

Background and Methodology

Since August 2017, an estimated 728,306 Rohingya refugees have arrived in Bangladesh's Cox's Bazar district from Myanmar, bringing the total number of refugees residing in Cox's Bazar, to approximately 906,527.¹ The rapid and massive increase of the refugee population, concentrated in the south of the district in Ukhia and Teknaf, has reportedly had an substantial impact on Bangladeshi host communities' food security, economic vulnerability, market access, labour opportunities and environment.

Based on an identified data gap regarding the needs of the host community population after August 2017, a multi-sector needs assessment (MSNA) was conducted under the coordination of ISCG and facilitated by REACH, in partnership with NPM-ACAPS Analysis Hub, and Translators Without Borders in consultation with Union Nirbahi Officers (UNO).² The MSNA targeted the Bangladeshi host community population living in 11 unions across two Upazilas: Ukhia (5 unions) and Teknaf (6 unions). This series of factsheets (14 in total) presents the findings at the Union level (11), the Upazila level (2), and the overall level (1). This factsheet presents the findings for Haldia Palong union. A household survey was conducted using a stratified random sample to produce results for Haldia Palong where 259 households, that comprised of 1,449 individuals, were surveyed. The results are generalisable to 95% confidence level and 6% margin of error for Haldia Palong. Data for this assessment was collected between 11 November - 6 December 2018. The assessment aimed for a 50/50 balance between male and female respondents.

Population³ Households - 9,006 Individuals - 47,461

% of households falling into different food consumption groups based on household Food Consumption Score²⁵

- 21. Three most common problems accessing latrine are shown, and respondents could select more than one option.
- 22. Respondents were asked about solid waste, stagnant water and human faeces in three separate questions.
- 23. Respondents could select more than one option.
- 24. Questions on menstrual hygiene management were only asked to female respondents, by female enumerators.
- 25. The frequency weighted diet diversity score or "Food Consumption Score" is a score calculated using the frequency of consumption of 9 different food groups consumed by a household/individual during the 7 days before data collection. Based on the score they receive, households are categorised into food consumption groups indicating different levels of dietary diversity. Bangladesh-specific thresholds were used to make these calculations. See link: https://www.wfp.org/content/coping-strategies-index-field-methodsmanual-2nd-edition

Average household Coping Strategy Index (CSI) score was 9 (out of a possible 56)²⁶

% of household reporting use of different consumption based coping strategy $^{\rm 27}$

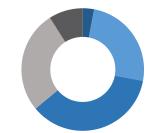

Rely on less preferred and less expensive food	78%

З	Education	15%

92% of households reported feeling secure in their current location.

Perceived attitudes and experiences regarding Rohingya refugees

% of households reporting different levels of interaction with Rohingya refugees

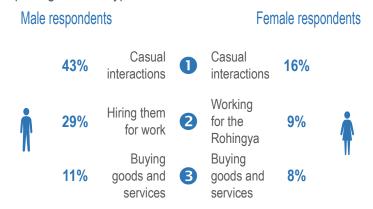

- 26. This assessment used the "reduced" CSI (rCSI), which measures coping behaviours in the 7 days prior to the data collection in response to inadequate food or insufficient money to buy food.
- 27. Respondents where asked on each coping strategy and how many day in the past 7 days did they use this strategy.
- Five most common main sources of income are shown, and respondents could select up to three options.
- 29. This question was asked to female respondents, by female enumerators. Respondents could select more than one option. The results are generalisable to 95% confidence level and 10% margin of error.
- 30.This question was only asked for women/men between the age of 20-25, who reported to be married. Sample size male (n=26) and female (n=83)
- 31. Three most common responses are shown, and respondents could select more than one option. Question was framed as follows: "Are you aware of any groups or committees of community members in your location that are working on any of the following issues?"

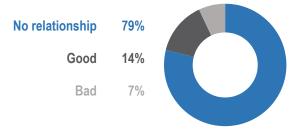

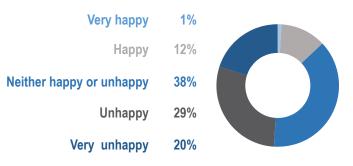

Of households who reported different levels of interaction with Rohingya refugees in the 30 days prior to data collection, % reporting different types of interaction³²

% of households reporting types of relationships with Rohingya refugees

% of households reporting attitudes towards the presence of Rohingya refugees in their communities

Of 49% households who reported being unhappy or very unhappy with the presence of Rohingya refugees in their communities, % who gave different reasons³³

0	Competition for services and utilities	65%
2	Threat of crime	61%
3	Competition for resources	56%

32. Three most common interactions are shown, and respondents could select more than one option.

33. Respondents could select more than one option.

16% of households reported the presence of at-risk children³⁴

Children involved in child labour	10%	
Children at risk of early marriage ³⁵	5%	
Separated children ³⁶	1%	I
Unaccompanied children ³⁶	0%	

% of households reporting the presence of safety risks to boys and girls in their communities³⁷

40% of households reported the presence of children exhibiting at least one behaviour relating to symptoms of distress in the 30 days prior to data collection³⁸

% of households who report the presence of children exhibiting behaviours that relate to symptoms of distress in the 30 days prior to data collection, by type of behaviour³⁹

0	Headaches	23%
2	Nightmares	14%
B	Aggressive or outbursts	11%

- 34. Households were deemed to contain at-risk children if they reported the presence of at least one child that was separated, unaccompanied, at risk of early marriage, or involved in child labour.
- 35. For children at risk of early marriage, respondents were asked if there was anybody in the household under the age of 18 who was married or about to get married.
- 36. For separated and unaccompanied children, respondents were asked if any new members under the age of 18 had joined the household in the past 6 months (excluding births and marriages), and if so what their relationship to the head of household was. If children were related to the head of the household, they were categorised as separated; if not, they were categorised as unaccompanied.
- 37. Three most common safety risk for boys and girls are shown, and respondents could select more than one option.
- 38. Respondents could select more than one option.
- 39. Three most common syptoms of distress are shown. There were 14 other options including "none". 60% reported none. Question was framed as follows: "Within the past 30 days, have any children in this householdexperienced any of the following signs of distress?"; options were read out to respondents; respondents could select more than one option.

Gender-Based Violence

% of women with final say on specified household decisions⁴⁰

Who has a final say on whether or not you should work to earn money?

Husband/partner	45%	
Respondent and husband/partner jointly	26%	
Decision not made/not applicable	18%	
Respondent	9%	
Respondent and someone else jointly	1%	I.
Someone else	0%	

Who has the final say on whether or not to use a method to avoid having children?
