Libya Joint Market Monitoring Initiative (JMMI)

1-8 June 2018

Libya Cash & Markets Working Group

INTRODUCTION

In an effort to inform cash-based interventions and better understand market dynamics in Libya, the Joint Market Monitoring Initiative (JMMI) was created by the Libya Cash & Markets Working Group (CMWG) in June 2017. The initiative is guided by the CMWG Markets Taskforce, led by REACH and supported by the CMWG members. It is funded by OFDA and UNHCR.

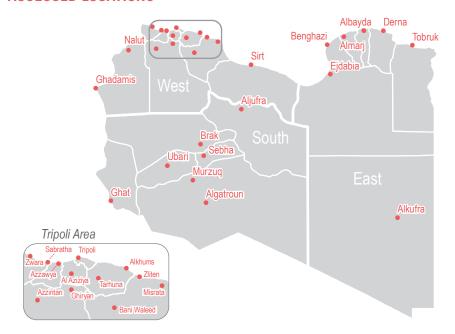

Markets in key urban areas across Libya are assessed on a monthly basis. In each location, field teams record prices and availability of basic food and non-food items (NFI) sold in local shops and markets.

This factsheet presents an overview of price ranges and medians for key food items and NFIs in the assessed areas, as well as the costs associated with key elements of the Minimum Expenditure Basket (MEB).

METHODOLOGY

- Field staff familiar with the local market conditions identified shops representative of the general price level in their respective locations.
- At least four prices per assessed item were collected within each location. In line with the purpose of the JMMI, only the price of the cheapest available brand was recorded for each item.
- Enumerators were trained on methodology and tools by REACH. Data collection was conducted through the KoBoCollect mobile application.
- Following data collection, REACH compiled and cleaned all partner data, normalising prices, crosschecking outliers and calculating the median cost of an MEB in each assessed market.
- More details are available in the Methodology section of the Appendix.

ASSESSED LOCATIONS

KEY FINDINGS

- Due to heavy clashes in Derna, supply chains for key goods were disrupted. Kls reported that many residents had uncertain access to food², and eleven monitored items from the MEB were reported absent from the markets, with only two bakeries continuing to function. Due to these shortages, it was not possible in June to calculate the cost of an MEB in Derna.³
- Ongoing difficulties with the supply of subsidised flour to bakeries caused a rise in flour prices reaching +75% in Derna, and an increase in bread prices by 40.8% in Almarj, compared to May. According to KIs in Benghazi, bakeries that formerly sold bags of 6-7 pieces of bread for 1 LYD were now selling 4 pieces of bread for the same price. In Tripoli, many bakeries went on strike to demand that subsidised wheat flour be provided at earlier levels.
- Across Libya, due to inflation, the MEB reached a median cost of 817.99 LYD (+4.5%). In comparison with May, the greatest growth was in the east (+4.9%). Despite decreasing prices in the south (-1.1%), the median cost of the MEB remained higher than in the west and the east.
- Across all assessed locations, since February 2018, the west of Libya recorded the highest increases in price by +23.1% for food items and +9.7% for hygiene items. Food items accounted for 88.5% of the cost of the MEB's key elements, which increased by 5.0% in June compared to May.
- Shortages of subsidised LPG in official shops have led to a growing parallel market. The median price of LPG on the parallel market, 11.00 LYD per 11 kg, was almost three times higher than that observed in subsidised official shops (4.00 LYD), with some parallel-market traders charging as much as 85 LYD per 11 kg.

MINIMUM EXPENDITURE BASKET (MEB)

Key Elements: Food Items

Bread	38 kg	Tomatoes	12 kg
Rice	12.5 kg	Potatoes	14 kg
Pasta	11 kg	Onions	8 kg
Couscous	6.5 kg	Peppers	5 kg
Beans	7 kg	Tomato paste	7 kg
Chicken	9 kg	Black tea	2 kg
Tuna	4.5 kg	Vegetable oil	6 L
Eggs	4.5 kg	Sugar	2 kg
Milk	10 L	Salt	1 kg

Key Elements: Non-Food Items

Bathing soap 1.5 kg (10 150-g bars) Toothpaste 0.6 kg (6 100-g tubes)

Laundry detergent 1.5 L Dishwashing liquid 1.5 L

Sanitary pads 4 packs of 10 Cooking fuel (LPG) 22 kg (2 11-kg refills)

Optional Elements³

Water (drinking and

domestic use) 2,790 L Median rent for 3-rm flat 1 month

Float⁴ 20% of key elements

The Minimum Expenditure Basket (MEB) represents the minimum culturally adjusted group of items required to support a six-person Libyan household for one month. The cost of the MEB can be used as a proxy for the financial burdens facing households in different locations. The MEB's contents were defined by the CMWG in consultation with relevant sector leads.

Only the MEB's key elements (food and non-food items) were incorporated into the calculations in this factsheet.

How to read a boxplot

The 'location median' is calculated by first finding the median price of a given item in each assessed location, then taking the median of the resulting set of median prices.

