo. In 2019 until September 2021, IDP arrivals followed a regional military operation. In 2022, Twahina saw an influx of newcomers from nearby informal settlements, due to deteriorating economic conditions in the area, expanding its population, and reinforcing its role as a regional community hub.

Camp Overview



METHODOLOGY

This profile provides an overview of humanitarian conditions in Twahina camp. Primary data was collected in May 2024 through a representative HH survey. The assessment included 97 HHs who were randomly sampled using a spatial sampling methodology. Sample size was calculated to achieve a 95% confidence level and 10% margin of error based on population figures provided by camp management who were included in the assessment as Key Informants (KIs). KI interviews were used to support and triangulate the HH survey findings. The findings based on KIs are indicative only. For more details on the methodology, refer to page 10.

CAMP OVERVIEW

Key Informant Data

Number of individuals:	4,662
Number of HHs:	920
Number of shelters:	1,094
First arrivals:	June - 2018
Camp area:	0.4 km²

Camp Location

DEMOGRAPHICS

Key Informant Data

Estimated population breakdown:

Male	Age	Female
1%	61+	2%
17%	18-60	21%
7%	12-17	7%
9%	6-11	9%
7%	3-5	6%
6%	0-2	6%

Household Data

Percentage of HHs belonging to vulnerable groups:

Female-headed HHs:	16%	Single heads of HH:	13%
HHs with pregnant/lactating women:	49%	Single female heads of HH:	13%
HHs with infants (0-2 years):	39%	HHs with elderly (>60 years):	14%

SECTORAL MINIMUM STANDARDS

		Target	Result	Achievement
Shelter	Average number of individuals per shelter	max 4.6	5	●
	Average covered living space per person	min 3.5 m²	5 m²	●
	Average camp area per person	min 45 m²	86 m²	●
Health	% of 0-5 year olds who have received polio vaccinations	100%	82%	●
	Presence of health services within the camp	Yes	Yes	●
Protection	% of HHs reporting safety/security issues in past two weeks	0%	62%	●
Food	% of HHs receiving food assistance in the 30 days prior to data collection (including vouchers and cash for food)	100%	100%	●
	% of HHs with acceptable food consumption score (FCS)[2]	100%	40%	●
Education	% of children aged 6-17 accessing education services	100%	55%	●
WASH	Persons per latrine (communal or HH)	max. 20	20	●
	Persons per shower (communal)	max. 20	-	●
	Frequency of solid waste disposal	min. twice weekly	Everyday	●

Targets based on Sphere and humanitarian minimum standards.[3]
● Minimum standard met ● 50-99% of minimum standard met ● 0-49% of minimum standard met

FOOD SECURITY

Household Data

Food Consumption

Percentage of HHs by **Food Consumption Score**[4] (FCS) category:

Acceptable	**40%**
Borderline	**47%**
Poor	**12%**

Percentage of HHs by **HH Dietary Diversity Score**[5] (HDDS) category:

High	**44%**
Medium	**42%**
Low	**13%**

Food Assistance

100% of HHs had reportedly received **food assistance** (incl. vouchers and cash for food) in the 30 days prior to data collection.

Percentage of HHs reached by reported **type of food assistance received** in the 30 days prior to data collection:

1. Bread distribution **100%**
2. Food basket(s) **89%**
3. Cash (for food) **34%**

Top three **food items** HHs would like to receive more of (HHs could select up to three options):

1. Sugar **87%**
2. Vegetable Oil **53%**
3. Rice **34%**

Food-Based Coping Strategies

Top three **negative food-based coping strategies** reported by HHs (employed at least once in the last seven days):

1. Relied on less preferred or less expensive food **99%**
2. Rely on food which was borrowed from shopkeepers to be paid later **80%**
3. Reduced the number of meals eaten per day **52%**

LIVELIHOODS

Household Data

Primary Income Sources

Top three **income sources** reported by HHs for the six months preceeding data collection (HHs could select as many options as applicable. The sum of percentages may exceed 100%):

1. Work outside camp **73%**
2. Loans from non-family members **46%**
3. Loans or support from family and friends inside Syria **25%**

Debt

96% of HHs reported that they had debt. These HHs had a median debt load amounting to **3,742,634 SYP** (**275 USD**).

