

Multi-Sector Needs Assessment - Host Community

Teknaf Paurashava Union, Teknaf Upazila, Cox's Bazar, Bangladesh

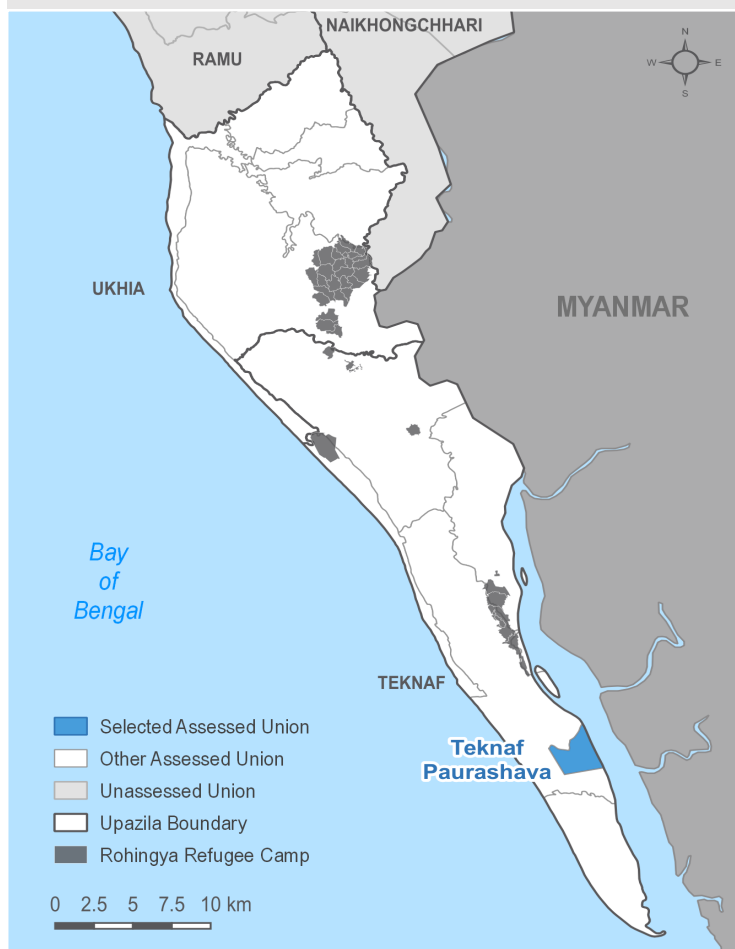

Humanitarian Aid
and Civil Protection

Background and Methodology

Since August 2017, an estimated 728,306 Rohingya refugees have arrived in Bangladesh's Cox's Bazar district from Myanmar, bringing the total number of refugees residing in Cox's Bazar, to approximately 906,527.¹ The rapid and massive increase of the refugee population, concentrated in the south of the district in Ukhia and Teknaf, has reportedly had a substantial impact on Bangladeshi host communities' food security, economic vulnerability, market access, labour opportunities and environment.

Based on an identified data gap regarding the needs of the host community population after August 2017, a multi-sector needs assessment (MSNA) was conducted under the coordination of ISCG and facilitated by REACH, in partnership with NPM-ACAPS Analysis Hub, and Translators Without Borders in consultation with Union Nirbahi Officers (UNO).² The MSNA targeted the Bangladeshi host community population living in 11 unions across two Upazilas: Ukhia (5 unions) and Teknaf (6 unions). This series of factsheets (14 in total) presents the findings at the Union level (11), the Upazila level (2), and the overall level (1). This factsheet presents the findings for Teknaf Paurashava. A household survey was conducted using a stratified random sample to produce results for Teknaf Paurashava where 259 households, that comprised of 1,497 individuals, were surveyed. The results are generalisable to 95% confidence level and 6% margin of error for Teknaf Paurashava. Data for this assessment was collected between 11 November - 6 December 2018. The assessment aimed for a 50/50 balance between male and female respondents.

