This profile provides an overview of water, sanitation and hygiene (WASH) infrastructure within Jadimura in Teknaf, Cox's Bazar. Primary data for this round was collected between 11 March - 2 April 2018. Findings should be considered indicative only.

Site Overview

# of individuals:	25274
# of households:	5700
# of shelters:	808
# of individuals per shelter:	31

Key WASH Infrastructure

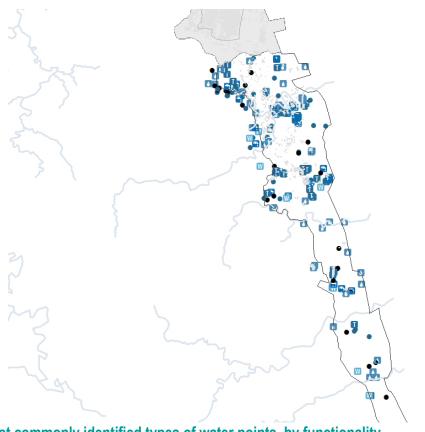

# of latrines	678
(% functional):	(87%)
% of safe latrines ² :	72
# of handpumps	57
(% functional):	(58%)
# of washrooms:	489

Location Map

Access to Water

Water Source

Water Tank Water Tap

Tube Well

Three most commonly identified types of water points, by functionality

27%	Handpump/tube well	58%	42%
24%	Water tank	73%	27%
22%	Tapstand	87%	13%

Key sectoral achievements

	Target	Current Round	Achievement
# of people per functional handpump	max. 250 ³	443	
% of shelters with at least 1 functional handpump within 200m ⁴	100%	93%	

Targets based on WASH Sector Standards/Indicators for the Rohingya response, Sphere Minimum Standards/Indicators as well as Department of Public Health and Environment (DPHE) Minimum Standards/Indicators • Minimum standard/indicator reached, • 75%-99% minimum standard/indicator reached, •50-74% minimum standard/indicator reached, •Less than 50% of minimum standard/indicator reached

¹ REACH enumerators conducted a full sweep of all sites and camps (as per boundaries defined by ISCG) and used an Open Data Kit (ODK) form to log all key infrastructure observed during this sweep, with further details to be logged for WASH infrastructure. ² Safe refers to fully covered latrines (i.e. a latrine with four walls, a roof and a door) ³ This target is based on standards for the medium and long term (3 months +), for the immediate phase (0-3 months) it is 750 metres and for the medium phase (3-6 months) 500 metres.