Top three **reasons for taking on debt** reported by HHs that reported debt (HHs could select up to three options):

1. Food **95%**
2. Healthcare **81%**
3. Clothing or non-food items (NFI) **34%**

Livelihood Coping Strategies

Top three **livelihood-related coping strategies** used in the 30 days prior to data collection reported by HHs (HHs could select up to three options):

1. Borrowed money to meet essential needs **95%**
2. Reduce non-food essential expenses (health, education, etc.) **78%**
3. Children under 15 years old worked **16%**

SHELTER ADEQUACY

Key Informant Data

Average number of people per HH:* **5**

Average number of shelters per HH:* **1**

Occupation rate of shelters in camp:* **100%**

Top three **shelter needs** reported by KIs:

1. New Tents
2. Additional Tents
3. Plastic Sheeting

*calculation based on KI interviews

Risks of **flooding** as reported by KIs:

Percentage of tents prone to flooding: 10%

Presence of water drainage channels in shelters: None

Household Data

Top three most commonly reported **shelter item needs** reported by HHs (HHs could select up to three options):

1. Plastic sheeting or Tarpaulins **87%**
2. New tents **77%**
3. Timber **38%**

5% of HHs reported **hazards** in their block such as **uncovered pits** (**4%**) and **electricity hazards** (**1%**).

Most commonly reported **light sources** inside shelters (HHs could select as many options as applicable. The sum of the percentages will not be equal to 100%):

1. Light powered by solar panels **88%**
2. Rechargeable flashlight or battery-powered lamp **10%**
3. Flashlight or battery-powered lamp with disposable batteries **6%**

Most commonly used **kitchen types** reported by HHs:

1. Makeshift kitchen **80%**
2. Cooking inside inhabited shelter **10%**
3. Private kitchen **7%**

FIRE SAFETY

Key Informant Data

As reported by KIs, one fire extinguisher per block was available to camp residents. KIs also reported that camp management had provided camp residents with fire safety information in the three months prior to data collection.

Household Data

80% of HHs reported that they **had received information about fire safety**, of which **6%** reported difficulties with comprehending the information. **94%** reported knowing of a fire point in their block.

NFI NEEDS

Key Informant Data

Top three anticipated NFI needs for the three months following data collection, as reported by KIs:

1. Detergent for dishes
2. Batteries
3. Fans

WATER

Water Sources

Primary water sources reportedly used by HHs:

1. Public tap/standpipe (e.g. from water tank) **99%**
2. Piped connection to house (or neighbours) **1%**

Drinking water issues reported by HHs (HHs could select as many options as applicable. The sum of the percentages will not be equal to 100%):

1. Insufficient storage capacity **27%**
2. Reduced water supply **24%**
3. Water tasted bad **18%**

Water Coping Strategies

47% of HHs reportedly used **negative coping strategies** to address a lack of water in the two weeks prior to data collection.

Most commonly used negative coping strategies reported by HHs (HHs could select as many options as applicable. The sum of the percentages will not be equal to 100%):

1. Relied on previously stored water **31%**
2. Modified hygiene practices (bathe less, etc) **22%**
3. Collected water from unprotected source (e.g. spring, stream, pond) **11%**

SANITATION AND HYGIENE

Latrines and Shower Definitions

Communal latrines and showers are shared by more than one HH.
HH latrines and showers are only used by one HHs.
This can also include informal designations which are not officially enforced.
A **shower** is defined as a designated place to shower, as opposed to bathing in a shelter (i.e., using a bucket).

