

# Household Emergency Assessment Tool (HEAT) Afghanistan

ERM 10 - September 2020

## Overview

The Household Emergency Assessment Tool (HEAT) is a standardised emergency assessment tool adopted by the Afghanistan Humanitarian Country Team, and includes indicators illustrating demographics and a household's vulnerability in the following sectors: food security, shelter, water, sanitation and hygiene (WASH), education and livelihoods.

The HEAT is used as part of the ECHO funded Emergency Response Mechanism (ERM), to assess the eligibility of conflict and shock-affected communities to one-time multi-purpose cash and WASH assistance. The Danish Refugee Council (DRC) led consortium includes two other implementing partners, the Agency for Technical Cooperation and Development (ACTED) and International Rescue Committee (IRC). The response is also supported by the Danish Committee for Aid to Afghan Refugees (DAACAR) for WASH related assistance. This factsheet summarises key indicators from the HEAT assessments carried out by partners in September 2020.

## Methodology

The primary data for this factsheet was collected by partner organisations within the ERM through household interviews within conflict and shock-affected communities. REACH combined and analysed the collected partner HEAT data in order to present key findings in this factsheet for the purpose of informing future ERM programming and advocacy. The findings are representative of the assessed households and are not to be interpreted as statistically generalisable to the whole population.

### Limitations

All data was collected by ERM partners through their own channels, as such there was not one standardised methodology used. While efforts were made to consolidate the data as much as possible, this should be kept in mind whilst reviewing these findings.

### Exceptions

Due to the impact of the floods that occurred in August, a short version of the HEAT was deployed to rapidly assess shock-affected households. Data from the short tool are not reported in this factsheet.

## Assessment Coverage

Households<sup>1</sup>: 4,333

Individuals: 29,584

Provinces: 23

Total number of households found eligible to receive assistance in September<sup>1</sup>: 4,019

## Provinces Covered

Badakhshan, Badghis, Baghlan, Balkh, Bamyan, Farah, Faryab, Ghazni, Ghor, Helmand, Herat, Jawzjan, Kabul, Kandahar, Kapisa, Khost, Kunduz, Maidan Wardak, Nangarhar, Paktika, Paktya, Parwan, Samangan, Sar-e-pul, and Takhar.

## Household Demographics

Average household size: 6.6

% of households by displacement profile:

% of household members by sex and age:

Female (52%)	Age	Male (48%)
2%	60+	2%
17%	18-59	14%
22%	6-17	21%
11%	0-5	11%

Displaced households

% of displaced households by reason:<sup>2</sup>

Active conflict	87%
Anticipated conflict	26%
Flood	11%

## Vulnerability and Priority Needs

% of households by key vulnerability indicators:<sup>3</sup>

29%	At least one member with a disability <sup>4</sup>
8%	More than 10 household members
67%	Exhibiting health seeking behaviour <sup>5</sup>
84%	Debt greater than 8,000 AFN

Female headed households

Elderly headed households

Child headed households

## Income, Debt and Livelihoods

Reported main source of income since shock:

Small business	4%
Agriculture and livestock	4%
Daily unskilled labour	56%
Daily skilled labour	4%
Other	32%

Reported monthly household debt:

Average reported debt: 27,750 AFN  
Of which, average amount accrued in the 30 days prior to interview: 9,300 AFN

The average debt contracted by the assessed households was 20 times higher than the average income at the time of the assessment.

Average reported monthly income: 1,358 AFN

Most frequently reported reasons for contracted debt:<sup>2,6</sup>

The average household income divided by the average household size results in 204 AFN per person, per month

Food	72%
Healthcare	10%
Rent	10%

# Household Emergency Assessment Tool (HEAT) Afghanistan

ERM 10 - September 2020

## WASH

% of households using an unimproved water source<sup>7</sup> as their main source for domestic use at the time of the interview:

Using unimproved water source for domestic use

Households reporting not having enough water for drinking, cooking or bathing

88% of households reported their main water source to be further than 500 metres away.

29% of households reported using an unimproved latrine type.<sup>8</sup>

## Health

% of households without a functional health facility within 2 hours of their house:

No functional health facility within 2 hours

87% of households reported facing at least one barrier to accessing healthcare. The most frequently reported barriers were:<sup>2</sup>

- 1 72% Cost of medicines
- 2 61% Cost of healthcare
- 3 49% Cost of transport
- 4 14% Insufficient capacity
- 5 12% Distance and travel time

64% of households reported that they had delayed seeking medical care for critical health problems to save money in the 30 days prior to data collection.

## Food Security

% of households by Food Consumption Score (FCS):<sup>9</sup>

- 91% Poor
- 8% Borderline
- 1% Acceptable

% of households by reduced Coping Strategy Index (rCSI) score:<sup>10</sup>

- 88% High
- 11% Medium
- 1% Low

% of households by Livelihood Coping Strategies (LCS) score:<sup>11</sup>

- 14% Emergency
- 50% Crisis
- 36% Stress

## Education

% of school aged children (aged 6 to 17) reported to not be attending formal school:

97% Girls out of school

98% Boys out of school

Of the 100% of households reporting that they had school aged children not attending school, the most frequently reported reasons were:<sup>2,12</sup>

- 1 70% Lack of documentation
- 2 25% Costs
- 3 18% Security concerns
- 4 18% Distance
- 5 8% Work

19% of households reported that they had stopped sending children to school so that they could work for economic gain or productive activities.

