UKRAINE: ECONOMIC PARTICIPATION ASSESSMENT (EPA) Assessment Area 1: Severodonetsk and surroundings, Luhansk Oblast (GCA), December 2021 Canada

CONTEXT

In its 8th year, the conflict in eastern Ukraine continues to impact labour market dynamics in the region. As highlighted in REACH's Capacity Vulnerability Assessments (CVAs) conducted in 2018, the 'Line of contact' has impeded access to employment in large cities currently in the non-government-controlled areas (NGCA). As a result, smaller regional centres in the government-controlled areas (GCA) have an increased role as employment hubs for communities in proximity to the 'Line of contact'. Further to conflict-related interruptions to employment, the COVID-19 outbreak has led to significant reductions in economic activity and employment rates across Ukraine.1

In this context, under the Canadian aid-funded Securing Women's Economic Empowerment in Donbass (SEED)² and in partnership with ACTED, IMPACT Initiatives conducted the Economic Participation Assessment (EPA) to inform partners in their activities aimed at assisting marginalised job seekers (such as women, youth and pre-pensioners) in finding sustained employment and increasing the information available on these topics.³ The EPA covers 5 geographic or assessment areas (AAs) divided as follows: AA 1: Severodonetsk and surroundings (assessment coverage map to the right), AA 2: East Luhansk, AA 3: Bakhmut and surroundings, AA 4: Kramatorsk corridor, AA 5: Mariupol and surroundings.

METHODOLOGY

This factsheet is built on the findings from AA 1 and focused on: a) Severodonetsk city (employment hub), b) Popasna city (employment hub), c) Lysychansk city (employment hub), d) Lysychanska, Severodonetska, Popasnianska, Hirska hromadas (employment network periphery). It offers an overview of demography and socioeconomic conditions of households living in the assessment area. The factsheet includes a summarised gender-analysis of labour market dynamics, barriers to employment, intensions to change or search for a new job, experience of using services of state employment centres. The indicators aim at offering an understanding of the impact of the COVID-19 outbreak on the local economic conditions.

Findings draw from the household survey and compare results for Severodonetsk and surrounds against the total for all five assessment areas (Overall). The survey was conducted between 21 May and 14 June 2021. It comprises a total of 3,026 households (including 806 in AA 1) sampled by using stratified simple random sampling where eligible households were selected from each stratum to achieve 95% confidence level and 7% margin of error. In order to be considered eligible. households had to have at least one member of working age (15-70 years old). Data were collected via Computer-Assisted Telephone Interviews (CATI). Findings are representative with a 95% confidence level and a 5% margin of error for each AA. The full activity terms of reference can be accessed here.

DEMOGRAPHICS

- Assessed households 806 Household members represented
- 46% of households have at least one child under the age of 15 (n= 375)

2.305

- 23% of households have at least one member over the age of 60 (n= 188)
- 7% of households members are internally displaced (n= 102)

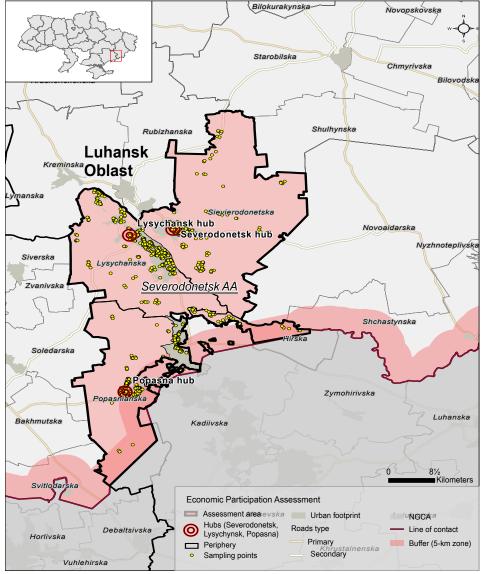

6%

of household members aged 15-70 reportedly have a disability (n= 93)

1. United Nations Ukraine. Assessment of the socio-economic impact of COVID-19 in Ukraine (link), December 2020

2. Securing Women's Economic Empowerment in Donbass (SEED) is a 36-months project funded by Global Affairs Canada and implemented by ACTED, IMPACT Initiatives and 5 civil society organisations in Ukraine.

3. Services provided by employment centers include, but are not limited to, workforce engagement, current labor market dynamics and emerging sectors within the areas of intervention

4. Given the focus not only on household-level information but also on the individual experiences of household (HH) members, a single household representative aged 18 years old or older was selected on a voluntary basis to report as a proxy for other household members.

5. Findings presented in this factsheet may not include answers such as "Do not know" or "Decline to answer" and total percentages may therefore not sum to 100%.

6. Figures between brackets show the subset size corresponding to the number of household members concerned by the question.

This question allowed multiple answers.
 The concerned stratum (or assessed area) has registered the highest value for this indicator amongst all strata assessed in the five AAs (or amongst the five assessed areas).

9. This included jobs of 1 hour or more, worked for additional income.

10. Monthly wage between April-June 2021, averaged as Q2 2021, corresponds to 12,137 UAH in Ukraine and 14,444 UAH in Luhansk Oblast (GCA), from State Statistics Service of Ukraine. 11. Findings for "Overall" refer to all five assessment areas throughout.

12. This guestion was not asked to self-employed household members.

13. The concept of informal employment defines as "all remunerative work" (i.e. both self-employment and wage employment) that is not registered, regulated or protected by existing legal or regulatory frameworks, as well as non-remunerative work undertaken in an income-producing enterprise, from International Labour Organization.