Latrines

Primarily used latrine types reported by HHs:

1. Pit latrine with slab **95%**
2. Pit latrine without slab / open pit **5%**

Percentage of HHs reporting members **not being able to access latrines** (HHs could select as many options as applicable. The sum of percentages may exceed 100%):

1. Everyone can access toilets **97%**
2. Persons with disabilities **2%**
3. Boys (0-17) **1%**

Showers

Primarily used shower types reported by HHs:

1. Bathing inside shelter (not in a shower) **96%**
2. Bathing outside of shelter (not in a shower) **3%**
3. Private showers inside shelter **1%**

Handwashing and Soap

92% of HHs reported they did **not have access to a private handwashing** facility.

85% of HHs reported **having hand/body soap** available at the time of data collection.

93% of HHs reported **difficulties obtaining hand/body soap**. Among all HHs:

1. Soap was too expensive **74%**
2. Soap distributed was not enough **43%**
3. Soap was distributed infrequently **32%**

WASTE DISPOSAL

Household Data

Top three most common **waste-disposal related challenges** reported by HHs (HHs could select as many options as applicable. The sum of the percentages will not be equal to 100%):

1. Insufficient number of bins/ dumpsters **11%**
2. Bins were overfilled and there was garbage on the ground **5%**
3. Infrequent garbage collection and removal **2%**

Key Informant Data

Primary waste disposal system: Everyday collection by NGO
Disposal location: Landfill 8km from the camp
Sewage system: Desludging

HEALTH

General Health

Key Informant Data

According to KIs, there are 3 health facilities available inside the camp. Furthermore, there is a functional, accessible health facility available 30km outside the camp.

Household Data

Of the **97%** of HHs who reportedly required treatment in the 6 months prior to data collection, **99%** reported barriers to accessing medical care. Of HHs who reported barriers, the most commonly reported barriers were:

1. Cannot afford price of medicines **93%**
2. Cannot afford treatment costs **88%**
3. Lack of medicines and/or medical equipment at facilities **64%**

36% of HHs reported that a **member had given birth** after moving to the camp.

Child and Infant Health

Key Informant Data

Camp management did not report that infant nutrition items had been distributed in the 30 days prior to data collection. The following **nutrition activities** reportedly took place in the past 3 months prior to data collection[8]:

Screening and referral for malnutrition:	**YES**
Treatment for moderate-acute malnutrition:	**NO**
Treatment for severe-acute malnutrition:	**NO**
Micronutrient supplements:	**NO**
Blanket supplementary feeding program:	**YES**
Promotion of breastfeeding:	**YES**

Household Data

Percentage of children under five years old that were reportedly vaccinated against **polio**[6] **82%**

Percentage of children under two years old that had reportedly received the **DTP vaccine**[7] **74%**

Percentage of children under five years old that had reportedly received the **MMR vaccine**[7] **76%**

CAMP MANAGEMENT & COMMITTEES

Household Data

Top three **sources of information** reported by HHs (HHs could select as many options as applicable. The sum of percentages may exceed 100%):

1. Community leaders **84%**
2. Camp management **26%**
3. Friends and neighbours (word of mouth) **12%**

Top three **information needs** reported by HHs (HHs could select as many options as applicable. The sum of percentages may exceed 100%):

1. Livelihood and job opportunities in area of origin **93%**
2. Security situation in your area of origin (ongoing armed conflict, etc) **71%**
3. Functioning of basic services in area of origin **57%**

All camp managers reported that a complaint mechanism exists with a **special mechanism adapted to the Annex**. Knowledge of mechanisms reported by HHs:

Reported knowing who manages the camp:	**85%**
Reported to be unsure who manages the camp:	**14%**
Reported knowing of a complaint box in the camp:	**94%**
Reported knowing who to contact to raise concerns:	**98%**

Key Informant Data

Committees reported to be present:

Camp management	YES	Youth committee	YES
Women's committee	YES	Maintenance committee	YES
WASH committee	NO	Distribution committee	NO
Health committee	YES		

DISPLACEMENT

Household Data

Movement intentions for the 12 months following data collection reported by HHs:

Remain in the camp	**92%**
Return to area of origin	**0%**
Move to another location in Syria	**0%**
Move abroad	**0%**
Do not know	**8%**

Most commonly reported resources that would enable HHs **to leave the camp**:

1. Job opportunities in the destination **90%**
2. Provision of housing in another location **51%**
3. Rehabilitation or provision of housing in AoO **31%**

Key Informant Data

Movement in the 30 days prior to data collection: New arrivals: 0 individuals Departures: 0 individuals

FREEDOM OF MOVEMENT

87% of HHs reportedly had experienced **barriers when trying to leave the camp** in the two weeks prior to data collection.