Population³

Households - 4,752

Individuals - 25,056

Demographics

35.1

Average age of respondent

5.8

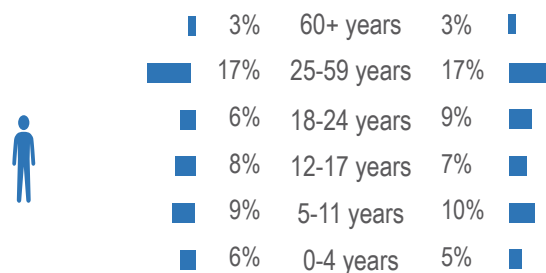

Average household size

62% female respondents

38% male respondents

Composition of surveyed households

34% of households with pregnant or lactating women

49% households with at least one child under 5 years old

94% households with at least one child under 18 years old

16% of household heads were female

30% of households with at least one person with a disability or chronic illness

Health

93% of households with children under 5 reported all children under 5 having an immunization card

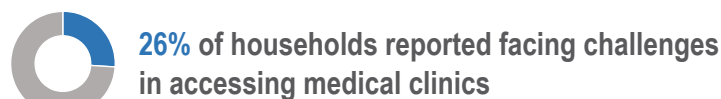

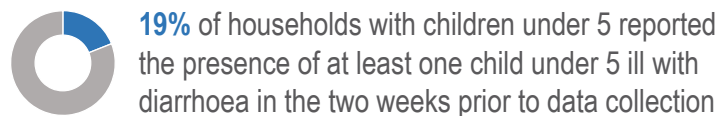

84% of households with children under 5 reported all children under 5 sleeping under a mosquito net the night prior to data collection

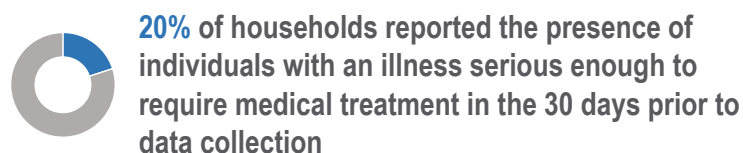

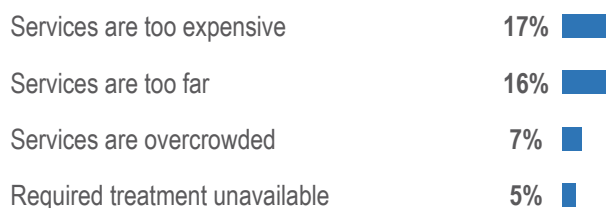

- As reported by UNHCR in the population data and key demographical indicators (31 Dec 2018)
- In Bangladesh the Upazila Nirbahi Officer often abbreviated UNO, is the chief executive of an Upazila (sub-district) and a mid-level officer of the Bangladesh Civil Service (Administration Cadre)
- As reported by Bangladesh Bureau of Statistics in "District Statistics 2011 Cox's Bazar". See link: <http://www.bbs.gov.bd/site/page/2888a55d-d686-4736-bad0-54b70462afda/->

Multi-Sector Needs Assessment - Host Community

Teknaf Paurashava Union, Teknaf Upazila, Cox's Bazar, Bangladesh

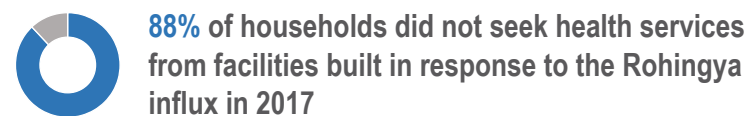

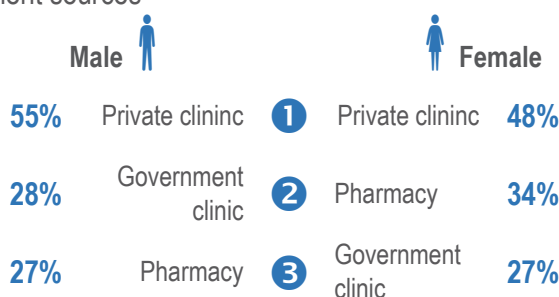

% of households reporting facing challenges in accessing medical clinics, by challenges⁴

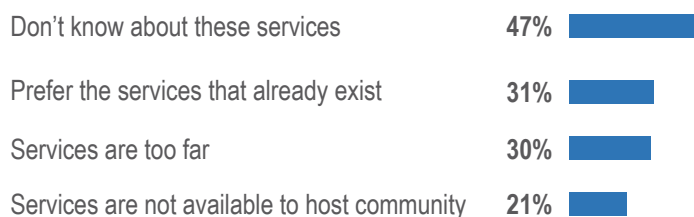

Of individuals reported to have had an illness serious enough to require medical treatment in the 30 days prior to data collection, **93%** individuals sought treatment for the illness⁵

