

# Adamawa and Borno - Health

Assessment of Hard-to-Reach Areas in Northeast Nigeria

#### Introduction

The continuation of conflict in Northeast Nigeria has created a complex humanitarian crisis, rendering sections of Borno and Adamawa states as hard to reach. To address information gaps facing the humanitarian response and inform humanitarian actors on the demographics of households in hard-to-reach areas of Northeast Nigeria, as well as to identify their needs, access to services and movement intentions, REACH has been conducting monthly assessments of hard-to-reach areas in Northeast Nigeria since November 2018.

#### Proportion of settlements assessed, January 2021

#### Methodology

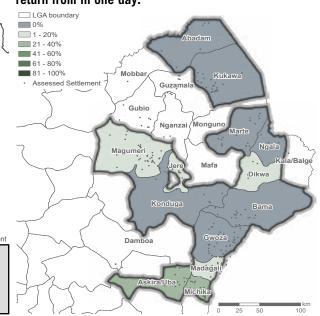

Using the Area of Knowledge (AoK) methodology, REACH remotely monitors the situation in hard-to-reach areas through monthly multi-sector interviews in accessible Local Government Area (LGA) capitals with key informants (KIs) who are either (1) newly arrived internally displaced persons (IDPs) who have left a hard-to-reach settlement in the last month or (2) KIs who have had contact with someone living or having been in a hard-to-reach settlement in the last month (traders, migrants, family members, etc.).

If not stated otherwise, the recall period for each question is set to one month prior to the last information the KI has had from the hard-to-reach area. Selected KIs are purposively sampled and are interviewed on settlement-wide circumstances in hard-to-reach areas, rather than their individual experiences. Responses from KIs reporting on the same settlement are then aggregated to the settlement level. The most common response provided by the greatest number of KIs is reported for each settlement. When no most common response could be identified, the response is considered as 'no consensus'. While included in the calculations, the percentage of settlements for which no consensus was reached is not displayed in the results below.

Results presented in this factsheet, unless otherwise specified, represent the proportion of settlements assessed within an LGA. Findings are only reported on LGAs where at least 5% of populated settlements and at least 5 settlements in the respective LGA have been assessed. **The findings presented are indicative of broader trends in assessed settlements in January 2021, and are not statistically generalisable<sup>2</sup>.** Due to precautions related to the COVID-19 outbreak, data was collected remotely through phone based interviews with assistance from local stakeholders. Data collection took place from January 29th.

#### **含 Access to health services**

Proportion of assessed settlements where it was reported that there was a functional health care service that the population could reach and return from in one day:

Barriers to accessing healthcare services were reported in 93% of assessed settlements.

In those settlements, the most commonly reported barriers were:

Never had health facilities nearby	75%	
No health care workers in the area	9%	
Facilities destroyed by conflict	8%	
No drugs	1%	
Other barriers	1%	

The most recent dataset on grid3.gov.ng/datasets has been used as the reference for settlement names and locations, and adjusted to account for deserted villages based on information shared by OCHA

<sup>&</sup>lt;sup>2</sup>Due to changes in migration patterns, the specific settlements assessed within each LGA vary each month. Changes in results reported in this factsheet, compared to previous factsheets, may therefore be due to variations in the assessed settlements instead of changes over time.

## Adamawa and Borno - Health

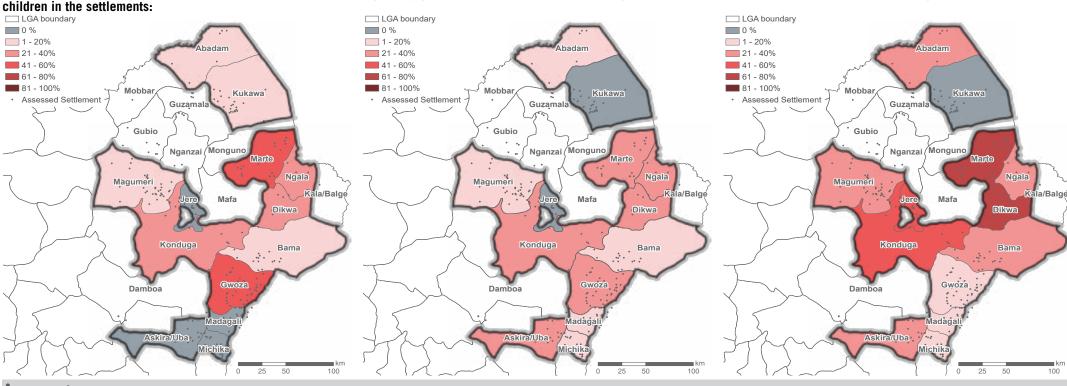

Assessment of Hard-to-Reach Areas in Northeast Nigeria

### Mutrition

Proportion of assessed settlements where perceived malnutrition Proportion of assessed settlements where malnutrition was among children was reported to affect more than half or all the reportedly perceived as a cause of death among children:

### \* Mortality increase

Proportion of assessed settlements where a higher perceived number of deaths than normal was reported:

### Main health concerns

Most commonly reported main health problem, by % of assessed settlements:

Malaria or fever	59%	
Malnutrition	14%	
Waterborne diseases	10%	
Other problem	6%	
Skin infection	3%	

Top five LGAs with the highest proportion of assessed settlements Top five LGAs with the highest proportion of assessed settlements health problem:

Jere	70%
Konduga	67%
Marte	67%
Abadam	64%
Dikwa	63%

where perceived malaria or fever were reported to be the main where perceived waterborne diseases were reported to be the main health problem:

Dikwa	25%
Ngala	20%
Michika	19%
Madagali	15%
Abadam	14%
