

# Yemen WASH Needs Tracking System (WANTS)

Ash Shahil District, Hajjah Governorate

December 2022

The Yemen WASH Cluster launched the WASH Needs Tracking System (WANTS) with the support of REACH to provide high quality WASH needs data and inform more effective WASH programming and planning. The WANTS comprises a set of harmonized monitoring tools which, through partner data collection, provide updated information and analysis on WASH access and needs throughout Yemen.

The cholera household interview tool are household-level WANTS tool used in cholera priority districts<sup>1</sup>. The findings below are based on 57 household interviews conducted across 54 communities in Ash Shahil district, Hajjah governorate. Data was collected in December 2022 by RMENA for Human Relief & Development (RMENA), Action contre la Faim (ACF), and Agency For Technical cooperation & Development (ACTED). The type of assessed localities were rural areas. These findings should be interpreted as indicative of the WASH needs in Ash Shahil district.

## Demographics<sup>2</sup>

Total population in district	52,710
Total internally displaced people (IDP) in district	673
Proportion of the population living with a disability	15%

## Health

2020 Cholera Severity Score <sup>3</sup>	1
Global Acute Malnutrition (GAM) prevalence rate <sup>4</sup>	12%

## Water

Proportion of households who reported <b>travelling &gt;30min</b> to fetch water	65%
Proportion of households who reported <b>having enough water</b> for drinking, cooking, bathing and washing in the 30 days prior to data collection	16%
Proportion of households who reported <b>treating their drinking water</b>	60%

**Proportion of households reported using each type of main drinking water source in the 30 days prior to data collection:**

Water Trucking (Unimproved)	70%
Unprotected well (Unimproved)	5%
Borehole (Improved)	4%
Piped water into compound (Improved)	4%
Piped water connected to public tap (Improved)	4%
Protected rainwater tank (Improved)	4%
Surface water (river, dam, lake, pond, stream, canal) (Unimproved)	4%

**84% of assessed households were found to rely on unimproved water sources<sup>5</sup> in the 30 days prior to data collection.**

**74% of assessed households reported having issues related to the smell, taste and/or appearance of their water in the 30 days prior to data collection. Of the households that reported issues, the following issues were reported:<sup>6</sup>**

Bad appearance	34%
Bad taste	34%
Bad smell	31%

## Hygiene

**39% of the assessed households reported having soap available at place for handwashing**

**Proportion of households reported using each type of main handwashing device in the 30 days prior to data collection:**

Simple basin/bucket/pouring device, with no taps	56%
Other	16%
No device	11%
Buckets with taps	9%
Sink with tap water	5%
Tippy tap	4%

**82% of assessed households reported having issues accessing soap in the 30 days prior to data collection. Of the households that reported issues, the following issues were reported:**

Soap is too expensive	91%
The market is difficult to reach/too far away	6%
The market is difficult to reach/too far away	2%

## Sanitation

**Proportion of households reported using each type of main sanitation facility in the 30 days prior to data collection:**

Pit latrine with a slab and platform (Improved)	32%
Open hole (Unimproved)	26%
Flush or pour-flush toilet (Improved)	21%
Pit latrine without a slab or platform (Unimproved)	11%
Pit VIP toilet (Improved) <sup>7</sup>	9%
Open defecation (Unimproved)	2%

**32% of assessed households reported sharing their sanitation facility with at least one other family in the 30 days prior to data collection.**

1) Districts prioritized by the Yemen WASH Cluster for cholera intervention due to cholera incidence and clustering of cases, including high and/or sudden increases in cases. 2) All demographic information is based on UNOCHA 2022 Yemen Population projections. 3) Cholera severity scores based on Suspected Cholera Incidence Rate per 10,000 people. Reported by WHO for 2021 Humanitarian Needs Overview. Cholera Severity score is on a scale of 1 to 5 with 5 being the most severe. 4) Combined GAM prevalence, % children 6-59 months with MUAC 125mm or less and/or WFH Z-score -2 or less. Based on [Yemen Nutrition Cluster Achievements Analysis 2020-2022](#). 5) Improved drinking water source is as a source that, by nature of its construction, adequately protects the water from outside contamination, in particular from faecal matter. 6) Respondents could select more than one answer, results do not add up to 100%. 7) Pit VIP toilet is a ventilated improved pit latrine, latrine that has a pipe that allows for ventilation to reduce odour and flies.
