

South Sudan - Water, Sanitation and Hygiene (WASH)

Assessment of Hard-to-Reach Areas in South Sudan

South Sudan Displacement Crisis

January 2018

Overview

The continuation of conflict since December 2013 has created a complex humanitarian crisis in the country, restricting humanitarian access and hindering the flow of information required by aid partners to deliver humanitarian assistance to populations in need. To address information gaps facing the humanitarian response in South Sudan, REACH employs its Area of Knowledge (AoK) methodology to collect relevant information in hard-to-reach areas to inform humanitarian planning and interventions outside formal settlement sites.

Using the AoK methodology, REACH remotely monitors needs and access to services in the Greater

Upper Nile, Greater Equatoria and Greater Bahr el Ghazal regions. AoK data is collected monthly and through multi-sector interviews with the following typology of Key Informants (KIs):

- KIs who are newly arrived internally displaced persons (IDPs) who have left a hard-to-reach settlement in the last month
- KIs who have had contact with someone living or have been in a hard-to-reach settlement in the last month (traders, migrants, family members, etc.)
- KIs who are remaining in hard-to-reach settlements, contacted through phone

Selected KIs are purposively sampled and have knowledge from within the last month about a specific settlement in South Sudan, with data collected at the settlement level. About half of settlements assessed have more than one KI reporting on the settlement. In these cases, data presented at the settlement level is the modal (most frequent) response for KIs reporting on that settlement. If there is an even number of 'yes/no' responses, data is aggregated as 'no consensus'.

All percentages presented in this factsheet, unless otherwise specified, represent the proportion of settlements assessed with that specific response.

The findings presented in this factsheet are indicative of the broad water, sanitation and hygiene (WASH) trends in assessed settlements in January 2018, and are not statistically generalisable.

