27 June, 2018	05 September, 2018
07 July, 2018	07 September, 2018
09 July, 2018	17 September, 2018
19 July, 2018	19 September, 2018
21 July, 2018	29 September, 2018

Summary:
This map displays standing water detected from remote sensing analyses of twenty Sentinel-1 images with 10 m resolution (table 1). The outline represents the maximum extent of standing water detected from the composite analysis of the twenty dates selected. These results represent a preliminary investigation and have not been validated in the field. The results are only representative of the dates analyzed and the classification scheme utilized. Remote sensing techniques such as this are inherently limited by a variety of factors, in particular the spatial resolution of the data analyzed.

For more details on the remote sensing methodology please refer to :
