Humanitarian Situation Monitoring (HSM) Pilot

Key District Findings

CONTEXT

Endemic poverty and conflict have converged with recent changes in governance, economic shock and natural disasters to generate disparate needs and vulnerabilities within Afghanistan.

The rapidity with which humanitarian needs are evolving calls for analysis at regular intervals to support geographical and sectoral prioritizations within the humanitarian response in Afghanistan. Humanitarian Situation Monitoring (HSM) seeks to inform the prioritization of emergency needs by monitoring the evolution of vulnerabilities, coping strategies, gaps in basic services and needs of assessed districts. HSM also seeks to complement the annual household-level Whole of Afghanistan Assessment (WoAA) by filling in information gaps on a regular basis.

METHODOLOGY

The HSM methodology uses settlements as the unit of analysis. A structured survey tool was used to interview key informants (KIs) - i.e. government workers, religious leaders, teachers, doctors or other community members with significant knowledge of the settlement - about the humanitarian situation in their settlement. A sampling frame covering all 265 districts in all 31 provinces of Afghanistan was used with a minimum coverage of 10% of total settlements in each district. To achieve geographical spread across each district, at least three key informant interviews (KIIs) in a number proportionate to the number of settlements, were conducted in each Basic Service Unit (BSU). To determine a BSU - defined as an economic/geographic service unit which relies on the same services (i.e. healthcare clinics and schools) and common public spaces (i.e. markets and roads) - participatory mapping of the settlements and services available was conducted prior to data collection. Data collection occurred between 22 December 2021 - 11 January 2022. A total of 6,975 KIIs are included in the analysis - including 1,116 (16%) female KIIs and 628 interviews (9%) with persons self-identifying as a person with a disability when presented with the Washington Group Short Set (WGSS) definition of disability. For more information, refer to the formatted data and analysis.

The following is an **indicative** analysis - i.e. **not statistically representative**.

LIMITATIONS

- Enumerators purposively selected KIs via snowballing. Convenience sampling can favor the most externally accessible KIs (i.e. men, persons without a disability) which can introduce a bias in the data and subsequent analysis. To mitigate this, enumerators sought to interview female KIs and persons with a disability where possible with the principles of due no harm in mind.
- Enumerators purposefully selected settlements when there were 3 or more settlements within a BSU to obtain a minimum coverage of 10% of total settlements in each district. This can favor the most externally accessible settlements within BSUs which can then introduce a bias in the data and subsequent analysis.
- The HSM methodology relies on KIIs - i.e. it is indicative of key informant perspectives in the assessed settlements and may not reflect the experiences of individual households within the assessed settlements.
- The number of KIs interviewed in some districts is low, i.e less than 10 KIs (see Annex 1 for a breakdown of the sample size at district level).

NAVIGATION

The following maps and tables from the pilot of the HSM assessment highlight key indicators from the survey that help to contextualise the economic and livelihoods situation in Afghanistan and to inform understanding of various sectoral needs. This document is organised into district-level tables which are grouped by sector, showing the percentage of KIs reporting key indicators in each district. Food Security, Health, Nutrition and WASH indicator tables are shown on pages 2 to 8, Protection and ES/NFI indicators are shown on pages 9 to 15, and Education, Humanitarian Assistance, and Event Shocks indicators are shown on pages 16 to 22. Each table showing the sector indicator groups listed is further organised alphabetically by region, then alphabetically by province and district within each region. The Annex table on page 22 to 24 shows the distrcit names and the sample size.

[1] Using the habitual mode of transportation (in hours) by most households in the assessed settlement.
[2] Sufficient access to water includes having enough water for drinking, cooking, personal hygiene (washing and bathing), handwashing and other domestic purposes.
[3] Inadequate Water Sources includes spring water (unprotected) and surface water (stream/river/irrigation water).
[4] Self-defined by Key Informant.

Daymirdad	94%	0%	94%	0%	38%	50%	38%	6%	0%	0%	0%	100%
Jaghatu (Wardak)	60%	7%	60%	13%	47%	0%	7%	0%	0%	0%	0%	93%

[5] Protection incidents include: Attacks or harassment, Maiming or killing, Explosive hazards (mines, ERW, PPIEDs), Abduction, recruited into armed groups or detention, Abuse or exploitation, Movement restrictions (not Covid-19 related), Violent destruction of property or farmland, and Eviction from home. KIs were asked if any man, woman, girl, or boy in the assessed settlement experienced any of these incidents in the three months prior to data collection.

[6] Child labor: KIs were asked if they were aware of any child (under 16 years) working outside the home in the assessed settlement.

[7] Inadequate shelters include emergency shelters, collective centers not intended for living, open space, makeshift, unfinished shelter, or transitional shelter. KI was asked what was the type of shelter that most people in the assessed settlement live in.

[8] Insecure Tenure includes Safayee notebook, verbal rental agreement or none (no tenure agreement at all). KI was asked what type of tenure agreement do most people in the assessed settlement have.

[9] Inadequate heating sources include animal dung or waste (paper, plastic, carton board, etc.), bushes, or local wood, or no source. KI was asked what type of heating source do most people in the assessed settlement rely on.

About REACH:

REACH Initiative facilitates the development of information tools and products that enhance the capacity of aid actors to make evidence-based decisions in emergency, recovery and development contexts. The methodologies used by REACH include primary data collection and in-depth analysis, and all activities are conducted through inter-agency aid coordination mechanisms. REACH is a joint initiative of IMPACT Initiatives, ACTED and the United Nations Institute for Training and Research - Operational Satellite Applications Programme (UNITAR-UNOSAT).
