Structure

Elock Boundary

Proportion of facilities, by number of cubicles This graph reflects the overall number of structures on the map, categorized by single cubicles, blocks with 2 to 3 cubicles, blocks with 4 to 5 cubicles, and blocks with 6 or more

Proportion of cubicles, by gender

This graph reflects the proportion of cubicles clearly labelled as a female-only or cubicles. A block is here defined as a structure with more than one cubicle, not necessarily of the same type of infrastructure. As an example: a structure with two latrine cubicles will be classified as a block here, as well as a structure with one

Proportion of facilities, by type

Facilities have been classified as emergency, semi-durable or durable according to a methodology developed by the WASH Sector's Sanitation Technical Working Group (TWG). This approach assesses components of facility superstructures only, with classifications determined by the combination of materials used to build walls and pillars. Due to constraints on the length of the assessment tool, information on facility substructures was not included in this determination. For the full methodology overview, please see the 'Read Me' section in the Sanitation Coding database.

the users of this facility. The classification of a cubicle into female-only or male-only

does not automatically imply exclusive use for only the specified user groups in

Proportion of cubicles, by gender male-only, and the proportion of cubicles that are not gender segregated. This indicator is based on visual observation of enumerators, and not on consultation of

practice.
