## Assessment of Hard-to-Reach Areas in South Sudan

South Sudan Displacement Crisis

August 2018

### Overview

The continuation of conflict since December 2013 has created a complex humanitarian crisis in the country, restricting humanitarian access and hindering the flow of information required by aid partners to deliver humanitarian assistance to populations in need. To address information gaps facing the humanitarian response in South Sudan, REACH employs its Area of Knowledge (AoK) methodology to collect relevant information in hard-to-reach areas to inform humanitarian planning and interventions outside formal settlement sites.

Using the AoK methodology, REACH remotely monitors needs and access to services in the Greater

Upper Nile, Greater Equatoria and Greater Bahr el Ghazal regions. AoK data is collected monthly and through multi-sector interviews with the following typology of Key Informants (KIs):

- KIs who are newly arrived internally displaced persons (IDPs) who have left a hard-to-reach settlement in the last month
- KIs who have had contact with someone living or have been in a hard-to-reach settlement in the last month (traders, migrants, family members, etc.)
- KIs who are remaining in hard-to-reach settlements, contacted through phone

Selected KIs are purposively sampled and have knowledge from within the last month about a specific settlement in South Sudan, with data collected at the settlement level. About half of settlements assessed have more than one KI reporting on the settlement. In these cases, data presented at the settlement level is the modal (most frequent) response for KIs reporting on that settlement. If there is an even number of 'yes/no' responses, data is aggregated as 'no consensus'.

All percentages presented in this factsheet, unless otherwise specified, represent the proportion of settlements assessed with that specific response.

The findings presented in this factsheet are indicative of the broad water, sanitation and hygiene (WASH) trends in assessed settlements in August 2018, and are not statistically generalisable.

