# Hard-to-Reach (HtR) Assessment Round 6

## Key District Findings

## CONTEXT

Endemic poverty and conflict have converged with recent changes in governance, economic shock and natural disasters to generate disparate needs and vulnerabilities within Afghanistan.

The rapidity with which humanitarian needs are evolving calls for analysis at regular intervals to support geographical and sectoral prioritizations within the humanitarian response in Afghanistan. This round of the Hard-to-Reach (HtR) assessment strives to expand upon the HtR objectives of monitoring less accessible areas as well as seeking to inform the prioritisation of emergency needs by monitoring the evolution of venerabilities, coping strategies and gaps in basic services. HtR Round 6 was conducted in as many previously-mapped districts as possible - an increase from 133 districts in the previous to 248 districts in this round - and seeks to complement the household-level Whole of Afghanistan Assessment (WoAA) 2021 by collecting data for aligned indicators at the district level.

## METHODOLOGY

The HtR methodology uses settlements as the unit of analysis. A structured survey tool was used to interview key informants (KIs) - i.e. government workers, religious leaders, teachers, doctors or other community members with significant knowledge of the settlement - about the humanitarian situation in their settlement. A sampling frame covering 248 districts in 31 provinces of Afghanistan was used with a minimum coverage of 10% of total settlements in each district. To achieve geographical spread across each district, at least three key informant interviews (KIIs) in a number proportionate to the number of settlements, were conducted in each Basic Service Unit (BSU). To determine a BSU - defined as an economic/geographic service unit which relies on the same services (i.e. healthcare clinics and schools) and common public spaces (i.e. markets and roads) - participatory mapping of the settlements and services available was conducted prior to data collection. Data collection occurred between 4 August - 17 October 2021. A total of 7,467 KIIs are included in the analysis - including 75 (1%) female KIIs and 1,232 interviews (16.5%) with persons self-identifying as a person with a disability when presented with the Washington Group Short Set (WGSS) definition of disability. For more information, refer to the formatted data and analysis. The following is an **indicative** analysis - i.e. **not statistically representative**.
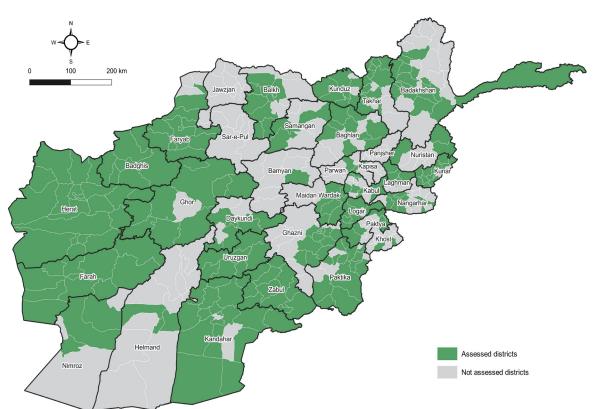

## LIMITATIONS

- Enumerators purposively selected KIs via snowballing. Convenience sampling can favor the most externally accessible KIs (i.e. men, persons without a disability) which can introduce a bias in the data and subsequent analysis. To mitigate this, enumerators sought to interview female KIs and persons with a disability where possible with the principles of do no harm in mind.
- Enumerators purposely selected settlements when there were 3 or more settlements within a BSU to obtain a minimum coverage of 10% of total settlements in each district. This can favor the most externally accessible settlements within BSUs which can then introduce a bias in the data and subsequent analysis.
- The HtR methodology relies on KIIs - i.e. it is indicative of key informant perspectives in the assessed settlements and may not reflect the experiences of individual households within the assessed settlements.
- The number of KIs interviewed in some districts is very low, i.e less than 10 KIs.

## NAVIGATION

The following maps and tables from Round Six of the HtR assessment highlight key indicators from the survey that help to contextualise the economic and livelihoods situation in Afghanistan and to inform understanding of various sectoral needs. This document is organised into district-level tables which are grouped by sector, showing the percentage of KIs reporting key indicators in each district. Each table showing the sector indicator groups listed is further organised alphabetically by region, then alphabetically by province and district within each region.

[1] Protection incidents include: Attacks or harassment, Maiming or killing, Explosive hazards (mines, ERW, PPIEDs), Abduction, recruted into armed groups or detention, Abuse or exploitation, Movement restrictions (not Covid-19 related), Violent destruction of property or farmland, and Eviction from home. KIs were asked if any man, woman, girl, or boy in the assessed settlement experienced any of the these incidents in the three months prior to data collection.

[2] Child labor: KIs were asked if they were aware of any child (under 16 years) working outside the home in the assessed settlement.

[3] Inadequate shelters include emergency shelters, collective centers not intended for living, open space, makeshift, unfinished shelter, or transitional shelter. KI was asked what was the type of shelter that most people in the assessed settlement live in.

[4] Insecure Tenure includes Safayee notebook, verbal rental agreement or none (no tenure agreement at all). KI was asked what type of tenure agreement do most people in the assessed settlement have.

[5] Inadequate energey sources include animal dung or waste (paper, plastic, carton board, etc.), bushes, or local wood, or no source. KI was asked what type of heating source do most people in the assessed settlement rely on.

**About REACH:**
REACH Initiative facilitates the development of information tools and products that enhance the capacity of aid actors to make evidence-based decisions in emergency, recovery and development contexts. The methodologies used by REACH include primary data collection and in-depth analysis, and all activities are conducted through inter-agency aid coordination mechanisms. REACH is a joint initiative of IMPACT Initiatives, ACTED and the United Nations Institute for Training and Research - Operational Satellite Applications Programme (UNITAR-UNOSAT).