Of individuals who sought treatment, % accessing different treatment sources⁶

Of 88% households not using facilities built for Rohingya influx, % reporting reasons for non-use⁷

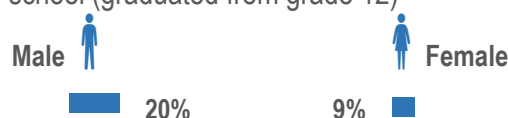

Education

% of individuals, by highest grade achieved

% of individuals aged 12-24 reported to have completed primary school (graduated from grade 5)

% of individuals aged 18-24 reported to have completed secondary school (graduated from grade 12)

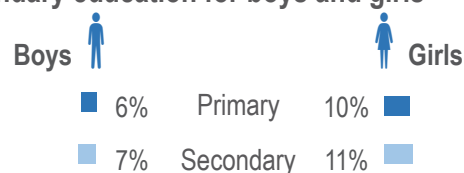

% of children and youth reported to be attending formal education during the 2018 academic year⁸

% of children and youth reported to be attending non-formal education during the 2018 academic year⁹

% of households reporting barriers accessing primary and secondary education for boys and girls¹⁰

4. Four most common challenges accessing medical clinics are shown, and respondents could select more than one option.

5. Sample size male (n=112) and female (n=147)

6. Three most common treatment sources are shown.

7. Respondents could select more than one option.

8. Formal education includes government-run schools, Aliah madrassahs (madrassahs teaching government-certified curriculum), and private schools.

9. Nonformal education includes NGO schools, madrassahs other than Aliah madrassahs (and hence not government certified), and vocational training courses.

10. This question was only asked if respondent household contained boys/girls of primary (5-11) and secondary (12-17) school age.

Multi-Sector Needs Assessment - Host Community

Teknaf Paurashava Union, Teknaf Upazila, Cox's Bazar, Bangladesh

% of households reporting barriers accessing primary and secondary education for boys and girls, by barrier¹¹

	Primary		Secondary	
	Boys	Girls	Boys	Girls
Services are too expensive	5%	6%	6%	8%
Facilities are too far	3%	6%	5%	7%
Safety concern at or on the way to facilities	2%	2%	0%	5%

6% of households reported receiving awareness training on child rights in the 6 months prior to data collection

7% of households reported receiving awareness training on importance of education in the 6 months prior to data collection

8% of households with children aged 5-11 reported receiving aid distribution from formal schools in the 6 months prior to data collection

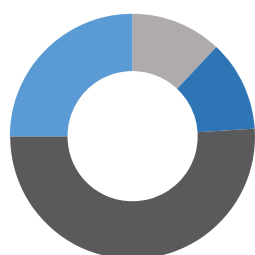

6% of households with children aged 12-17 reported receiving aid distribution from formal schools in the 6 months prior to data collection

% of households reporting receiving aid distributions from formal schools in the 6 months prior to data collection, by type of distribution received¹²

Aid	Aged 5-11	Aged 12-17
Health and Hygiene/WASH kit	1%	1%
Winterization kit	1%	1%
School supply	6%	6%

Shelter & Non-Food Items

% of households by shelter type¹³

12% Jhuprie
12% Kutcha
51% Semi Pucca
25% Pucca

% of households reporting use of different fuels as their primary fuel for cooking¹⁴

Firewood	51%
LPG/gas cylinder	48%
Dried leaf hay	1%

90% of households reported being connected to the electricity grid

Of households that reported being connected to the grid, % that reported average electricity availability per day in the 30 days prior to data collection¹⁵

More than 6 hours	89%
Less than 6 hours	10%

10% of households reported receiving training on how to protect their shelter from strong wind/cyclone.

8% of households reported receiving training on how to protect their shelter from flood

% of households reporting the NFIs most urgently needed for their shelter¹⁶

Blanket	49%
Kitchen set	44%
Solar lamp	38%
Cooking stove	37%
Mosquito net	17%

11. Three most common education barriers are shown, and respondents could select more than one option. Sample size aged 5-11 boys (n=119) and girls (n=135) and aged 12-17 boys (n=142) and girls (n=110)

12. Respondents could select more than one option. The option of food was not included in the types of aid. Sample size for household with children aged 5-11 (n=35) and children aged 12-17 (n=51)

13. In Bangladesh, housing is classified into four categories according to structure type and the materials used:

- 1) Jhuprie (temporary): are shacks made from branches, bags, tarpaulin, jute, etc.
- 2) Kutcha (temporary): made of mud, bamboo, wood and corrugated iron sheets (CIS) as roofs.
- 3) Semi-pucca (semi-permanent): where walls are made partially of bricks, floors are made from cement, and roofs from corrugated iron sheets.
- 4) Pucca (permanent): with walls of bricks and roofs of concrete.