Assessment Coverage

1,704 Key Informants interviewed

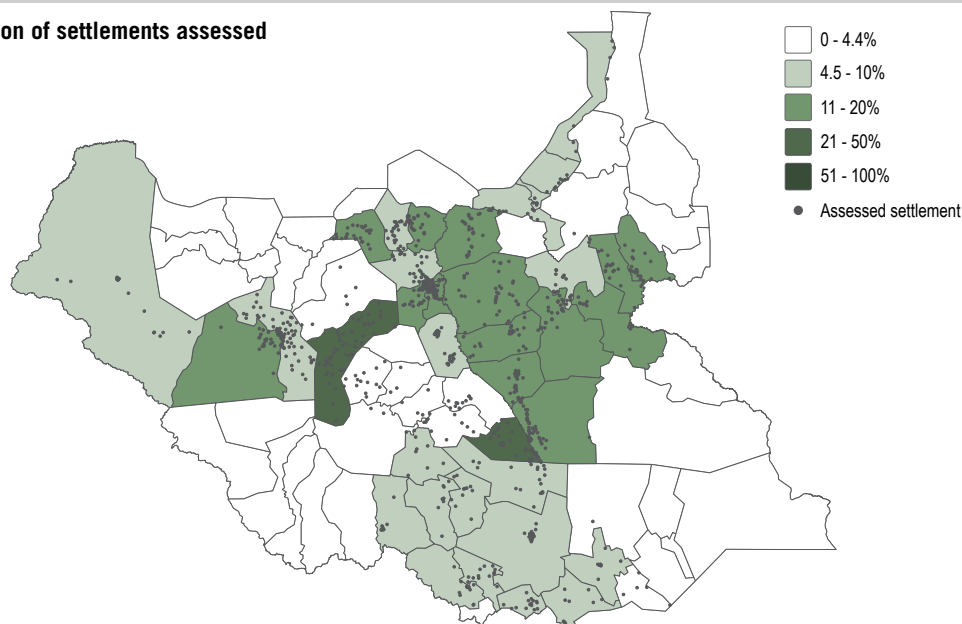

1,016 Settlements assessed

49 Counties assessed

38 Counties with 4.5% or more coverage¹

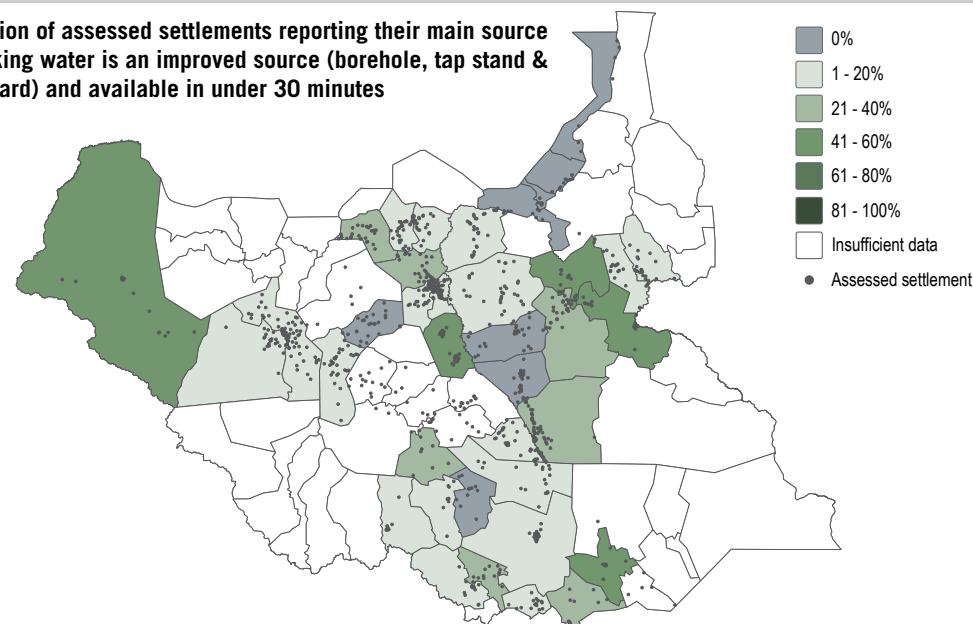

Assessment coverage

Proportion of settlements assessed

Improved Water Sources

Proportion of assessed settlements reporting their main source of drinking water is an improved source (borehole, tap stand & water-yard) and available in under 30 minutes

¹ Data is only represented for counties in which at least 5% of settlements have been assessed. The most recent OCHA Common Operational Dataset (COD) released in February 2016 has been used as the reference for settlement names and locations.