### Assessment Coverage

**1,712** Key Informants interviewed

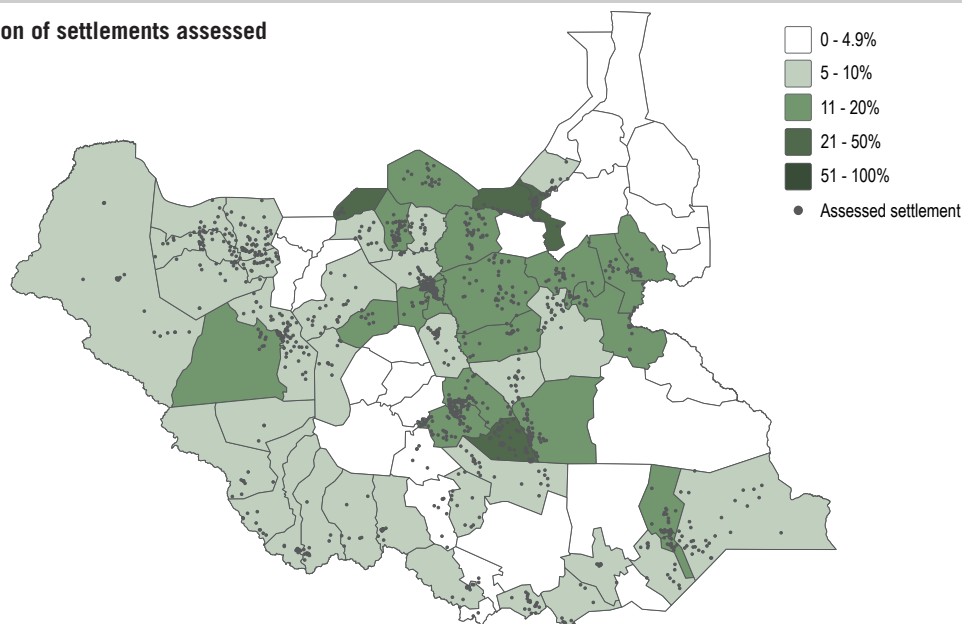

**1,293** Settlements assessed

**57** Counties assessed

**53** Counties with 5% or more coverage<sup>1</sup>

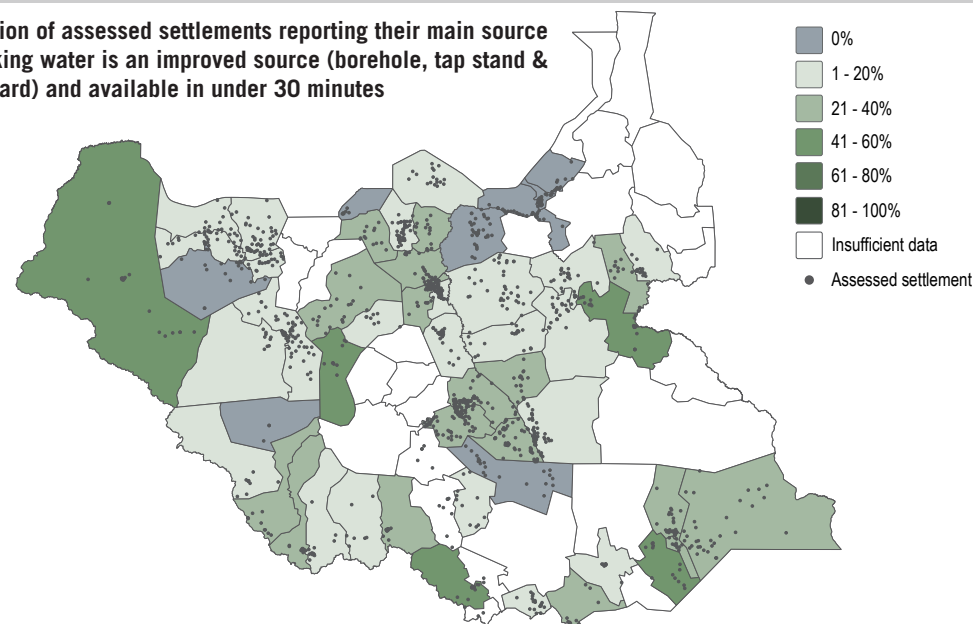

### Assessment coverage

#### Proportion of settlements assessed

### Improved Water Sources

#### Proportion of assessed settlements reporting their main source of drinking water is an improved source (borehole, tap stand & water-yard) and available in under 30 minutes

<sup>1</sup> Data is only represented for counties in which at least 5% of settlements have been assessed. The most recent OCHA Common Operational Dataset (COD) released in February 2016 has been used as the reference for settlement names and locations.