14. Three most common primary fuels for cooking are shown.

15. This question was only asked to the 90% of respondents who reported their households were connected to the grid.

16. Five most common items are shown, and respondents could select up to three options.

Multi-Sector Needs Assessment - Host Community

Teknaf Paurashava Union, Teknaf Upazila, Cox's Bazar, Bangladesh

Humanitarian Aid
and Civil Protection

13% of households reported having a solar light

Security of tenure

% of households reporting ownership of their plot of land and/or house

Of households who reported ownership of their plot of land or house, 91% reported holding the deed to it

% of households who reported renting or being hosted on their plot of land or house¹⁷

WASH

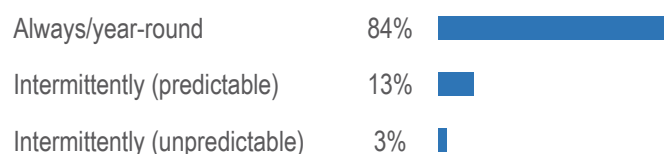

Water

% of households with access to improved drinking water sources

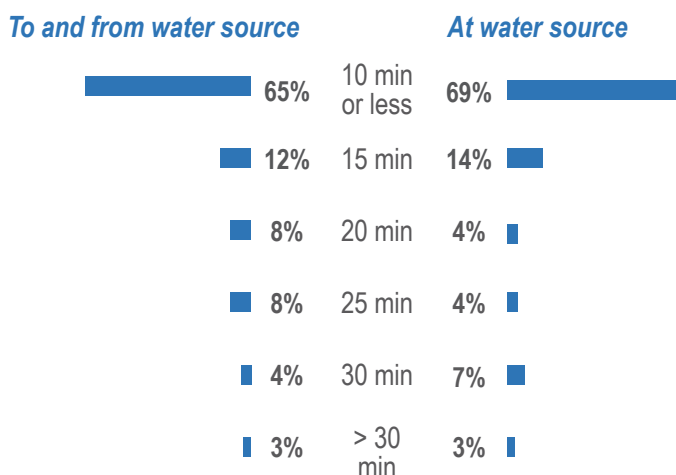

Primary drinking water sources	
✓ Improved water sources	99%
Piped water tap/tapstand into settlement site	12%
Tubewells/borehole/handpump	71%
Protected dug well	12%
Cart with small tank or drum	4%
✗ Unimproved water sources	1%
Surface water (river, dam, lake, pond, stream, canal)	1%

Of households reporting access to an improved drinking water source, % that reported different levels of reliability on availability of water¹⁸

79% of households reported having enough water for drinking, cooking, washing and bathing

% of households by time required to travel in both directions and queuing at the water source

34% of households reported having problems collecting water

% of households reporting problems collecting water, by problem¹⁹

- 1 Water source is too far 22%
- 2 Water tastes bad 12%
- 3 The source is only available certain times of the day 7%

25% of households reported treating water before drinking

% of households reporting use of different water treatment practices²⁰

Household filters	14%
Cloth filters	10%
Boiling	1%

17. This question was asked to households that reported not owning land.

18. This question was asked only to the 99% respondents who reported improved sources of water as their primary water source.

19. Three most common problems of collecting water are shown, and respondents could select more than one option.

20. Three most common water treatment methods are shown, and respondent could select more than one option.

Multi-Sector Needs Assessment - Host Community

Teknaf Paurashava Union, Teknaf Upazila, Cox's Bazar, Bangladesh

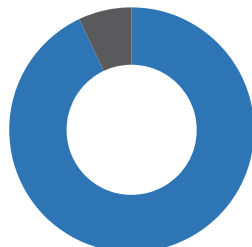

Humanitarian Aid
and Civil Protection

Sanitation

% of households by reported usual defecation location

Household Latrine	93%
Communal Latrine	7%
Open defecation	0%

19% of households reported facing problems accessing latrines

% of households reporting problems accessing latrines, by problem²⁰

1	Too many people using it	8%
2	Latrine is not clean	6%
3	Latrine smells bad	5%

Environmental sanitation

% of households reporting visible presence of solid waste, stagnant water or human faeces within 30 metres of their shelter during the 30 days prior to data collection²¹