Assessment of Hard-to-Reach Areas in South Sudan

South Sudan Displacement Crisis

January 2018

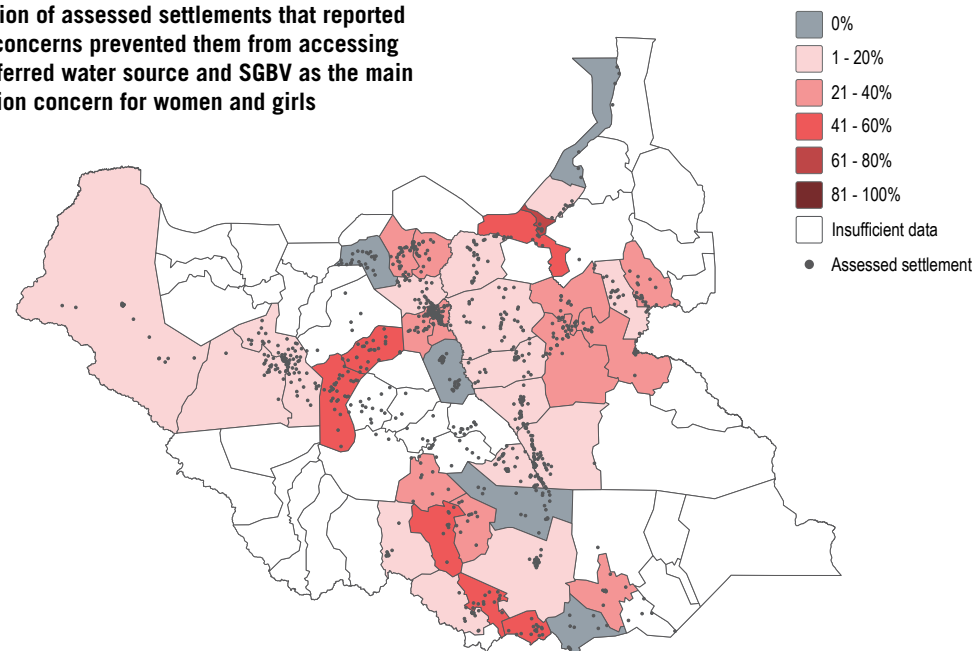

Access to water

Proportion of assessed settlements reporting the main source of drinking water is an unimproved source (a borehole, tap stand, or water yard)

Safe water access and sexual and gender based violence (SGBV)

Proportion of assessed settlements that reported safety concerns prevented them from accessing the preferred water source and SGBV as the main protection concern for women and girls

Drinking water source

Top five assessed counties reporting an unimproved source or surface water (river, swamp, unprotected well) as their main source of drinking water

| | | |
|-------------|------|-------------|
| Malakal | 100% | <div></div> |
| Mundri East | 100% | <div></div> |
| Panyikang | 100% | <div></div> |
| Fashoda | 89% | <div></div> |
| Manyo | 83% | <div></div> |

Water access time

Top five assessed counties reporting needing more than 30 minutes to access their preferred drinking water source

| | | |
|-------------|------|-------------|
| Mundri East | 100% | <div></div> |
| Terekeka | 89% | <div></div> |
| Fashoda | 89% | <div></div> |
| Yei | 85% | <div></div> |
| Manyo | 83% | <div></div> |

Seasonal access to water

Top five assessed counties reporting access to the preferred drinking water source is only available in the wet season

| | | |
|------------|-----|-------------|
| Uror | 96% | <div></div> |
| Manyo | 67% | <div></div> |
| Rubkona | 56% | <div></div> |
| Tonj South | 45% | <div></div> |
| Mvolo | 44% | <div></div> |

Protection and water access

Top five assessed counties reporting safety concerns preventing them from accessing their preferred water source

| | | |
|-------------|-----|-------------|
| Tonj South | 81% | <div></div> |
| Mundri East | 73% | <div></div> |
| Nyirrol | 70% | <div></div> |
| Akobo | 67% | <div></div> |
| Malakal | 67% | <div></div> |

Assessment of Hard-to-Reach Areas in South Sudan

South Sudan Displacement Crisis

January 2018

Latrine use

Proportion of assessed settlements that reported less than half of people using latrines

Humans and animals sharing water source

Proportion of assessed settlements that reported an unprotected water source as the main source of drinking water and that animals and humans shared the same water source

Data not available for this month

Overcrowded latrines

Top five assessed counties reporting not being able to use a latrine due to overcrowding

Data not available for this month

Latrine availability

Top five assessed counties reporting not being able to use a latrine because none are available

Data not available for this month

WASH based mortality

Top five assessed counties reporting cholera or diarrhoea as their main cause of death

| | | |
|-------------|-----|-------------|
| Mundri East | 45% | <div></div> |
| Panyikang | 33% | <div></div> |
| Magwi | 30% | <div></div> |
| Fangak | 28% | <div></div> |
| Lainya | 23% | <div></div> |

WASH based health concerns

Top five assessed counties reporting cholera or diarrhoea as their main health problem

| | | |
|---------|-----|-------------|
| Fashoda | 67% | <div></div> |
| Malakal | 67% | <div></div> |
| Akobo | 50% | <div></div> |
| Manyo | 50% | <div></div> |
| Torit | 44% | <div></div> |
