### Introduction

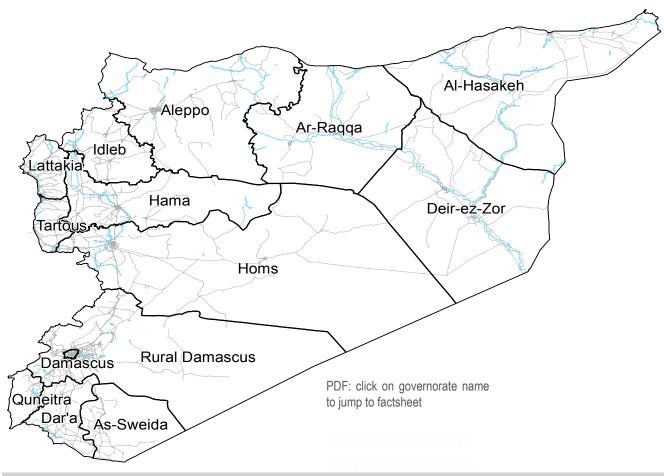

The Area of Origin (AoO) project is a monthly data collection exercise which aims to gather multi-sector information about needs and the humanitarian situation inside Syria. In October 2015, the AoO network was utilised to gather information about the preparedness of communities in Syria for the upcoming winter. These factsheets present the findings of this assessment, showing the situation last winter and the current needs and capacity.

### **Country Overview**

Last winter, assistance across the country was limited. In particular, in all sub-districts assessed in Deir ez Zor governorate no one received any form of winter assistance. Similarly, in all sub-districts assessed in Homs governorate no non-IDPs received any form of assistance, and in Damascus, very few did. Both IDPs and non-IDPs were more likely to receive winter preparation assistance than winter cash assistance.

Fuel was received in 48 villages of 302 assessed. This is concerning as fuel was the most commonly reported priority need last year (246 of 302 villages assessed). Similarly, stoves / heaters were reported as a priority need in 182 villages, and received in just 36. Winter clothes and blankets were priority needs in over 200 villages (and received in 149 villages and 122 villages respectively).

For the coming winter the most commonly reported priority needs across the country are fuel (263 villages of 302 assessed), winter clothing (244), blankets (219) and stoves/ heaters (204). Collective storage capacity is particularly limited in Ar Raqqa, Deir ez Zor, Homs, Lattakia and Quneitra governorates, and prices of winterisation items are particularly high in Deir ez Zor, Al Hasakeh, Ar Raqqa and As Sweida.

### **Methodology and limitations**

These findings are based on data collected remotely (by Refugee Participants in Jordan, KRI and Lebanon, and REACH enumerators in Turkey) from Key Informants (KIs) residing in Syria, gathered at the community level – and can thus only be considered as indicative of the overall situation in the sub-district.

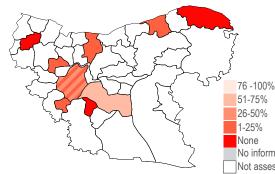

A key challenge is identification of KIs from all sub-districts with the required community level knowledge. It should also be noted that information relies on KI perception of the sector-specific situation. For a full description of the methodology, please see the AoO terms of reference, available on the <u>REACH Resource Centre here.</u>

#### Priority needs last winter (\*CL: 2/3) vs items received last winter (\*CL: 2/3)

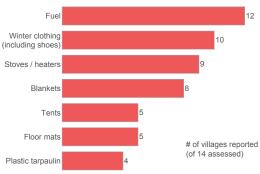

**Current Capacity and Needs** 

Across the governorate, fuel, winter clothing and Current storage capacity for winter items\*\* stoves / heaters are priority needs for the coming winter; these items were not commonly received last year. Stoves are unavailable in 4 villages assessed in Nabul, Jarablus, Banan and Ma'btali sub-districts, and heaters are unavailable in 5 villages assessed in A'zaz, Ain Al Arab, Jarablus, Banan and Ma'btali sub-districts. Five of the 14 villages assessed have no storage capacity for winter items. Tents, heaters, blankets and plastic tarpaulins are expensive compared to average prices across the country (25,814 SYP, 11,329 SYP, 2,950 SYP and 1,710 SYP respectively).

### **Current Capacity and Needs**

Across the governorate, fuel, blankets and winter Current storage capacity for winter items\*\* clothing are priority needs for the coming winter; (\*CL: 2/3) items were received in just one village last year. This is compounded by the lack of storage capacity for winter items in all but one village assessed. Blankets are available in the majority of villages assessed, though they are significantly more expensive than the country average (2,950 SYP). Further tents, heaters, stoves and plastic tarpaulins are also more expensive than average prices across the country.