## Shelter

% of households by reported shelter type occupied at the time of interview:

House	27%
Tent or makeshift shelter	69%
Open space	2%
Non-residential shelter	1%
Unfinished building	1%

34% of households reported renting the shelter they occupied at the time of interview.

% of households by most frequently reported concerns related to the shelter occupied:

- 1 32% Eviction
- 2 30% Size
- 3 10% Damaged building
- 4 9% Landlord problems
- 5 7% Safety

On average, households reported 8 persons to be living in the shelter they occupied at the time of interview.

## NFI Non Food Items (NFIs)

Of the 100% of households reported being in need of at least one key NFI, the reported items needed were:<sup>2</sup>

- 93% Sleeping mats or mattresses
- 95% Plastic tarpaulin
- 93% Cooking pots
- 91% Stainless steel cups
- 85% Water storage containers
- 93% Gas cylinders
- 90% Clothing
- 72% Female sanitary items
- 6% Mobile or assistive device

ERM 10 - September 2020

## Protection

% of households reporting a member has experienced a protection incident or is at risk:

At least one member experienced a protection incident or is at risk

% of households reporting a male member has experienced the following protection incidents or is at risk:<sup>2</sup>

- 13% Physical violence or harassment
- 4% Denial of resources or access to services
- 1% Marriage earlier than otherwise planned
- 1% Drug addiction or exposure to illegal drug use

% of households reporting a female member has experienced the following protection incidents or is at risk:<sup>2</sup>

- 11% Physical violence or harassment
- 5% Denial of resources or access to services
- 5% Marriage earlier than otherwise planned
- 1% Drug addiction or exposure to illegal drug use

% of households reporting a child member has experienced the following protection incidents or is at risk:<sup>2</sup>

- 10% Physical violence or harassment
- 5% Denial of resources or access to services
- 1% Marriage earlier than otherwise planned
- 1% Drug addiction or exposure to illegal drug use

## Accountability to Affected Populations

17% of households reported having **no access to mobile network communications and tools.**

63% of households reported **preferring to receive assistance in cash.**

% of households reporting preferred way of communicating feedback or complaints:

Call Awaaz <sup>13</sup>	28%
Calling the agency	12%
In person	35%
Through authorities	13%
Community leaders	4%
Other	8%

## Awareness and Impact of COVID-19

% of households reporting being unaware of COVID-19:

Unaware of COVID-19

% of households reporting access to hand washing facilities and/or soap:

- 21% No hand washing facilities available
- 79% No access to soap or hand sanitizer

% of households who witnessed any members of their community being discriminated against as a result of COVID-19:

Witnessed any community member discriminated against

% of households by primary symptoms of COVID-19 that they reported being aware of:<sup>2,14</sup>

Fever	90%
Coughing	92%
Breathing difficulty	79%
Fatigue	46%
Other	2%

% of households by preventative measure to COVID-19 they reported being aware of:<sup>2,14</sup>

Washing hands	95%
Social distancing	75%
Self isolation	63%
Gloves and masks	58%
No face touching	36%

% of households reporting witnessing discrimination due to COVID-19, by group targeted:<sup>2</sup>

3%	People with chronic illness
1%	Returnees
3%	Elders
3%	People with disabilities
2%	Adults (men and/or women)

## End Notes

- The number of households reported here corresponds exclusively to those assessed with the entire HEAT tool. Additional households were assessed with a short-tool September. The findings from the short tool will be analyzed separately in October.
- Respondents could report multiple options. Findings may therefore exceed 100%.
- Vulnerability indicators listed correspond to household characteristics that make up part of the ERM MPCA eligibility criteria.
- Disability is counted as at least one member of the household reported to have a severe disability, based on Washington Group questions, where the individual either 'cannot do at all', or has 'a lot of difficulty doing' any of the following: seeing, hearing, walking, remembering, self care (such as washing or dressing), or communicating. For more information see [here](#).
- Health seeking behaviour is qualified as any household reporting that there has been a household member with a health issue for which they have wanted to seek medical care.
- Most frequently reported reasons for contracted debt from households who reported being in debt.
- Households were asked to report their main source of water for domestic use. Improved water sources include: hand pump/ bore well, piped water, protected spring, or purchased water. Unimproved sources include: dug well, stream/river, kandas, unprotected spring, pond/lake, or other. For more information see [here](#).
- Households were asked to report the type of latrine they had access to. Improved latrine types include family latrine, family VIP latrine. Unimproved latrine types include community latrine, no latrine, or other. For more information see [here](#).
- The Food Consumption Score (FCS) is calculated using the frequency of a household's consumption of different food groups during the 7 days before the survey. For more information see [here](#).
- The Reduced Coping Strategies Index (rCSI) is based on the rate that households with food consumption problems relied on negative coping strategies during the 7 days before the survey. For more information see [here](#).
- The Livelihoods Coping Strategy Index (LCSI) score is a measure of reliance on livelihood-based coping mechanisms to cope with lack of food. For more information see [here](#).
- Data were collected during closure of schools due to COVID-19 which may have affected reporting.
- Awaaz, humanitarian helpline connecting Afghans (IDPs, returnees) and refugees affected by conflict and natural disaster with information on assistance modalities.
- Question asked exclusively to those respondents who reported being aware of COVID-19.