# South Sudan - Water, Sanitation and Hygiene (WASH)

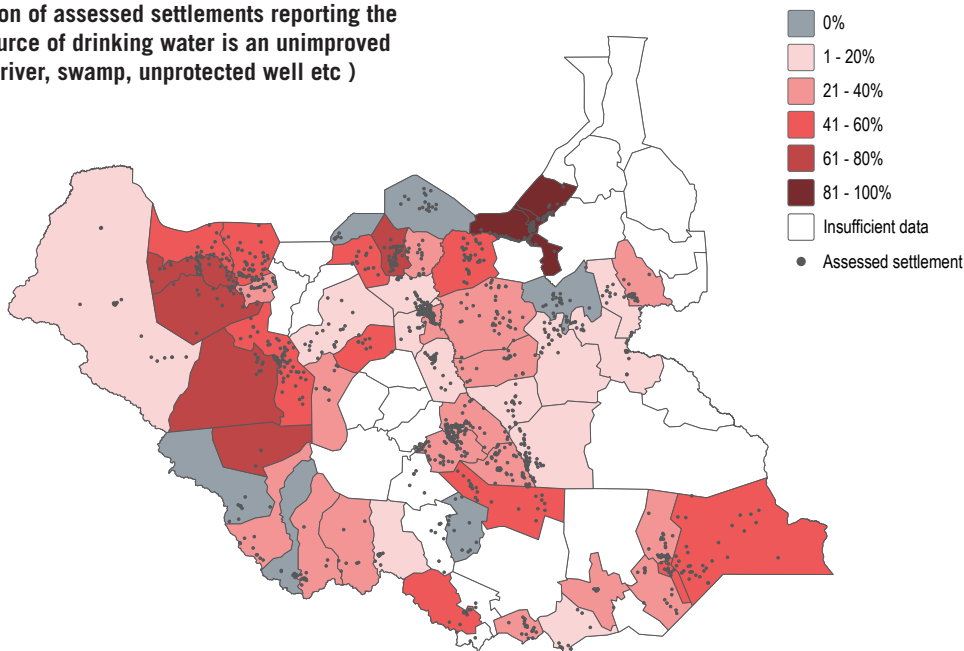

## Assessment of Hard-to-Reach Areas in South Sudan

South Sudan Displacement Crisis

August 2018

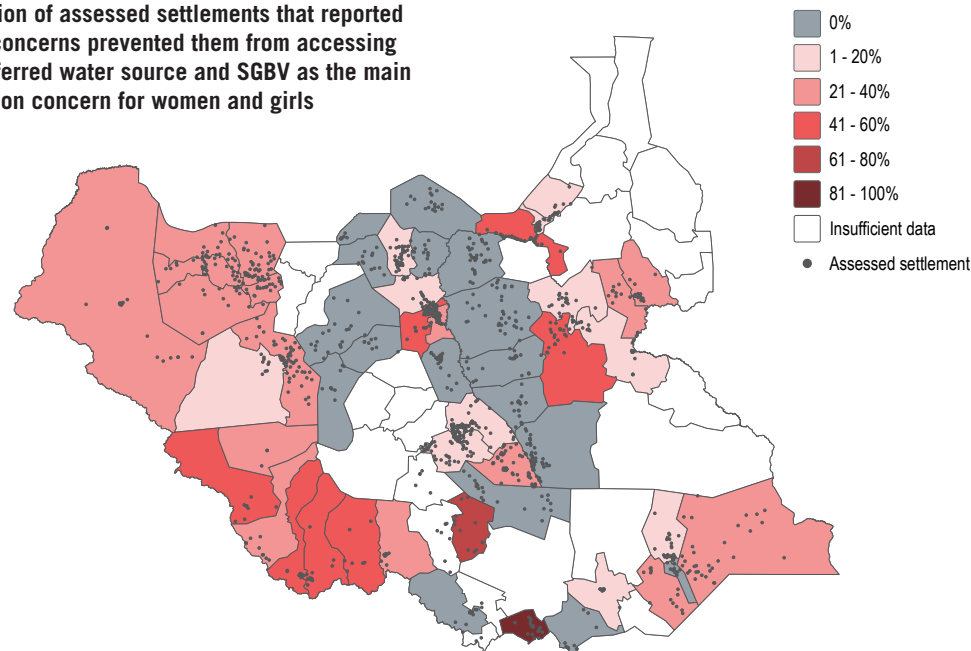

### Access to water

Proportion of assessed settlements reporting the main source of drinking water is an unimproved source (river, swamp, unprotected well etc )

### Safe water access and sexual and gender based violence (SGBV)

Proportion of assessed settlements that reported safety concerns prevented them from accessing the preferred water source and SGBV as the main protection concern for women and girls

### Drinking water source

Top five assessed counties reporting an unimproved source or surface water (river, swamp, unprotected well) as their main source of drinking water

Fashoda	100%	<div></div>
Panyikang	100%	<div></div>
Malakal	96%	<div></div>
Wau	76%	<div></div>
Aweil West	70%	<div></div>

### Water access time

Top five assessed counties reporting needing more than 30 minutes to access their preferred drinking water source

Abiemnhom	100%	<div></div>
Aweil Centre	100%	<div></div>
Terekeka	96%	<div></div>
Kajo-keji	94%	<div></div>
Pariang	94%	<div></div>

### Seasonal access to water

Top five assessed counties reporting access to the preferred drinking water source is only available in the wet season

Rubkona	44%	<div></div>
Fangak	41%	<div></div>
Ezo	33%	<div></div>
Guit	33%	<div></div>
Nagero	33%	<div></div>

### Protection and water access

Top five assessed counties reporting safety concerns preventing them from accessing their preferred water source

Kajo-keji	100%	<div></div>
Mundri East	73%	<div></div>
Ibba	71%	<div></div>
Nagero	67%	<div></div>
Mayendit	63%	<div></div>