What is the CMWG?

The Libya Cash & Markets Working Group (CMWG), established in August 2016, is a community of humanitarian actors that support and coordinate cashbased interventions in Libya. The CMWG, based jointly in Tripoli and Tunis, is currently led by UNHCR and co-led by Mercy Corps.

Methodology (cont. from page 1)

The methodology for the JMMI is based on purposive sampling. In each assessed market, at least four prices per item need to be collected from different shops to ensure the quality and consistency of collected data. Partner field teams, in coordination with the CMWG, identify shops to assess based on the following criteria:

1. Shops need to be large enough to sell all or most

PAYMENT MODALITIES ACCEPTED IN ASSESSED SHOPS (% of shops) Cash 92% Bank transfer 98% Store credit 98% Credit/debit card 98% Certified cheque 100% Mobile money 100% Gold 100% Barter Online payments 100% Other modalities ■ Modality accepted ■ Modality not accepted MARK-UPS FOR ALTERNATIVE MODALITIES 30-40% E-cards (credit, debit) Certified cheques 10-45% Mobile money N/A

assessed items.

- 2. Prices in these shops need to be good indicators of the general price levels in the assessed area.
- Shops should be located in different areas within the assessed city or baladiya.

In locations where it is not possible to identify four large markets that fulfil criterion (1), smaller shops, such as grocery shops, vegetable vendors, butchers and bakeries, are added to the shop list, as long as they fit criteria (2) and (3), in order to guarantee at least four prices per item of interest. Each month, price data is collected from the same shops whenever possible to ensure comparability across months.

The CMWG primarily targets urban areas throughout Libya, aiming to ensure coverage of markets that serve as commercial hubs for surrounding regions.

Data is collected via the KoBo mobile data collection application. The CMWG maintains a joint KoBo account for the JMMI. The data collection tool is published alongside the dataset every month and disseminated to the humanitarian community.

Analyses

The median prices reported in this factsheet are 'location medians', designed to minimise the effects of outliers and differing amounts of data among assessed locations. First, the median prices of all assessed items are calculated within each assessed location (city or mahalla); then, REACH calculates the median of this list of medians. All boxplots, as well as MEB and price index calculations, are created using this method.

The cost of the MEB is calculated by multiplying the median price of each item in the MEB's 'Key Elements' section by the quantity listed in the table on page 2. In cases where no median price is available for an item in a particular location, the median price for that item across the region (west, east or south) is substituted.

As trends in the cost of the MEB cannot yet be analysed, REACH continues to track month-on-month changes in its former price indices. The Food Price Index is calculated by adding the median prices of one unit of each monitored food item (excluding lamb meat due to its high price); the NFI Price Index, by adding the median prices of one unit of each monitored hygiene item (excluding laundry detergent and baby diapers due to their high prices). In cases where no median price is available for an item in a particular location, the median price for that item across the region (west, east or south) is substituted.

Challenges and limitations

- Price data is only indicative for the time frame within which it was collected. Prices may vary between data collection rounds.
- The data is only indicative of the general price levels in the assessed cities – representativeness on the

- mantika (district) level cannot be claimed. Even on the city level, price data must be interpreted with caution, particularly in larger cities with substantial variation in neighbourhoods' socio-economic levels.
- The JMMI data collection tool requests the cheapest available brand of each item to be recorded, but does not require a specific brand, as availability varies. Therefore, price comparisons across regions may be based on slightly varying products.
- The JMMI does not intend to measure general inflation levels on Libyan markets. As per JMMI methodology, only the cheapest available price per item is collected, meaning that changes in middlemarket and upmarket goods are not captured.

Endnotes

- ¹ Official rate: Central Bank of Libya (1 June 2018), retrieved from www.cbl.gov.ly. Parallel market rates: Ewan Libya (1 June 2018), retrieved from www.ewanlibya.ly. The rates from 1 May and 1 June 2018 were used for the calculation of the monthly changes.
- ² 1 June 2018, *Derna Rapid Situation Overview* retrieved from: http://bit.ly/2LdgVeo.
- ³ Libya Observer (30 June 2018), *Flour mill pledges to halt bread crisis if bank credits are provided*, retrieved from www. libyaobserver.ly/inbrief/flour-mill-pledges-halt-bread-crisis-if-bank-credits-are-provided
- ⁴ The 'Optional Elements' section of the MEB includes basic expenditures that are incurred by some, but not all, Libyan households, as well as expenditures that extend beyond basic survival and dignity needs. They are not included in the JMMI's MEB calculations.
- ⁵ The 20% float is designed to cover regular expenditures that do not fall neatly into any other category. This includes expenses on healthcare, medicine, education, utilities, transportation and communications.
- ⁶ Due to the unique conflict dynamics in Derna, it was not possible to impute prices for missing items.
- ⁷ Prices were normalized by setting October 2017 as the baseline and dividing each month's price by the price in October.
