ES/NFI CLUSTER RAPID ASSESSMENT MECHANISM

December 2021

AFGHANISTAN - NANGARHAR PROVINCE KHOGYANI DISTRICT - JAMTALA

INTRODUCTION AND METHODOLOGY

Following over 40 years of conflict, displacement, and natural disaster, Afghanistan remains one of the most extensive humanitarian crises, with 24.4 million people in need of humanitarian assistance.¹ Of these, 10.9 million people are likely to be in severe or extreme need of shelter and/ or non-food items (NFI) assistance. To improve local responsiveness to support in-need populations in Afghanistan, the Emergency Shelter and NFI (ES/NFI) cluster launched a Rapid Assessment Mechanism (RAM) in 2021 to conduct rapid assessments among settlements across Afghanistan. Through the mechanism, ES/NFI Cluster Regional Focal Points identify potential caseloads and negotiate access to the locations, while key cluster partners in the province collect the data. The data is then cleaned and analysed by REACH before being presented in factsheet form.

Coordinated by ES/NFI Cluster Regional Focal Points, ES/NFI Partners DRC, IOM, IRC, and WAW conducted data collection in and around Jamtala settlement between 8 December and 14 December. Using a standardised Household Kobo Tool, a total of 98 household interviews were conducted from a population size of 5,000 households. All findings are indicative and should not be taken to be generalisable to the entire population. The following factsheet presents key findings of the data from the assessment, including demographics, shelter needs, and cross-cutting shelter concerns.

Reported household composition, disaggregated by age and gender:

.

Male 🛉	46%	Total	54% 🛉 Female
	2%	60+	2%
	14%	18-59	19%
	18%	6-17	20%
	12%	0-5	13%

X→ DISPLACEMENT

97% of displaced households reported that their current displacement was the first time that a majority of their household members had been displaced.

% of households reporting having been negatively affected by the following major shocks in the three months prior to data collection:⁴

None	39%
Active conflict or violence	32%
Anticipated conflict or violence	22%

1. UNOCHA, Humanitarian Needs Overview 2022: Afghanistan, January 2022.

2. IDPs who reported to having stayed in the host community for 2 to 24 months were considered 'Pro-

longed'.

3. IDPs who reported to having stayed in the host community for longer than 24 months were considered 'Protracted'.

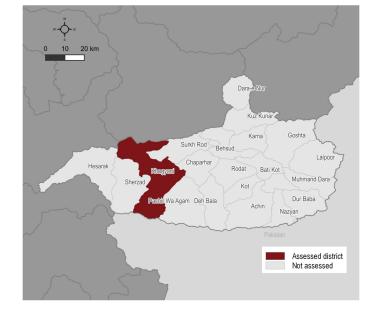

4. Respondents could select multiple responses.

5. ES/NFI Cluster vulnerability criteria included are marked by footnotes below.

6. Households were considered vulnerable if the head of household reported any type of disability.

Households surveyed reported the following displacement statuses:

Returnees	Prolonged IDPs ²
17%	37%
Migrants	Protracted IDPs ³
5%	24%
	17% Migrants

Key demographics of the interviewed households:

Average household
sizeFemale-headed
householdsOlder-persons
headed households916%8%

% of households by reported movement intentions in the 3 months following data collection:

93%	Stay in the current location	3%	Return to area of origin
4%	Move to another location in Afghanistan	0%	Move out of Afghanistan

average number of times IDP households that reported being displaced more than once reported that they had been displaced.

7. Households were considered vulnerable if they reported being female headed or headed by someone under the age of 18, and had no adult male members.

Households were considered vulnerable if anyone other than the head of household had a disability.
The ratio is calculated by dividing the total number of household members by able-bodied and working adult men and women. A household was considered vulnerable if the score was 8 or more.

10. A shelter was considered damaged if one or more than one section or element had been affected to a certain level which could potentially affect living conditions of the residents.

ES/NFI RAPID ASSESSMENT MECHANISM

لا VULNERABILITY

Reported household vulnerability score, according to ES/NFI Cluster criteria. $^{\rm 5}$

21% Vulnerable

79% Not Vulnerable

44% of households reported that the head of household had a disability.⁶

6% of households were found to be headed by a female or child head of household without the presence of an adult male household member.⁷

SHELTER

% of households per shelter type of shelter:

Permanent mud	40%	Damaged shelter ¹⁰	3%
Permanent brick	31%	Tent	3%
Permanent fired brick	15%	Makeshift shelter	2%
Transitional shelter	1%	Collective centre	1%
Unfinished shelter	4%	Open space (no shelter)	0%

16% of households reported living in open spaces, tents, or makeshift shelters.¹¹

% of households reporting their shelter having the following amenities:

Separate bathroom space	41%	
Separate kitchen space	31%	
Separate rooms for women	9%	•
Separate space for livestock	17%	

average number of rooms occupied by the household as reported by households. $^{\ensuremath{^{12}}}$

22% of households reported that their shelter had been damaged since Ramadan 2021.¹³ Among those households, the main reported reasons for the damage were:

Natural disaster	73%	
Poor quality of materials in shelter ¹⁴	23%	
Violence in the area	5%	

Of the 39% of households with a written or verbal accommodation

agreement, **89%** reported that they could not afford to pay their rent on time.