# South Sudan - Water, Sanitation and Hygiene (WASH)

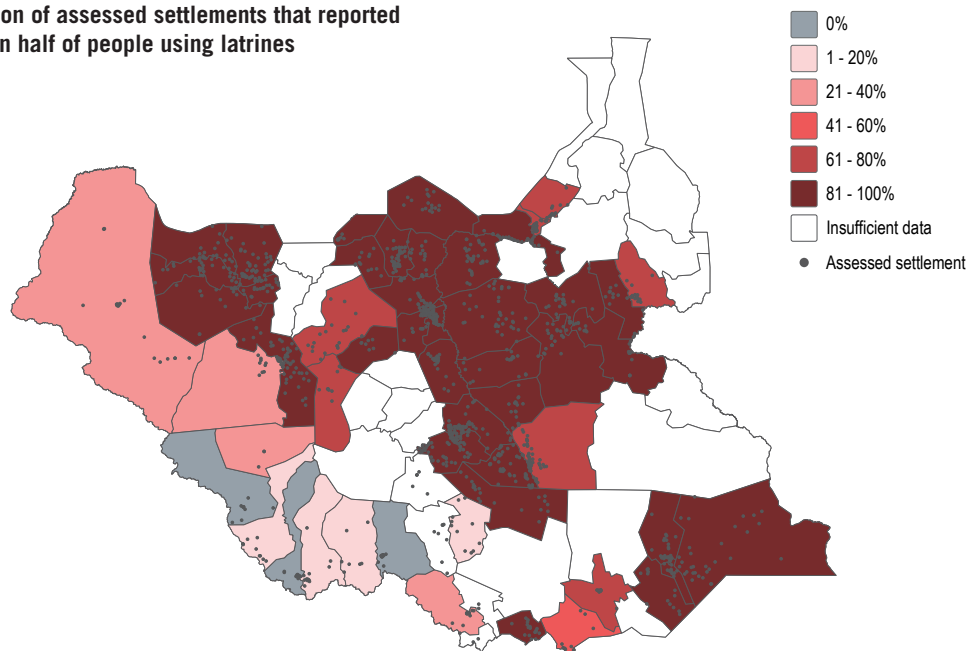

## Assessment of Hard-to-Reach Areas in South Sudan

South Sudan Displacement Crisis

August 2018

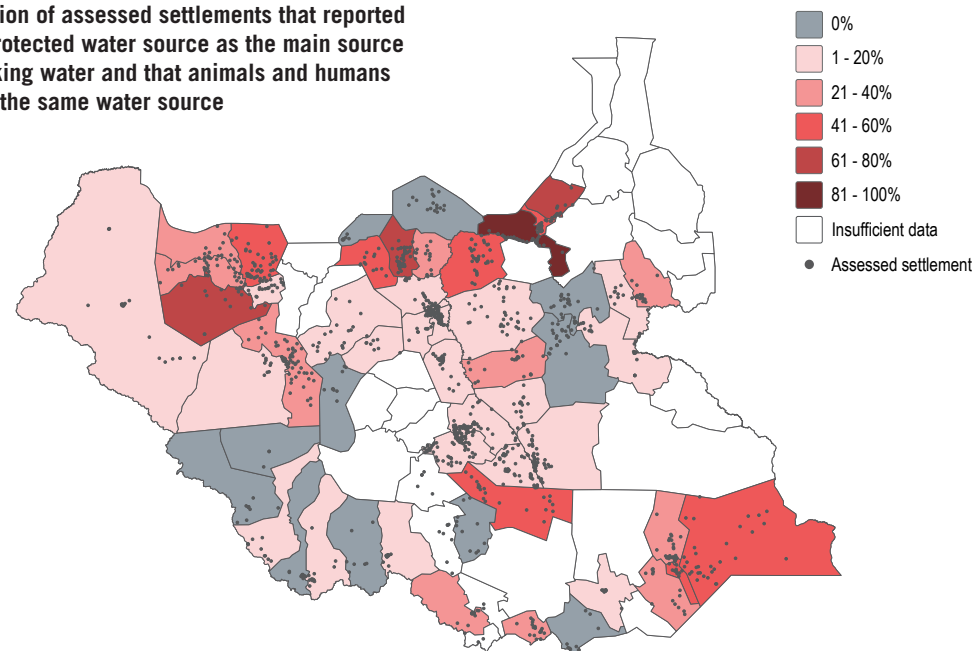

### Latrine use

Proportion of assessed settlements that reported less than half of people using latrines

### Humans and animals sharing water source

Proportion of assessed settlements that reported an unprotected water source as the main source of drinking water and that animals and humans shared the same water source

### Overcrowded latrines

Top five assessed counties reporting not being able to use a latrine due to overcrowding

Kajo-keji	39%
Tonj South	22%
Panyijiar	19%
Bor South	19%
Raja	17%

### Latrine availability

Top five assessed counties reporting not being able to use a latrine because none are available

Abiemnhom	100%
Pariang	100%
Tonj East	100%
Aweil West	96%
Aweil East	93%

### WASH based mortality

Top five assessed counties reporting cholera or diarrhoea as their main cause of death

Mayom	38%
Tonj South	33%
Tonj East	25%
Yirol West	22%
Kajo-keji	22%

### WASH based health concerns

Top five assessed counties reporting cholera or diarrhoea as their main health problem

Mundri East	27%
Akobo	24%
Mayom	23%
Magwi	22%
Tonj South	22%