Trash/ solid waste	49%
Stagnant water	35%
Human faeces	19%

Hygiene

58% respondents were able to name at least 3 of the 5 critical times for handwashing

% of households where respondent named different handwashing times²²

Critical times	
After defecation	93%
Before eating	92%
Before cooking	57%
After cleaning a child's bottom	15%
Before feeding children	15%

25% of households reported women facing problems with accessing menstrual hygiene materials²³

% of households reporting problems accessing menstrual hygiene material, by problem^{23,24}

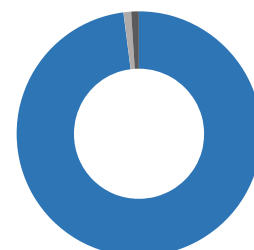

Too expensive	15%
Other needs are prioritized	14%
Not enough available in market	4%
Preferred type not available	3%

Food Security and Livelihood

% of households reporting primary food source

Market	98%
Own production	1%
Other	1%

% of households falling into different food consumption groups based on household Food Consumption Score²⁵

Acceptable	64%
Borderline	29%
Poor	7%

21. Three most common problems accessing latrine are shown, and respondents could select more than one option.

22. Respondents were asked about solid waste, stagnant water and human faeces in three separate questions.

23. Respondents could select more than one option.

24. Questions on menstrual hygiene management were only asked to female respondents, by female enumerators.

25. The frequency weighted diet diversity score or "Food Consumption Score" is a score calculated using the frequency of consumption of 9 different food groups consumed by a household/individual during the 7 days before data collection. Based on the score they receive, households are categorised into food consumption groups indicating different levels of dietary diversity. Bangladesh-specific thresholds were used to make these calculations. See link: <https://www.wfp.org/content/coping-strategies-index-field-methods-manual-2nd-edition>

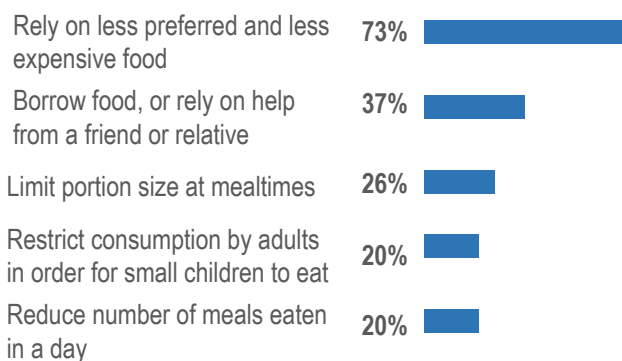

Multi-Sector Needs Assessment- Host Community

Teknaf Paurashava Union, Teknaf Upazila, Cox's Bazar, Bangladesh

Average household Coping Strategy Index (CSI) was 8 (out of a possible 56)²⁶

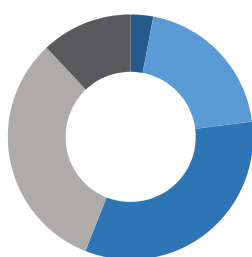

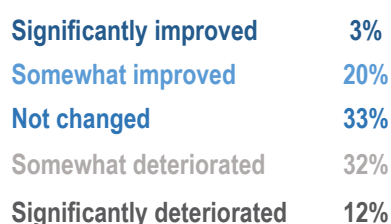

% of household reporting use of different consumption based coping strategy²⁷

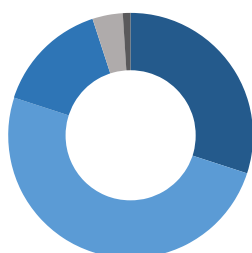

% of households reporting three main sources of income sustaining their household in the 30 days prior to data collection²⁸

% of households reporting changes in their economic status in the 12 months prior to data collection