11. Households were considered vulnerable if their shelter was reported to be a tent, a makeshift shelter, damaged shelter, collective centre, transitional shelter, an open space, or they had experienced an eviction.

12. The number of occupied rooms refers to only to living space.

13. A shelter is considered damaged if one or more than one section or element has been affected to a certain level which can potentially affect living condition of the residents.

14. The reported materials were considered of 'poor quality' if they were either unable to sustain for the

The overall vulnerability of each household was calculated based on 11 key vulnerability criteria defined by the ES/NFI cluster. For each criteria, if the household met the criteria, a score between 0 and 3 was given, then added up, giving a total score between 0 and 24. A vulnerability category was then ascribed based on the following categories and scores: Not Vulnerable (0-8) and Vulnerable (9-16).

of households reported that one or more members of the household, not including the head of household, had a disability or chronic illness.⁸

48% of households were found to have a dependency ratio of 8 or more.⁹

% of households per reported degree of shelter damage:15

1%	Destroyed		3%	Severe	
13%	Moderate	36%	Minor	47%	No damage

84% of households reported that they had been unable to make repairs that they wanted to their shelters. Among these households, the top three reported reasons were:⁴

Shelter materials are too expensive	66%	
Professional labour is too expensive	65%	
Lack of authorization to do repairs	12%	

100% of households reported not having sufficient NFIs. % of households by types of NFIs they reported possessing:¹⁶

Mattress	53%	Pots	47%
Water containers	58%	Solar lamp	51%
Shoes	1%	Blanket	6%
Caps	3%	Fuel	4%
Jackets	2%	Tarpaulin	14%
Gloves	0%		

The average reported rent (in AFN) per household per month was found to be **1,052**.

0% of host community households that reported they were hosting other households in their shelter (0%) also reported that they were relatives of the households that they were hosting.

desired duration of time or could not function satisfactorily.

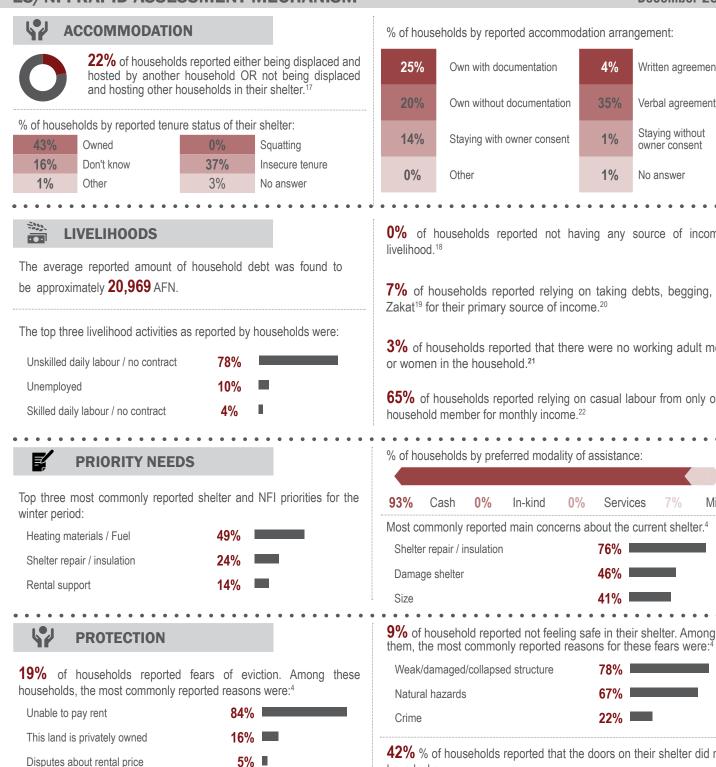

15. The degree of shelter damage indicates the level of a shelter damage from physical perspective and defines how suitable it is for living.

16. Households were asked if the following NFIs were owned in sufficient numbers (enough for each household member) by their household. If a household responded "no" to any of these NFIs, the household was considered as not having sufficient NFIs.
