Yemen WASH Needs Tracking System (WANTS)

Al Khukhah District, Al Hodeidah Governorate

The Yemen WASH Cluster launched the WASH Needs Tracking System (WANTS) with the support of REACH to provide high quality WASH needs data and inform more effective WASH programming and planning. The WANTS comprises a set of harmonized monitoring tools which, through partner data collection, provide updated information and analysis on WASH access and needs throughout Yemen.

The cholera household interview tool are household-level WANTS tool used in cholera priority districts¹. The findings below are based on 3 household interviews conducted across 3 communities in Al Khukhah district, Al Hodeidah governorate. Data was collected in October 2022 by Danish Refugee Council (DRC). The type of assessed localities were rural areas. These findings should be interpreted as indicative of the WASH needs in Al Khukhah district.

Demographics²

| 🚏 Health | |
|---|--------|
| Proportion of the population living with a disability | 15% |
| Total internally displaced people (IDP) in district | 53,941 |
| Total population in district | 99,094 |

| 2020 Cholera Severity Score ³ | 1 |
|--|-------|
| Global Acute Malnutrition (GAM) prevalence rate ⁴ | 30.4% |
| | |

Water

| Proportion of households who reported travelling >30min to fetch water | 0/3 |
|--|-----|
| Proportion of households who reported having enough water for drinking, cooking, bathing and washing in the 30 days prior to data collection | 0/3 |
| Proportion of households who reported treating their drinking water | 1/3 |
| | |

Proportion of households reported using each type of main drinking water source in the 30 days prior to data collection:

| Water Trucking (Unimproved) | 2/3 | |
|---------------------------------|-----|--|
| Piped water connected to public | 1/3 | |
| tap (Improved) | | |

2/3 of households were found to rely on unimproved water sources⁵ in the 30 days prior to data collection.

0/3 of households reported having issues related to the smell, taste and/or appearance of their water in the 30 days prior to data collection.

🎲 Hygiene

0/3 of the households reported having soap available at place for handwashing

Proportion of households by main type of main handwashing device used in the 30 days prior to data collection:

3/3

3/3 of households reported having issues accessing soap in the 30 days prior to data collection. Of the households that reported issues, the following issues were reported:

| The market is difficult to reach/too far away | 2/3 | |
|---|-----|--|
| Soap is too expensive | 1/3 | |

Sanitation

Proportion of households reported using each type of main sanitation facility in the 30 days prior to data collection:

| Pit VIP toilet (Improved)6 | 2/3 | |
|----------------------------|-----|--|
| Plastic bag(Unimproved) | 1/3 | |

2/3 of households reported sharing their sanitation facility with at least one other family in the 30 days prior to data collection.

Participating partners:

REFUGEE

1) Districts pioritized by the Yemen WASH Cluster for cholera intervention due to cholera incidence and clustering of cases, including high and/or sudden increases in cases. 2) All demographic information is based on UNOCHA 2022 Yemen Population projections. 3) Cholera severity scores based on Suspected Cholera Incidence Rate per 10,000 people. Reported by WHO for 2021 Humanitarian Needer Overview. Cholera Severity score is on a scale of 1 to 5 with 5 being the most severe. 4) Combined GAM prevalence, % children 6-59 months with MUAC 125mm or less and/or WFH Z-score -2 or less. Based on <u>Yemen Nutrition Cluster Achievements Analysis 2020-2022</u>. 5) Improved drinking water source is as a source that, by nature of its construction, adequately protects the water from outside contamination, in particular from faecal matter. 6) Pit VIP toilet is a ventilated improved pit latrine, latrine that has a pipe that allows for ventilation to reduce odour and flies