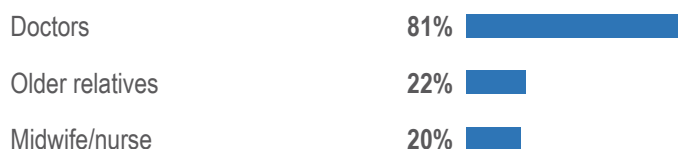

% of households reporting changes in cost of living in the 12 months prior to data collection

Nutrition

% of households where women of reproductive age were reported to have awareness of different sources of support for infant and young child feeding²⁹

Protection

31% of females aged 20-25 years were reported to have married before age 18³⁰

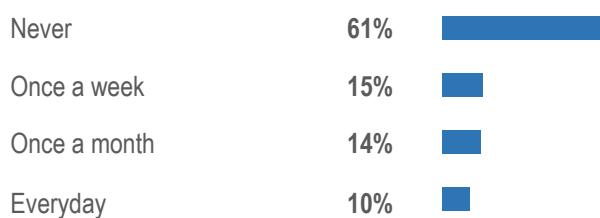

% of households reporting the presence of community based protection mechanisms³¹

83% of households reported feeling secure in their current location.

Perceived attitudes and experiences regarding Rohingya refugees

% of households reporting different levels of interaction with Rohingya refugees

26. This assessment used the "reduced" CSI (rCSI), which measures coping behaviours in the 7 days prior to the data collection in response to inadequate food or insufficient money to buy food.

27. Respondents were asked on each coping strategy and how many day in the past 7 days did they use this strategy.

28. Five most common main sources of income are shown, and respondents could select up to three options.

29. This question was asked to female respondents, by female enumerators. Respondents could select more than one option. The results are generalisable to 95% confidence level and 10% margin of error.

30. This question was only asked for women/men between the age of 20-25, who reported to be married. Sample size male (n=34) and female (n=95)

31. Three most common responses are shown, and respondents could select more than one option. Question was framed as follows: "Are you aware of any groups or committees of community members in your location that are working on any of the following issues?"

Multi-Sector Needs Assessment - Host Community

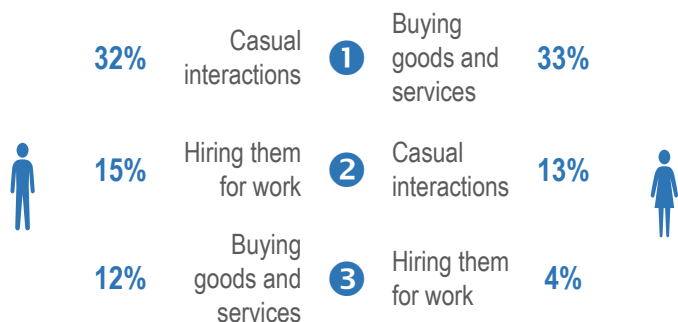

Teknaf Paurashava Union, Teknaf Upazila, Cox's Bazar, Bangladesh

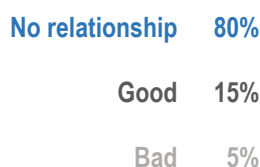

Of households who reported different levels of interaction with Rohingya refugees in the 30 days prior to data collection, % reporting different types of interaction³²

Male respondents

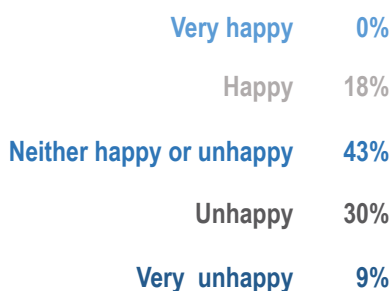

Female respondents

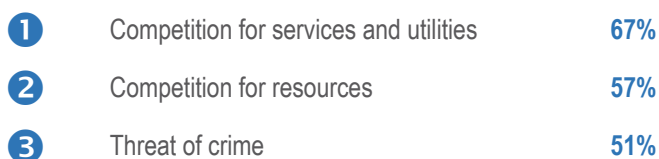

% of households reporting types of relationships with Rohingya refugees

% of households reporting attitudes towards the presence of Rohingya refugees in their communities

Of 39% households who reported being unhappy or very unhappy with the presence of Rohingya refugees in their communities, % who gave different reasons³³

