Camp 5 Ukhiya, Cox's Bazar, Bangladesh

July 2018 and January 2019 comparison

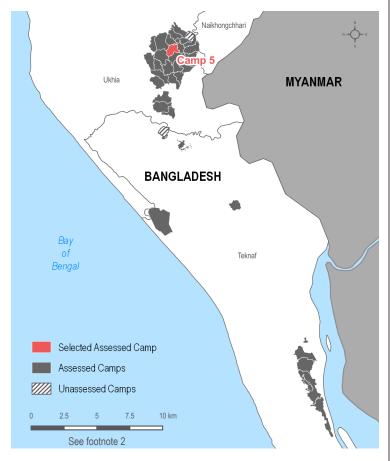

Background and Methodology

An estimated 738,000 Rohingya refugees have fled violence in Myanmar's Rakhine state since August 25, 20171. Most of the refugees rely on humanitarian assistance, having left with few possessions and exhausted their financial resources on the journey. The cyclone and monsoon seasons, stretching from May to October, further threatened the living conditions of the vast majority of refugees who are living in makeshift shelters and settlements highly vulnerable to floods and landsides.

To understand the evolving priority needs of the refugees, and to understand change over time, this Multi-Sector Needs Assessment (MSNA), coordinated by the United Nations High Commissioner for Refugees (UNHCR) and with technical support from REACH, was conducted in 33 refugee sites using a household survey methodology. It is a follow up assessment to the baseline MSNA conducted in July 2018.

Results of this MSNA are generalizable to the camp level with 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 5 where 97 households were surveyed between 8 and 26 January 2019. Support for questionnaire translation and enumerator language training was provided by Translators Without Borders.

January 2019 data is presented in red, and July 2018 data is presented in beige.

Camp population:

Families¹

6.044

Individuals¹

25.117

i Demographics³

Average age of 32.2 respondent

39% of respondents were female

Average 4.9 household size

54% of refugees are under 18

Female

Composition of surveyed households

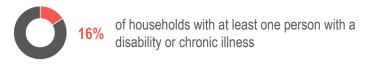

- 1. As defined by UNHCR in the population data and key demographical indicators (31 December dataset)
- 2. The boundaries and names used on this map do not imply official endorsement or acceptance by the United Nations
- 3. January 2019 data only

^{4.} Respondents could select multiple options

^{5.} Three most common safety concerns for boys and girls are shown

^{6.} These results are based on the respondent's subjective perception of risks in the camp, and not the actual number of security incidents

^{7.} In this assessment hazardous labour was defined as: working with heavy machinery or lifting heavy objects, exposure to harmful chemicals, exposure to extreme heat (eg. furnace, bakery), working more than 40 hours per week, working at night (between 8 pm and 6 am), and using sharp objects

^{8.} Respondents were asked to report information for each child in their household. This indicator shows the proportion of all individual children reported

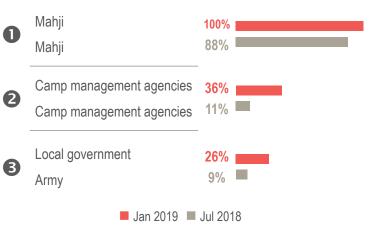

^{9.} Respondents were asked to report information for each woman in their household. This indicator shows the proportion of all individual women reported

^{10.} Three most common areas where men, women, boys and girls do not feel safe are shown

Camp 5

July 2018 and January 2019 comparison

% of households reporting first port of call for assistance in dealing with safety or security issues 11,12

Jan 2019

of households reporting the presence of groups or committees in their area working to protect their rights and protect them from harm

Jul 2018

% of households reporting different relationships with refugee neighbours in the same block

% of households reporting different relationships with Bangladeshi host community

Jan 2019

96%

of households reporting not enough light at night for household members to safely access latrines in their area of the camp

Health

Jan 2019

of households with children under 5 reporting all children under 5 having an immunization card¹³

Jul 2018

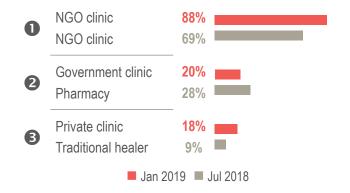

of households with children under 5 reporting all children under 5 sleeping under a mosquito net the night prior to data collection¹³

100%

% of households with children under 5 reporting receiving a breast milk substitute or baby bottles through donation in the 30 days prior to data collection¹¹

Jan 2019		Jul 2018
2%	Breast milk substitute	0%
0%	Baby bottles	0%

% of households reporting seeking treatment for an individual with a serious illness in the 30 days prior to data collection, by source of treatment^{11,14}

- 11. Respondents could select multiple options
- 12. Three most common ports of call for assistance are shown
- 13. Respondents were asked to report information for each child in their household. This indicator shows the proportion of all individual children reported
- 14. Three most common sources of treatment are shown

Camp 5

July 2018 and January 2019 comparison

% of households reporting challenges in accessing NGO run clinics since arriving in the camp^{15,16}

Jan 2019				Jul 2018
42%	No challenge	0	No challenge	44%
36%	Treatment unavailable	2	Crowded	24%
34%	Supplies unavailable	3	Treatment unavailable	18%
25%	Crowded	4	Clinic too far	18%
13%	Expensive treatment	6	Supplies unavailable	18%

Food Security

Jan 2019

Of households reporting possession of a ration card

Jul 2018

100%

% of households reporting receiving food assistance in the 30 days prior to data collection, by source¹⁵
