Assessment of Hard-to-Reach Areas in South Sudan

South Sudan Displacement Crisis

August 2018

Overview

The continuation of conflict since December 2013 has created a complex humanitarian crisis in the country, restricting humanitarian access and hindering the flow of information required by aid partners to deliver humanitarian assistance to populations in need. To address information gaps facing the humanitarian response in South Sudan, REACH employs its Area of Knowledge (AoK) methodology to collect relevant information in hardto-reach areas to inform humanitarian planning and interventions outside formal settlement sites.

Using the AoK methodology, REACH remotely monitors needs and access to services in the Greater

Upper Nile, Greater Equatoria and Greater Bahr el Ghazal regions. AoK data is collected monthly and through multi-sector interviews with the following typology of Key Informants (KIs):

- KIs who are newly arrived internally displaced persons (IDPs) who have left a hard-to-reach settlement in the last month
- KIs who have had contact with someone living or have been in a hard-to-reach settlement in the last month (traders, migrants, family members, etc.)
- KIs who are remaining in hard-to-reach settlements, contacted through phone

Selected KIs are purposively sampled and have knowledge from within the last month about a specific settlement in South Sudan, with data collected at the settlement level. About half of settlements assessed have more than one KI reporting on the settlement. In these cases, data presented at the settlement level is the modal (most frequent) response for KIs reporting on that settlement. If there is an even number of 'yes/no' responses, data is aggregated as 'no consensus'.

All percentages presented in this factsheet, unless otherwise specified, represent the proportion of settlements assessed with that specific response.

The findings presented in this factsheet are indicative of the broad food security and livelihood trends in assessed settlements in August 2018, and are not statistically generalisable.

Assessment Coverage

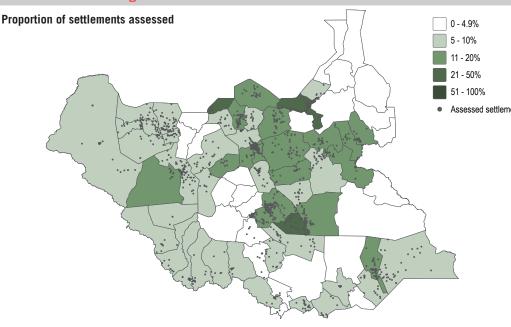

1,712 Key Informants interviewed

1.293 Settlements assessed

57 Counties assessed

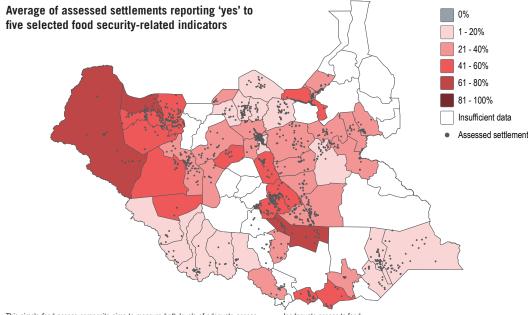

53 Counties with 5% or more coverage¹

Assessment coverage

¹ Data is only represented for counties in which at least 5% of settlements have been assessed. The most recent OCHA Common Operational Dataset (COD) released in February 2016 has been used as the reference for settlement names and locations.

Food access composite indicator

This simple food access composite aims to measure both levels of adequate access to food as well as severity of perceived hunger and application of severe consumptionbased coping strategies. The composite was created by averaging the 'yes' responses of settlements reporting on the following indicators, with all indicators considered to

- Inadequate access to food
- Consuming one or fewer meals per day
- Skipping days to cope with a lack of food or money to buy food
- Perceived hunger from inadequate food access: severe or worst it can be
- Wild foods known to be making people sick consumed all the time

Assessment of Hard-to-Reach Areas in South Sudan

Shocks

Shocks: IDPs

Top five assessed counties reporting presence of newly arrived IDPs as having a large impact on ability to access adequate food

Kajo-keji	72%	
Terekeka	61%	
Mundri East	55%	
Magwi	33%	
Tambura	33%	

Shocks: health

Top five assessed counties reporting perceived health problems as having a large impact on ability to access adequate food

Guit	93%
Rubkona	85%
Abiemnhom	71%
Pariang	65%
Koch	61%

Shocks: cereal prices

Top five assessed counties reporting increase in cereal prices as having a large impact on ability to access adequate food

Ayod	71%
Panyijiar	63%
Tonj East	63%
Malakal	58%
Awerial	57%

Shocks: livestock

Top five assessed counties reporting livestock disease outbreak as having a large impact on ability to access adequate food

Kajo-keji	56%
Rubkona	44%
Aweil West	35%
Bor South	33%
Yirol West	33%
