

# AREA BASED ASSESSMENT

Baashiqra Town, Ninewa Governorate  
May 2018

## DEMOGRAPHICS

In order to inform recovery and stabilization programming, REACH Initiative launched an Area Based Assessment (ABA) in Baashiqra town. In focusing assessments at the settlement level, the ABA seeks to provide a tailored and actionable profile of the assessed area, with a specific focus on demographics, household-level needs, and access to critical public services. As a component of this assessment, REACH conducted 494 household interviews as a representative sample of the town, resulting in a 97% confidence level and 5% margin of error. The sample was drawn using a grid-based, point sampling technique, where random GPS points were drawn across all residential areas of the town. All data collection was conducted by REACH enumerators between 18-30 January, 2018.

### Composition of assessed households by gender and age group

### Marital status of head of household

### Average age of head of household, by gender of head of household

### Average household size, by gender of head of household

### Proportion of households with a female head of household

### Proportion of households with at least one orphaned child

### Proportion of households with separated or unaccompanied minors

### Proportion of households with at least one widow\*

\* These results include widowed head of households
