#### 2. Rationale

#### 2.1 Background

The sudden escalation of conflict that started in Ukraine on the 24<sup>th</sup> of February 2022 has led to an unprecedented level of need among conflict-affected populations, leading to millions being displaced across and within Ukraine's borders. As of 16<sup>th</sup> of March, the International Organization for Migration (IOM) estimates almost 6.5 million<sup>3</sup> IDPs within Ukraine. Due to the ongoing and evolving military operations targeting the north, south and east of Ukraine, more people are expected to be displaced in the near future.

In this highly challenging and dynamic context, gaps emerge in the capacity of government providers, humanitarian actors, and Civil Society Organizations (CSOs) to maintain a complete picture of IDP needs, movements and location. The West of Ukraine is the region that received the most IDPs since the start of the escalation. As such, the information gaps on collective sites in the region in the region are particularly acute. The constant displacement of families and fluidity of IDP movements has been a significant challenge in acquiring timely and accurate data on the numbers, locations and need of IDPs across Ukraine, limiting the effectiveness of humanitarian assistance planning and implementation.

#### 2.2 Intended impact

In order to address these gaps, REACH, through the CCCM cluster and in partnership with UNHCR, will be providing humanitarian actors with the required information to meet the basic needs of IDPs in Ukraine in a timely and effective manner. Through its IDP collective site monitoring project, REACH will inform the CCCM cluster of ongoing displacement through regular updates, specifically on the situation in the collective sites regarding: the number and profiles of IDPs staying in collective sites, their type and capacity of, movement intentions, priority needs of IDPs, as well as access to services. Further, REACH will support the harmonization of data collection methodologies for displacement monitoring to collective sites in Ukraine. Data collection will be a joint exercise, under the coordination of the CCCM cluster, with information collected contributing to the wider CCCM displacement tracking efforts.

<sup>&</sup>lt;sup>3</sup> IOM, Ukraine Internal Displacement Report – General Population Survey 16 March 2022.

### 3. Methodology

#### 3.1 Methodology overview

At the end of May 2022, the CCCM cluster, with support of REACH, UNHCR, IOM, ACTED, NRC and other partners, mapped 5,670 sites across Ukraine. To support Master list mapping and receive basic information on the site level, REACH will support the CCCM Cluster to develop one harmonized tool, that would be used by partners for site monitoring. Besides, effective coordination/ info sharing will allow to maintain and update a database on the situation in each sites and limit the number of assessments / duplicate questions that individual site managers are required to participate to / answer

Following the baseline mapping, monthly data collection cycles will be initiated. Site monitoring consists of one monthly recurring data collection cycle to provide a comprehensive overview on IDP collective sites in accessible areas in Ukraine The CSM questionnaire is multisectoral and aims at informing a wide range of partners with basic information on key sectoral indicators.

Key informant interviews with site administration officials will be conducted through REACH enumerators, with the support of ACTED, NRC, IOM, UNHCR and other CCCM partners. Both remote and face-to-face data collection methods will be applied depending on the type of the site and the context.

Questionnaire for site monitoring was developed in partnership with UNHCR, IOM, ACTED, NRC and Clusters. A wide number of sectoral indicators in questionnaire will allow partners to target any future assessments to very specific programmatic questions. Partners will be able to select sites for monitoring from the Master List, while REACH will monitor sites/ oblasts, that are without partners presence.

#### 3.2 Population of interest

The population of interest are IDPs in locations where multiple households congregate (collective sites) in accessible areas of Ukraine. This includes persons that have been displaced for the first time, have been displaced multiple times, Accessibility is determined whether REACH or partners enumerators are able to conduct the tasks necessary for the methodologies outlined below and may be limited by factors such as permissions from relevant actors in the area, security considerations, and time constraints. Accessibility may change over the different rounds depending on the nature of ongoing conflict in Ukraine.

#### Secondary data review

Local authorities (National and Hromada level):

- Population and demographic data
- Registration of IDPs

Department for Civil Protection:

Registration of IDPs households seeking social support

National IDP collective sites capacity and presence mapping (office of the President)

REACH, Humanitarian Situation Monitoring, Ukraine, May 2022

REACH, Secondary data review of displacement flows in Ukraine

IOM, Ukraine Internal Displacement Report - General Population Survey - Round 5 (17 - 23 May 2022).

#### 3.1 Primary Data Collection

At the end of May 2022, the CCCM cluster, with support of REACH, UNHCR, IOM, ACTED, NRC and other partners, mapped 5,670 sites across Ukraine. Following the baseline mapping, monthly data collection cycles were initiated.

Primary data collection conducted by REACH and partner enumerators employs a Key Informant (KI) methodology, with key informant interviews (KIIs) conducted at the collective site level. Using a purposive sampling method of sites available in Master List, Data is collected with KIs who have sector-specific knowledge of the needs and services in the collective sites, with the aim of providing all required questions in the tool. KIs should be identified using the existing networks of the CCCM cluster, REACH and other partners. KIs must be over the age of 18 and consent to being contacted and interviewed.

When it comes to Information management and better knowledge of the site itself, Collective Centre Manager (Focal Point) are the highest on the grid of KI profiles. They are the one who manage this information about the site and its residents.

