

### **WASH Site Profile - Camp 20**

Ukhia, Cox's Bazar, Bangladesh (May 2018) GPS Coordinates: 21.1909, 92.1402

#### **Summary**

This profile provides an overview of water, sanitation and hygiene (WASH) infrastructure within Camp 20 in Ukhia, Cox's Bazar. Primary data for the sixth round was collected between 22 April -12 May 2018.¹ Findings should be considered indicative only. The full camp dataset is available on HDX.

# Site Overview Key WASH Infrastructure # of individuals: 977 # of latrines: 152

(% functional and # of households: 241 safe²): (91%)

# of shelters:

# of shelters:

# of improved water sources:<sup>3</sup>

(% functional):

(82%)

# of individuals per shelter: 4.5 # of washrooms: 120

#### **Water Access**

Three most commonly identified types of water points, by functionality:

Key sectoral standards:	Target	<b>Current Round</b>	Achievement
# of people per functional improved water source <sup>3</sup>	max. 250	21	
% of shelters with at least 1 functional improved water source³ within 200m	100%	100%	
% of functional improved water source with no latrine within 10m	100%	20%	

**Functionality** 

Lighting

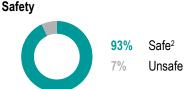

### 4

### Sanitation

#### Latrine characteristics:

98% Functional (non-full)
2% Non-functional

0%	With lights
100%	Without lights

Key sectoral standards:	Target	Current Round	Achievement
# of people per functional (non-full) and safe latrine <sup>2</sup>	max. 20	7	
# of people per functional (non-full) latrine	max. 20	7	
# of people per safe latrine <sup>2</sup>	max. 20	7	
% of shelters with at least one functional and safe latrine² block within 50m	100%	99%	

Targets based on long term WASH Sector Standards / Indicators for the Rohingya response, Sphere Minimum Standards as well as Department of Public Health and Environment (DPHE) Minimum Standards. ● Minimum standard/indicator reached, ● 75-99% of the minimum standard reached, or within 25% of minimum standard reached, or within 26-50% of minimum standard reached, ● Less than 50% of minimum standard reached, or within greater than 50% of minimum standard reached.

3. This includes handpumps / tubewells, tapstands and water tanks

<sup>1</sup> REACH enumerators conducted a full sweep of all sites and camps (as per boundaries defined by ISCG) and used a Kobo form to log all key infrastructure observed during this sweep.

<sup>2 &#</sup>x27;Safe' refers to fully covered latrines (i.e. a latrine with four walls, a roof and a lockable door).