32. Three most common interactions are shown, and respondents could select more than one option.

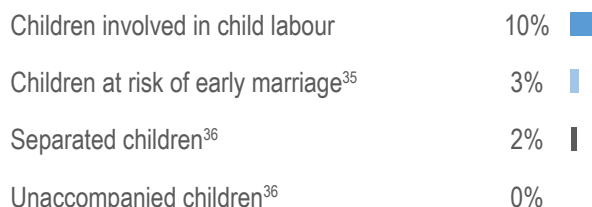

33. Respondents could select more than one option.

Child Protection

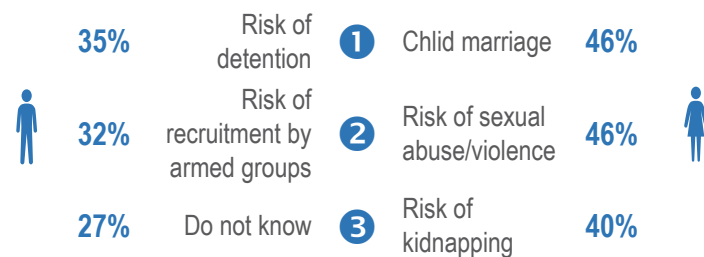

14% of households reported the presence of at-risk children³⁴

% of households reporting the presence of safety risks to boys and girls in their communities³⁷

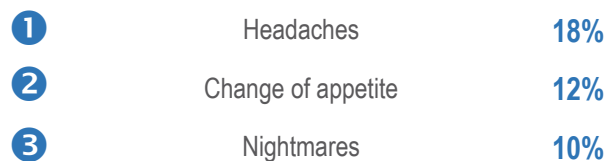

Risk for boys

Risk for girls

39% of households reported the presence of children exhibiting at least one behaviour relating to symptoms of distress in the 30 days prior to data collection³⁸

% of households who report the presence of children exhibiting behaviours that relate to symptoms of distress in the 30 days prior to data collection, by type of behaviour³⁹

34. Households were deemed to contain at-risk children if they reported the presence of at least one child that was separated, unaccompanied, at risk of early marriage, or involved in child labour.

35. For children at risk of early marriage, respondents were asked if there was anybody in the household under the age of 18 who was married or about to get married.

36. For separated and unaccompanied children, respondents were asked if any new members under the age of 18 had joined the household in the past 6 months (excluding births and marriages), and if so what their relationship to the head of household was. If children were related to the head of the household, they were categorised as separated; if not, they were categorised as unaccompanied.

37. Three most common safety risk for boys and girls are shown, and respondents could select more than one option.

38. Respondents could select more than one option.

39. Three most common symptoms of distress are shown. There were 14 other options including "none". 61% reported none. Question was framed as follows: "Within the past 30 days, have any children in this household experienced any of the following signs of distress?"; options were read out to respondents; respondents could select more than one option.

Multi-Sector Needs Assessment - Host Community

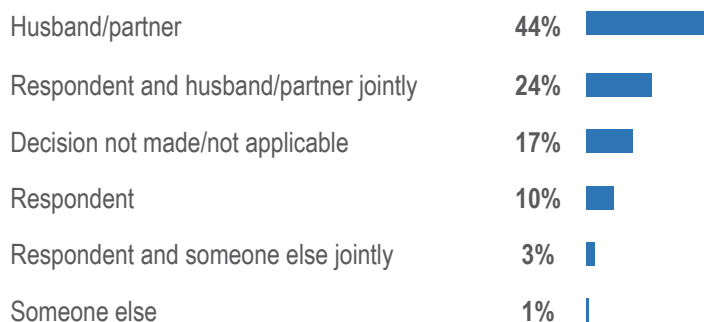

Teknaf Paurasabha Union, Teknaf Upazila, Cox's Bazar, Bangladesh

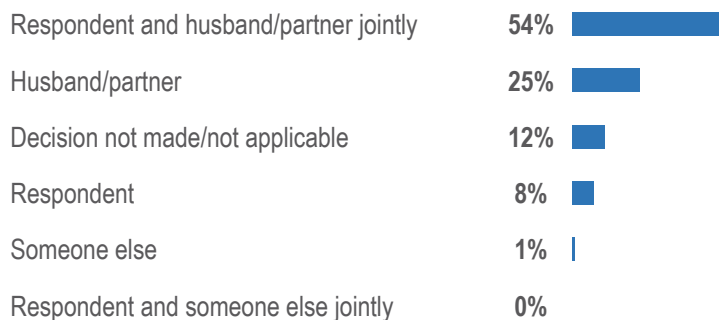

Gender-Based Violence

% of women with final say on specified household decisions⁴⁰

Who has a final say on whether or not you should work to earn money?

