# Joint Multi-Cluster Needs Assessment: Belet Weyne District Profile

Hiraan Region, Somalia

August 2017

#### **Background**

The ongoing drought has contributed to a rapid deterioration of the humanitarian context in Somalia, with a predicted high risk of famine in 2017. In support of the humanitarian planning response, the Clusters and the Assessment Working Group developed the Joint Multi-Cluster Needs Assessment (JMCNA) with the support of REACH in order to assess needs and access to basic services in Somalia.

The Somalia population was sampled for statistical representativeness at the district level with a confidence level of 90% and a margin of error of +/- 10%, employing a cluster sampling approach using the Population Proportional to Size method with replacement. Data collection was conducted by AAHI, ACF, ACTED, ADESO, Aid Vision, CARE, DBG, DRC, Galmudug MoH, HINNA, INTERSOS, IOM, NRC, PAH, REACH, SADO, SCI, SHARDO and SI.

This factsheet presents an analysis of data collected in Belet Weyne District between 20 and 25 July 2017 as part of the JMCNA. In total, 121 households were surveyed across Belet Weyne District.

## **†**√**†** Demographics

Household composition, by gender and age:

of households reported that they are not from the community they currently reside in.

## Food Security

Food Consumption Scores (FCS) of households:
