INTRODUCTION

In order to provide an evidence base on evolving market dynamics in Rohingya refugee camps in response to the COVID-19 outbreak in Bangladesh, REACH launched the COVID-19 Market Monitoring Initiative (MMI) in April 2020.

This factsheet presents an overview of trends in prices for key food and non-food items (NFIs), as well as indicators on the impact of COVID-19 in the assessed markets. A reduced set of commodities were selected for initial monitoring rounds but are subject to change as the situation evolves. Data collection is currently conducted on a monthly basis remotely through phone interviews with market vendors. A more detailed methodology can be found on the last page. Previous bi-weekly factsheets of the COVID-19 MMI can be found at this link.

PRICES OF MONITORED ITEMS

Item	Unit	# of KIs	Median price in BDT	Change since 3-4 June 2020
Food Items				
Rice	1 kg	5	38	▲ 9%
Lentils	1 kg	4	50	▶ 0%
Cooking oil	1 L	5	90	▶ 0%
Leafy greens	0.5 kg	4	15	▶ 0%
Bananas	12 pcs	4	110	▼8%
Eggs	12 pcs	8	99	▼ 3%
Dry fish	1 kg	2	150	▶ 0%
Chicken	1 kg	3	160	▼ 6%
Non-Food Items				
Soap	100 g	7	22	▼ 12%
Washing powder	0.5 kg	7	45	▲ 12%
Paracetamol	12 pcs	No KIs	No Data	No Data
Tarpaulin	1 pc	No KIs	No Data	No Data

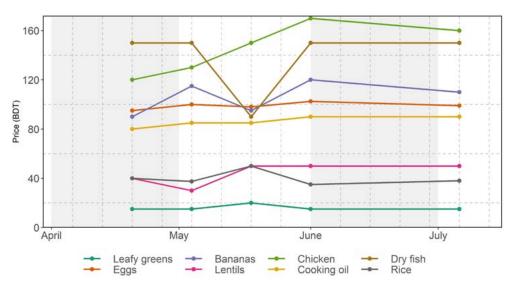

Kev findings

- · Prices of tracked commodities have remained consistent with the previous round. Stocks of all commodities remained available, and all 16 key informants (KIs) reported that all items could be restocked
- Only one KI reported facing restocking issues, including a shortage of carriers to transport supplies in the immediate camp area, commercial agents and wholesalers no longer visiting the camps, and suppliers no longer giving access to credit.
- For all monitored items, KIs continued to report predominantly sourcing them from outside of the camps,
- with a slight increase again in vendors sourcing items from inside the camps as compared to two weeks prior.

 All KIs reported continuing to take safety measures in response to COVID-19. **Use of facemasks remained**the most common measure taken, but as compared to two weeks prior also other measures were more frequently reported.
- Most KIs reported that the number of vendors in their market had stayed the same relative to two weeks prior, but the number of customers and income had continued to decrease over this period. The most common barrier to community access to markets as reported by the KIs continued to be avoidance of markets due to fear of COVID-19, followed by low purchasing power.

Restocking difficulties

of vendors (1 KI) reported facing restocking issues in the 2 weeks prior to data collection, of which the most commonly reported were:*

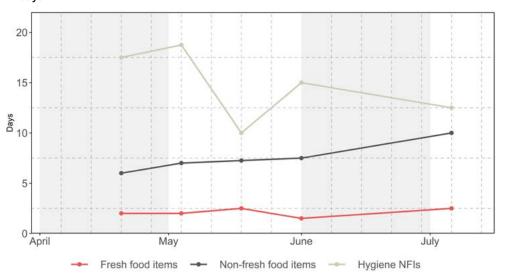

There is a shortage of carriers to transport supplies	100%	•
The commercial agents of the companies and whole salers no longer visit the camps $% \left(1\right) =\left(1\right) \left(1\right)$	100%	~
My supplier no longer gives me access to credit	100%	(

The items reportedly most affected by restocking issues in the past 2 weeks were:

• Eggs

STOCKS OVER TIME

Q Location of suppliers

Main sources of assessed commodities in the 2 weeks prior to data collection, by % of vendors:

Fresh food items1

23% Inside the camp77% Outside the camp

14% Inside the camp86% Outside the camp

Hygiene NFIs³

12% Inside the camp88% Outside the camp

Reselling assistance items

0% of vendors reported reselling assistance items in the 2 weeks prior to data collection.

^{*} Values do not add up to 100% as traders were allowed to select multiple options.

^{1.} Fresh food items: leafy greens, bananas, eggs and chicken 2. Non-fresh food items: rice, lentils, cooking oil and dry fish

^{3.} Hygiene NFIs: soap and washing powder

COVID-19 market impacts

% of vendors reporting taking measures to prevent the spread of COVID-19 in the 2 weeks prior to data collection:*

Use of facemasks	94%	•	
Providing handwashing facilities for customers	81%	A	
Social distancing in queues	81%	A	
Use of gloves	75%	A	
Use of antibacterial gel	56%	A	
Limiting the number of customers at a time	12%	A	
Implementing a barrier through which to take orders	6%	A	《 →
Priority care for older adults	0%	•	\
None	0%	•	

|''''| Community barriers

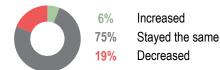

Reported perceptions of barriers faced by the community due to COVID-19 in the 2 weeks prior to data collection, by % of vendors:*

Avoiding markets due to fear of COVID-19	81%	•	
Community members have no cash / low purchasing power	50%	▼	
Fear of checkpoints	38%	A	
Challenges due to restricted opening hours	31%	A	
Avoiding markets due to increased military / police presence	19%	\blacksquare	
Avoiding markets due to aggressive / hoarding behaviours taking place in markets	12%	A	
Long waiting times / long queues at markets	0%	•	
Community members do not have proper authorization / permission for movement	0%	•	← →
No issues	0%	•	\langle

- ▲ indicates an increase of more than 5 percentage points relative to the previous round
- ▶ indicates no change of more or less than 5 percentage points relative to previous round
- ▼ indicates a decrease of more than 5 percentage points relative to the previous round

Vendor dynamics

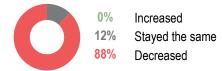

% of vendors reporting a change in the number of vendors in the 2 weeks prior to data collection:

% of vendors reporting a change in the number of customers in the 2 weeks prior to data collection:

% of vendors reporting a change in income in the 2 weeks prior to data collection:

% of vendors reporting witnessing stockpiling behaviour by customers in the 2 weeks prior to data collection:

Security threats

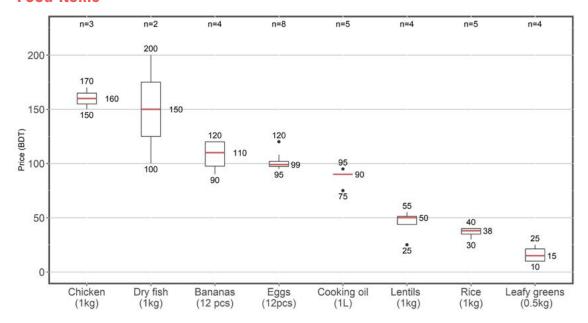

% of vendors reporting witnessing security incidents in the 2 weeks prior to data collection:*

No security problems	94%	>	
Theft of items during storage	6%	>	《
Theft of cash	0%	>	←
Theft of items in business hours	0%	>	
Armed robbery	0%	>	
Forced closure of shop or market by authorities	0%	•	<

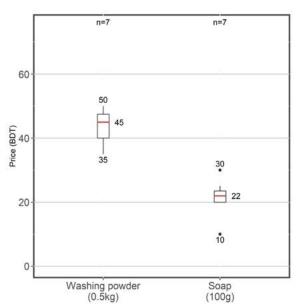

^{*} Values do not add up to 100% as traders were allowed to select multiple options.

METHODOLOGY

The aim of the COVID-19 MMI is to better understand market dynamics and changes in the prices of goods in response to the COVID-19 outbreak and associated social control measures in Bangladesh.

Coverage is determined by the extent of REACH's key informant (KI) network of market vendors. All KIs are vendors who are selling directly to consumers. As the initiative is currently being built up, coverage will likely be expanded in future data collection rounds as the KI network is expanded. In this round, market coverage included 16 vendors across Kutupalong-Balukhali Expansion (KBE) site, (not inclusive of camps 14, 15, or 16). To the extent possible, the same vendors are re-contacted in every round of data collection.

Data is collected by REACH field staff remotely through structured phone interviews with KIs. REACH compiles and cleans all data in line with internal standard operating procedures. The data collection tool is published alongside the dataset on a biweekly basis and disseminated to the humanitarian community. When a comparison with previous rounds is made, it refers to the data collection happening 2 weeks prior.

Challenges and Limitations

- All data is only indicative for the time frame within which it was collected. Prices may vary between data collection rounds.
- The MMI data collection tool requests the cheapest available type of each item to be recorded, as
 availability varies across vendors. Therefore, price comparisons across vendors may be based on slightly
 varying products, and as data collection took place remotely, it is not possible to verify this.
- Standardising unit sizes of certain items (e.g. bananas) may be difficult as many traders sell commodities by volume or weight rather than number of items. This may create a measurement error.
- With current coverage, data is mostly collected from main markets, which may not be representative of smaller markets.
- As the MMI continues to expand and is extended to additional locations, the reported changes in the overall median prices may be driven by shifts in coverage rather than actual price changes.

About REACH's COVID-19 response

As an initiative deployed in many vulnerable and crisis-affected countries, REACH is deeply concerned by the devastating impact the COVID-19 pandemic may have on the millions of affected people we seek to serve. REACH is currently working with Cash Working Groups and partners to scale up its programming in response to this pandemic, with the goal of identifying practical ways to inform humanitarian responses in the countries where we operate. COVID-19-relevant market monitoring and market assessments are a key area where REACH aims to leverage its existing expertise to help humanitarian actors understand the impact of changing restrictions on markets and trade. Updates regarding REACH's response to COVID-19 can be found in a devoted thread on the REACH website. Contact geneva@impact-initiatives.org for further information.
