# **Settlement and Protection Profiling**

Camp 22 Teknaf, Cox's Bazar, Bangladesh

July 2019 and November 2019 comparison

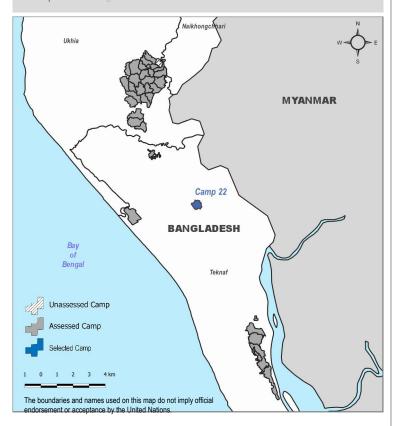

Round 6
November 2019

#### **Background and methodology**

Since August 2017, an estimated 744,400 Rohingya refugees have fled from Myanmar into Cox's Bazar, Bangladesh, increasing the total number to around 914,998.¹ The majority are reliant on humanitarian assistance, services, and resources including shelter, food, clean water, and sanitation. Information on Rohingya households, particularly in relation to protection and access to services, is in need of regular updating due to the variation in service provision across settlements, challenges presented by the monsoon and cyclone seasons, and the evolving social and contextual dynamics within each settlement. Therefore, REACH in partnership with UNHCR conducted periodic Settlement and Protection Profiling in order to support evidence-based monitoring and analysis of cross-cutting protection issues in Rohingya refugee settlements.

The sixth round of SPP was conducted in 33 out of 34 refugee camps and settlements in Cox's Bazar District from 28 October - 28 November, 2019. Surveys were conducted with households selected through simple random sampling of shelter footprints. Translators Without Borders supported with translating the form into Rohingya. Results of this assessment are generalisable to the population of each camp with a 95% confidence level and 10% margin of error. This factsheet presents an analysis of data collected in Camp 22, where 102 households were surveyed.

Where relevent, findings are compared to those of SPP Round 5 which took place from 25 June - 5 August, 2019. November 2019 data is presented in dark blue, and July 2019 data is presented in light blue.

<sup>2.</sup> UNHCR, Bangladesh: UNHCR Camp Settlement and Protection Profiling - Round 4, December 2018. https://data2.unhcr.org/en/documents/details/71873

<sup>3.</sup> For definitions of key terms relating to special needs and disability, refer to UNHCR "Guidance on the Use of Standardized Specific Needs Codes" https://bit.ly/2GnJE0h.

<sup>4.</sup> For this round of data collection, disability was measured at the household level using the Washington Group Short Set of questions on disability. According to this methodology, 'disability' is determined as anyone in the household having at least 'a lot of difficulty' following six domains: walking, seeing, hearing, cognition, self-care, and communication.

<sup>5.</sup> Respondents could give up to three answers.