Priority is to be given to the quality of Kls, i.e. the relevance of their profile and reliability of the information they provide. Selection of Kl is essential and will affect the quality of data collected. In instances where there is not a clear official focal point responsible for the site, all Kls should meet the following criteria:

- Be very knowledgeable about IDP Collective Sites
- Be able to provide accurate, up-to-date site-level information in the settlement that they represent
- Currently live and/or work in the settlement/sites they represent
- Be over the age of 18

Two data collection approaches will be considered, the default being face to face. Telephone interviews will be reserved for situations or areas that are not accessible.

Partners will be trained by REACH staff following standard guidelines and training of enumerators. Routine field debriefs will take place between the REACH Assessment Team, Field Managers and partners overseeing each area. These provide a regular feedback channel to express challenges faced at field level, including enumerator concerns about KI understanding of questions, KI ability to answer questions accurately, collective site access constraints, changes in KIs, etc. Refresher training will be conducted whenever the tolls are updated or new partners are joining, and changes will be piloted such that enumerators can provide feedback.

#### 3.2 Data Processing & Analysis

The KOBO form will be deployed on UNHCR KOBO server. Data cleaning will be performed daily and include checking for duplicates, time-checks, review of outliers, and all unstructured responses including enumerator comments and content of "Other, Specify" variables. Data checking and cleaning procedures will adhere to the IMPACT Global Guidance on data checking and processing. Logical checks will be performed in accordance with the Data Analysis Plan (DAP). The cleaning process will be conducted in a semi-automated manner where flags raised by the R-script will be reviewed by the responsible Database Officer and if needed sent for clarification with the field team or respective partner focal point. After this review, all the changes will be written into the Value Change Log and applied to the raw dataset.

### 4 Key ethical considerations and related risks

\*\*For detailed guidance on how to complete this section, see also Step 5 of the IMPACT Research Design Guidelines\*\*

The proposed research design meets / does not meet the following criteria:

| The proposed research design | Yes/ No | Details if no (including mitigation) |
|------------------------------|---------|--------------------------------------|
|                              |         |                                      |

| Has been coordinated with relevant stakeholders to <b>avoid</b> unnecessary duplication of data collection efforts?  | Yes |   |
|--|-----|---|
| Respects respondents, their rights and dignity (specifically by: seeking informed consent, designing length of survey/ discussion while being considerate of participants' time, ensuring accurate reporting of information provided)? | Yes |   |
| Does not <b>expose data collectors to any risks as a direct result</b> of participation in data collection?  | Yes |   |
| Does not expose respondents / their communities to any risks as a direct result of participation in data collection?   | Yes |   |
| Does not involve collecting information on specific topics which may be stressful and/ or re-traumatising for research participants (both respondents and data collectors)?  | Yes |   |
| Does not involve <b>data collection with minors</b> i.e. anyone less than 18 years old?  | Yes |   |
| Does not involve data collection with other vulnerable groups e.g. persons with disabilities, victims/ survivors of protection incidents, etc.?  | No  | We collect data on the presence of vulnerable and marginalized groups such as LGBTQI+ and Roma in collective sites. This was included on the explicit request of the Protection Cluster.  This data will only be shared with the Protection Cluster and not made public |
|  |     | via the dashboard and factsheets. Data will be stored on UNHCR's server with access limitations.  |
| Follows IMPACT SOPs for management of <b>personally</b> identifiable information?  | Yes |   |

# 5. Roles and responsibilities

Table 3: Description of roles and responsibilities

| Task Description                     | Responsible                  | Accountable         | Consulted      | Informed              |
|--------------------------------------|------------------------------|---------------------|----------------|-----------------------|
| Research design                      | Senior Assessment<br>Officer | Research<br>Manager | HQ RDD         | CCCM cluster          |
| Supervising data collection          | Field Manager                | Research<br>Manager | Field Officers | Assessment<br>Officer |
| Data processing (checking, cleaning) | Data Officer                 | HQ Data Unit        | HQ Data Unit   | CCCM cluster          |
| Data analysis                        | Data Officer                 | HQ Data Unit        | REACH HQ       | CCCM cluster          |

| Output production       | Senior Assessment<br>Officer | HQ Research Unit    | REACH HQ  | CCCM cluster |
|-------------------------|------------------------------|---------------------|---|--------------|
| Dissemination           | Senior Assessment<br>Officer | Research<br>Manager | Ukraine Country Coordinator, Ukraine Deputy Country Coordinator | CCCM cluster |
| Monitoring & Evaluation | Senior Assessment<br>Officer | Research<br>Manager | NA  | HQ PD unit   |
| Lessons learned         | Senior Assessment<br>Officer | Research<br>Manager | Field Manager,<br>Field Officer                                 | CCCM cluster |

## 6. Data Management Plan

# 7. Monitoring & Evaluation Plan

| IMPACT<br>Objective  | External M&E Indicator  | Internal M&E Indicator  | Focal point                 | Tool   | Will indicator be tracked?   |
|--|---|---|-----------------------------|--|--|
| Objective  |   | # of downloads of x product from Resource Center  | Country<br>request<br>to HQ |  | X Yes  |
