Humanitarian Situation Monitoring (HSM) Round 3
Key District Findings

CONTEXT

Following heightened levels of conflict and political turmoil in 2021, Afghan population has faced the combined impact of economic crisis, natural disasters and Covid 19 in 2022, resulting in a degradation of humanitarian conditions.

The rapidity with which humanitarian needs are evolving calls for analysis at regular intervals to support geographical and sectoral prioritizations within the humanitarian response in Afghanistan. **Humanitarian Situation Monitoring (HSM) seeks to inform the prioritization of emergency needs by monitoring the evolution of vulnerabilities, coping strategies, gaps in basic services and needs of assessed districts.**

METHODOLOGY

The HSM methodology uses **settlements as the unit of analysis**. A structured survey tool was used to interview **key informants (KIs)** - i.e. government workers, religious leaders, teachers, doctors or other community members with significant knowledge of the settlement - about the humanitarian situation in their settlement. **A sampling frame covering all 401 districts in all 34 provinces of**

Afghanistan was used with a minimum coverage of 10% of total settlements in each district. To achieve geographical spread across each district, **at least three key informant interviews (KIIs)** in a number proportionate to the number of settlements, **were conducted in each Basic Service Unit (BSU)**. To determine a BSU - defined as an economic/geographic service unit which relies on the same services (i.e. healthcare clinics and schools) and common public spaces (i.e. markets and roads) - participatory mapping of the settlements and services available was conducted prior to data collection.

This round of HSM data collection, similar to the previous round, **maintained the use of a randomised selection of settlements for the sampling.** Data collection occurred between **30 October 2022 and 23 November 2022**. A **total of 10,443 KIIs** were included in the analysis - **including 644 (6%) female KIIs and 98 interviews (1%)** with persons self-identifying as a person with a disability when presented with the Washington Group Short Set (WGSS) definition of disability. Because of randomized sample selection, interviews with disabled KIs were limited. For more information, refer to the formatted data and analysis. The following findings are to be considered indicative - i.e. not statistically representative.
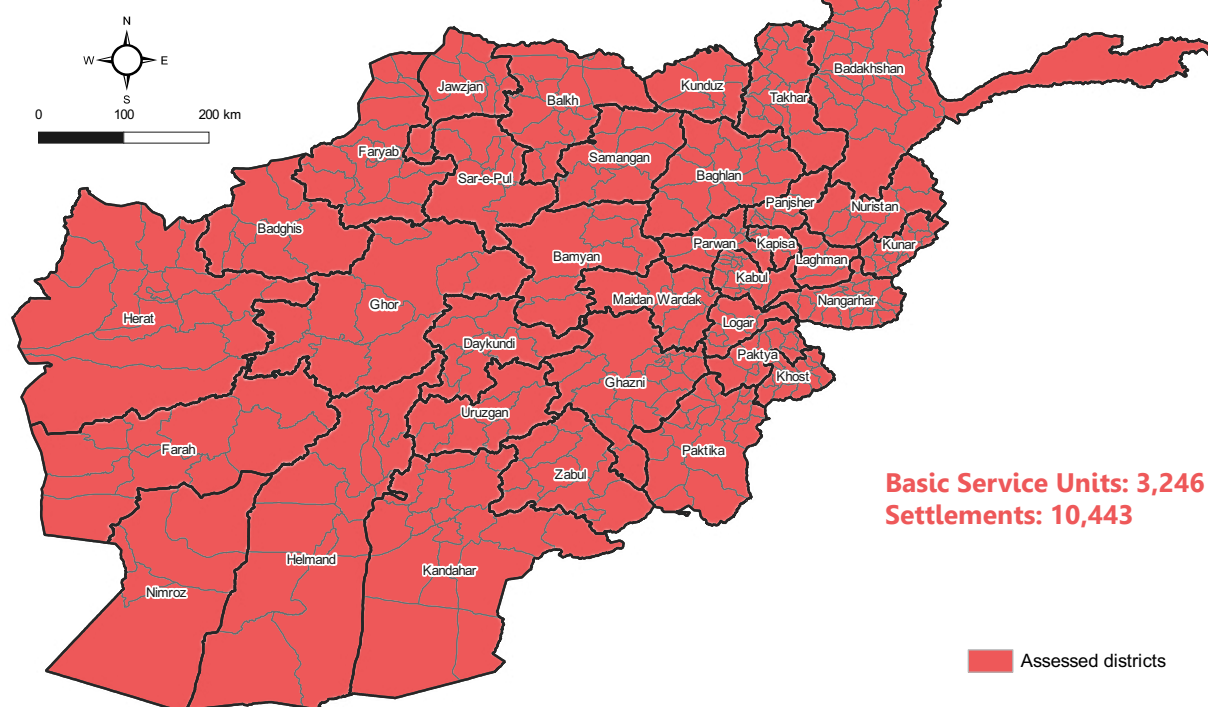

LIMITATIONS

- The HSM methodology relies on KIIs - i.e. it is indicative of key informant perspectives in the assessed settlements and may not reflect the experiences of individual households within the assessed settlements.

- In rare cases, the sample size per district is relatively low; i.e., 6 KIs per district.

NAVIGATION

The following maps and tables from round three of the HSM assessment highlight key indicators from the survey that help to contextualise the economic and livelihoods situation in Afghanistan and to inform understanding of various sectoral needs. **This document is organised according to the table of contents on the following page.**

Each table showing the sector indicator groups listed is further organised alphabetically by region, then alphabetically by province and district within each region.

Humanitarian Situation Monitoring (HSM) Round 3: District Profiles Afghanistan, October - November 2022

FUNDED BY:

FACILITATED BY:

About REACH:
REACH Initiative facilitates the development of information tools and products that enhance the capacity of aid actors to make evidence-based decisions in emergency, recovery and development contexts. The methodologies used by REACH include primary data collection and in-depth analysis, and all activities are conducted through inter-agency aid coordination mechanisms. REACH is a joint initiative of IMPACT Initiatives, ACTED and the United Nations Institute for Training and Research - Operational Satellite Applications Programme (UNITAR-UNOSAT).