1. Insufficient transportation **64%**
2. Transportation options available but too expensive **55%**
3. Site departure conditions (need approval) **35%**

Conditions necessary to **leave the camp,** as reported by HHs:

1. Residents can leave without providing a reason **58%**
2. Residents need to provide a reason, but non-medical reasons are accepted **42%**

PROTECTION

62% of HHs reported being **aware of safety and security issues** in and close to the camp during the two weeks prior to data collection.

Most common **security concerns** reported by HHs (HHs could select as many options as applicable. The sum of the percentages will not be equal to 100%):

1. Danger from snakes, scorpions, mice, dogs, etc. **43%**
2. Theft **28%**
3. Disputes between residents **8%**

56% of all HHs reported that at least one **adult** suffered or showed signs of **psychosocial distress or trauma** such as nightmare, lasting sadness, extreme fatigue, being often tearful or extreme anxiety, in the last 30 days.

3% of HHs with children aged 0 -17 reported that at least one **child** suffered or showed signs of **psychosocial distress or trauma** such as nightmare, lasting sadness, extreme fatigue, being often tearful or extreme anxiety, in the last 30 days.

Percentage of HHs reported **missing documents** issued by the government of Syria or local authorities:

Birth certificate	18%
Marriage certificate	1%

Gender-Related Protection

70% of HHs reported **protection issues.** The top reported issues among all HHs were:

1. Early marriage (girls below 18 years old) **38%**
2. Denial of resources, opportunities, or services **3%**

97% of HHs with at least one woman or girl above the age of 11 reported **knowing about** designated **spaces for women and girls** in the camp.

55% of HHs reportedly knowing about designated spaces for women and girls reported that female members of their HH **attended a designated space for women and girls** in the 30 days prior to data collection.

Child Protection

44% of HHs reported child protection concerns in the camp. Among those, the most commonly reported concerns included:

1. Early marriage (below 18 years old) **40%**
2. Child headed households **11%**
3. Children being at risk of violence inside or outside the home **1%**

87% of HHs with at least one child reported **knowing about child-friendly spaces** in the camp.

40% of HHs reportedly knowing about designated spaces for children reported that a child from their HH **attended a child-friendly space** in the 30 days prior to data collection.

CHILDREN WORKING

5% of HHs with **children under 12** reported that at least one child in that age group was working at the time of data collection. Among those, the most reported activities were:

1. Agriculture **100%**

51% of HHs with **children between the ages of 12-17** reported that at least one child in that age group was working at the time of data collection. Among those, the most reported activities were:

1. Agriculture **100%**
2. Other harsh or dangerous labour (please specify) **12%**
3. Domestic labour **4%**

SCHOOL ATTENDANCE (CHILDREN AGED 6-17)

Household Data

55% of children aged 6-17 were reportedly **going to school either inside or outside the camp**.

70% of all **girls between 6 and 11** in the camp were reportedly going to school inside the camp. 2% were reportedly attending school outside the camp. Main barriers to education reported by HHs where at least one girl aged 6 to 11 did not attend school:

1. Child did not want to attend **58%**
2. Education was not considered important **50%**
3. Lack of learning space/ facility in the camp **17%**

20% of all **girls between 12 and 17** in the camp were reportedly going to school inside the camp. 3% were reportedly attending school outside the camp. Main barriers to education reported by HHs where at least one girl aged 12 to 17 did not attend school:

1. Children had to work **63%**
2. No education for children of a certain age **41%**
3. Education was not considered important **22%**

68% of all **boys between 6 and 11** in the camp were reportedly going to school inside the camp. 2% were reportedly attending school outside the camp. Main barriers to education reported by HHs where at least one boy aged 6 to 11 did not attend school:

1. Education was not considered important **47%**
2. Child did not want to attend **40%**
3. Disability (lack of access/inclusion) **13%**

46% of all **boys between 12 and 17** in the camp were reportedly going to school inside the camp. 6% were reportedly attending school outside the camp. Main barriers to education reported by HHs where at least one boy aged 12 to 17 did not attend school:

1. Children had to work **47%**
2. Education was not considered important **42%**
3. Child did not want to attend **37%**

EARLY CHILDHOOD DEVELOPMENT (3-5 YEARS OLD)

Household Data

2% of 3-5 year old children in the HHs reportedly received early childhood **education**

Most commonly reported barriers to early childhood education among HHs where at least one 3-5 year old did not attend (HHs could select as many options as applicable. The sum of the percentages will not be equal to 100%):

1. No education for children of a certain age **75%**
2. Lack of learning space/ facility in the camp **12%**
3. Child did not want to attend **10%**

EDUCATIONAL FACILITIES

Key Informant Data

According to KIs, there was 1 in-person operational educational facility available in the camp offering a self-learning program to children aged 6 to 14. Certification was not reported to be available at this facility.

METHODOLOGY OVERVIEW

The data collection process for this camp profiling employed three distinct methodologies: KI interviews, HH interviews, an in-field mapping data collection. KI interviews, conducted with camp managers for each camp, provided in-depth insights and context into camp management, services, and infrastructure. HH interviews were carried out using a random spatial sampling method. Sample size was determined to achieve a 95% confidence interval and 10% margin of error. Sampling was based on population figures supplied by camp management. Given the sampling approach and sample size, data presented in this factsheet can be considered representative. The in-field mapping data collection technique involved a physical visit to camp facilities, documenting precise locations using KoBo, and assessing available services. Data collected through in-field mapping was compared with KI interviews for a holistic understanding of camp infrastructure and services. All Camps and Displacement products remain accessible on the REACH Resource Centre.

ENDNOTES

[6]Vaccination strategies are tailored to address the vulnerabilities of specific age groups. Children under 5 years old are particularly susceptible to polio, with most cases occurring within this age range. Immunizing children under 5 becomes imperative as it provides protection during their most vulnerable phase, effectively curbing transmission and establishing herd immunity against polio outbreaks. [Reference: World Health Organization (WHO), UNICEF, and Rotary International: https://www.unicef.org/partnerships/rotary]

[7]Infants and young children are especially at risk of diseases targeted by the DTP vaccine. Diseases like pertussis can have severe consequences for infants, making vaccination crucial before potential exposure. Vaccinating children under 2 mitigates disease outbreaks and fosters herd immunity. Conversely, the MMR2 vaccine is strategically administered later, typically around 4 to 6 years old, factoring in crucial developmental considerations. Administering certain vaccines, like the MMR vaccine, to very young children may not yield optimal immunity due to developing immune systems and maternal antibodies interference. The vaccine's timing, carefully orchestrated to minimize visits and optimize schedules, ensures its effectiveness. These tailored vaccination timelines are anchored in scientific rationale, enhancing the overall impact of immunization efforts. https://www.who.int/news-room/fact-sheets/detail/immunization-coverage

[8]In camp health assessments, medical facilities are typically established, enabling regular communication and the submission of comprehensive medical reports. When a camp lacks medical facilities and an IDP requires external treatment, the IDP provides medical documentation upon their return, explaining the need for their absence. This practice ensures effective health monitoring and reporting, even in camps without on-site medical services.

ABOUT REACH

REACH Initiative facilitates the development of information tools and products that enhance the capacity of aid actors to make evidence-based decisions in emergency, recovery and development contexts. The methodologies used by REACH include primary data collection and in-depth analysis, and all activities are conducted through inter-agency aid coordination mechanisms. REACH is a joint initiative of IMPACT Initiatives, ACTED and the United Nations Institute for Training and Research - Operational Satellite Applications Programme (UNITAR-UNOSAT).
