Akobo town is located in the eastern side of Akobo County, Jonglei State, close to the land and river border crossings with Ethiopia. Akobo is a key point of trade and transit between South Sudan and Ethiopia. Since the beginning of the crisis in 2013, this route has been used by South Sudanese heading to or coming back from refugee camps in Ethiopia. Since May 2015, REACH has been recording arrivals and departures of South Sudanese households (HHs) in four locations, Gadrang Road, Koatkoangthor Road, Tundol Port and Market Port, on a daily basis.

In order to provide an indication of wider trends, data is collected on the volume of movement, as well as the motivations and intentions of those travelling. REACH teams interviewed arrivals and departures at the household (HH) level. For movements larger than three HHs, a short alternative survey is used to assess HH and individual numbers by speaking to the Transport Focal Point (TFP), such as the driver or transport authority.¹ Due to insecurity and other issues, data is not always collected on a daily basis. To correct for this inconsistency, data presented for general movement trends across months represents an average based on the number of days of data collection each month. The data presented here is not representative, nor does it capture all movements in and out of Akobo. Rather, it is indicative of movement trends for the assessed population.²

The following findings are based on primary data collected between the 1st and 30th July 2021.

GENERAL MOVEMENT TRENDS

The findings in this factsheet are based on data from the REACH Port and Road Monitoring (PRM) data collection and the TFP survey, the latter of which captures larger movements between Akobo and Ethiopia.¹

TYPE OF MOVEMENT

Total monthly number of HHs and individuals recorded by PRM and TFP data collection tools in July 2021: HHs Individuals % of HHs

11110	mannaulo	/0 01 11110	
34	211	39%	
45	248	52%	
8	31	9%

Inbound destinations

Outbound destinations

Proportion of inbound HHs (left) and outbound HHs (right) who self-reported having refugee status in another country:3

During the data collection period, in addition to interviewing 65 HHs (363 individuals) travelling by foot or in small vehicles and boats (PRM data collection), REACH also used the TFP tool to estimate the number of HHs travelling on larger boats. In July, one larger inbound transport was Primary reported pull factors for inbound HHs, April 2021 to July 2021

1. The TFP tool asks the driver (or another focal point) to give details of the number of individuals and number of households travelling. This methodology is used if the number of households travelling exceeds 3 households and therefore cannot all be interviewed. For more details, please access the Port and Road Monitoring Terms of Reference here. 2. While internal movement within South Sudan was also recorded in Akobo over the data collection period, this factsheet covers crossborder movement between South Sudan and Ethiopia, and vice versa, only.

14% 29% 20% 10% Distan Presence of work opportunities 3. 'Security Concerns During Travel' has been replaced with 'Self-reported Refugee' data for July as no inbound movements were captured by the TFP tool, and reporting of security concerns amongst outbound transport focal points was low.

. Respondents may select multiple vulnerabilities

Dartial HIs are those where not all members of the self-identified family unit were reportedly travelling. Please note, family units in South Sudan often extend beyond the nuclear family. Reported presence of services or opportunities is indicative of respondents' perception and does not necessarily reflect availability.