Who has the final say on whether or not to use a method to avoid having children?

% of women that reported controlling the money needed to buy specified items⁴⁰

Items	Yes	No	Don't buy
Vegetables or fruits	48%	29%	22%
Clothes for yourself	42%	40%	18%
Any kind of medicine for yourself	32%	48%	20%
Toiletries for yourself	37%	41%	22%

Freedom of movement for women⁴⁰

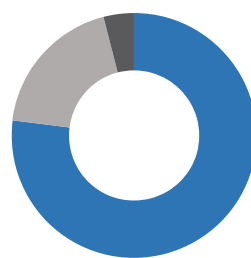

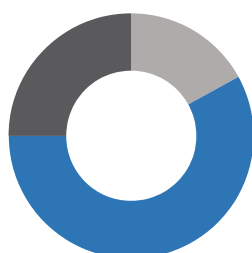

% of women who reported they are allowed to move to specified places

Market

Alone 17%

Not alone 58%

Never 25%

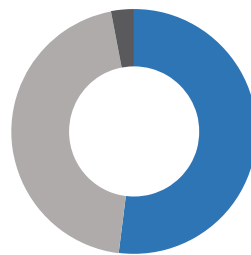

Health center

77% Not alone

3% Never

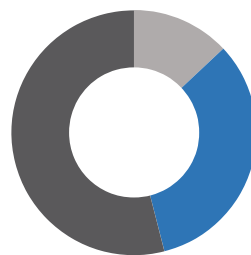

Neighbours' home

45% Alone

52% Not alone

3% Never

Local religious space

13% Alone

33% Not alone

54% Never

% of men with specified attitude on gender roles in family life⁴¹

	Agree	Disagree	Depends
The important decisions in the family should be made only by the men of the family.	58%	39%	3%
If the wife is working outside the home, then the husband should help her with household chores.	69%	27%	4%
A married woman should be allowed to work outside the home if she wants.	15%	68%	16%
The wife has a right to express her opinion even when she disagrees with what her husband is saying.	15%	71%	24%
A wife should tolerate being beaten by her husband in order to keep the family together.	35%	54%	11%
It is better to send a son to school than it is to send a daughter.	18%	79%	3%
Women should have a say in important decisions in the community.	28%	53%	19%

40. These questions were only asked to female respondents, by female enumerators.

Respondents were asked for consent prior to discussing these topics. The results are generalisable to 95% confidence level and 10% margin of error.

41. These questions were only asked to male respondents, by male enumerators. Respondents were asked for consent prior to discussing these topics. The results are generalisable to 95% confidence level and 10% margin of error.

Communication with Communities

Early warning mechanism for cyclones

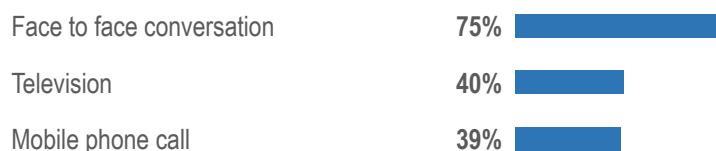

88% of households reported receiving early warning messages prior to the arrival of Cyclone Mora in May 2017

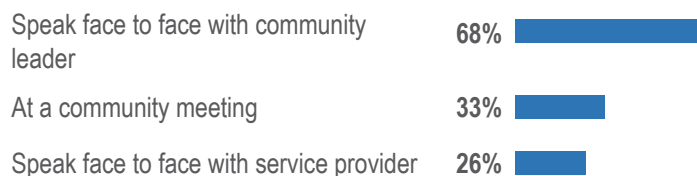

70% of households reported mosque loudspeaker as the most preferred way of receiving early warning sign in future

% of households reporting access to different means of communication/information sources in the 30 days prior to data collection⁴²

% of households reporting most preferred ways of providing feedback about services in their area⁴³

% of households reporting different information needs⁴⁴

42. Three most common main ways of accessing information are shown, and respondents could select more than one option. Question was framed as follows: "In the last 30 days, what were the main ways you got information about what is happening here?"

43. Three most common preferred ways of providing feedback about services are shown, and respondents could select more than one option.

44. Five most common different information needs are shown, and respondents could select more than one option.
