Introduction

The IDP Hosting Site Baseline Assessment aims to support targeting and response planning by humanitarian stakeholders, including authorities, UN agencies, and local and international non-governmental organisations (NGOs). It provides a baseline of key multi-sectoral indicators across IDP hosting sites in 20 governorates, based on data collected through interviews with key informants in each site. This baseline assessment will serve to inform the site management support that will be offered to local authorities and humanitarian actors in charge of IDP hosting sites management, as well as the support that will be offered to IDPs to establish self-governance, community participation, and communication processes within IDP hosting sites.

The IDP Hosting Site Baseline Assessment was organised and supported by the Shelter / NFI / CCCM Cluster coordination team and cluster partners. The data collection for the baseline assessment was carried out by the International Organisation for Migration (IOM) in 12 governorates, the office of the United Nations High Commissioner for Refugees (UNHCR) in 4 governorates and ADO and SRA in the 4 remaining governorates.

Updates to this baseline assessment will be carried out to assess newly established sites. Monitoring of the sites identified through the baseline and subsequent updates will also be carried out on a regular basis. The information generated over time through monitoring will provide an indication of structural and sectoral changes in the conditions of the sites.

For the purposes of this assessment, REACH supported the Shelter / NFI / CCCM Cluster in data analysis and output production. The core outputs for this assessment include:

1. Summary report: Overview of key indicators and comparative analysis of sites to identify those in most urgent need;
2. Site Profiles: Produced for each site with relevant sectoral information;
3. Site Maps: Maps showing site location and characteristics.

This report presents findings from four governorates - Al Hudaydah, Al Mahwit, Hajjah, and Sana'a - based on data collected in July 2018 by IOM during the fourth phase of the baseline assessment. The first three phases of data collection took place in sixteen governorates, in June 2017, August 2017, and September/October 2017.

Methodology

The assessment was conducted in four stages across 20 governorates, in IDP hosting sites of five or more IDP households, where assistance and protection services could be delivered collectively. To identify sites, the Task Force for Population Movement (TFPM) Area Assessments¹ and a cluster site list have been used. Enumerators visited each site included on the cluster site list, and included the site in the assessment if it was found to meet the criteria of hosting five or more IDP families. The assessment covered both rural and urban settings, and aimed to assess every IDP hosting site in Yemen. However, as the status of these sites is fluid, findings refer to identified sites, with new sites being added into or removed from later data collection rounds.

Data was collected through interviews with one to five key informants in each site. Key informants included site managers, members of site committees, sheikhs, imams, community leaders, or in the absence of any formal leaders – randomly chosen IDP households, who responded on behalf of all households in the site. Consequently, findings reflect the informed perspectives of these key informants and should be

1. [The Task Force for Population Movement \(TFPM\)](#), co-led by IOM and UNHCR is a Technical Working Group of the Yemen Protection Cluster. The TFPM implements an information management tool that gathers data on the status and location of displaced persons across Yemen.

Definitions

For the purpose of data collection, the Yemen Shelter / NFI / CCCM Cluster defines each concentration of displaced population according to the following categories:

- **Location:** a populated place is the smallest geographical division: a neighbourhood in an urban area or a village in rural area.
- **Site:** a location inhabited by five or more households regardless of its accommodation and shelter type. In cases of multiple housing units hosting five or more households each, having the same shelter type and sharing one basic service unit, a single data collection form is applied. Basic service units include latrines, water points, or cooking facilities.
- **Individual settlement:** a population concentration hosting less than five households within one location (see above). Individual settlements were not included in this exercise.

Displacement sites are divided into two categories:

- **Collective Centre:** a displacement site in a pre-existing physical structure, either public/communal (e.g. public buildings, schools) or private buildings (e.g. factories, private houses) inhabited by five or more IDP households.
- **Spontaneous Settlement:** groups of tented or other types of housing units inhabited by five or more IDP households established by the IDPs themselves, or by non-experienced actors on land they have no legal claim to. The IDPs intend to stay in this settlement for an extended period of time.

This report uses the following definitions for type and status of shelters present in displacement sites:

- **Makeshift shelter:** typically built from waste and temporary materials (tarpaulins, cardboard, blankets, metal sheeting, tarps, etc.).
- **Emergency shelter:** a portable shelter with a cover and a structure;
- **Finished building:** a building which is completed (with walls and roof) and composite of all building components (windows, doors, plumbing, etc.).
- **Unfinished building:** a building which has more than its frame, but is still missing elements (i.e. doors, windows, lighting, plumbing, walls, etc.).
- **Skeleton:** a building which has a solid frame (concrete, steel, etc.) but no other elements.
- **Open air:** no structure present.

Other definitions:

- **Unhygienic facilities:** facilities that are not sanitary and do not respect minimum standards of cleanliness or that may cause disease.
- **Functioning facilities:** facilities that continue to fulfil the purpose for which they were constructed or provided.
- **Private (site, services or facilities):** site belonging to, controlled by or for the use of one particular person, group of people, or commercial company only and not owned by or connected with the government. Services or facilities provided by a particular person, group of people, or commercial company.
- **Public (site, services or facilities):** site belonging to, controlled by, or for the use of the entire population rather than a particular individual/group. Services or facilities provided by the government.

Summary

The findings presented below are indicative of all assessed sites in four governorates (Al Hudaydah, Al Mahwit, Hajjah, Sana'a). Percentage figures are calculated on the basis of all sites assessed across the four governorates, unless stated otherwise.

Comparative analysis of needs severity, per site

Al Hudaydah, Al Mahwit, Hajjah, Sana'a

The comparative analysis of severity of needs in IDP Hosting Sites aims to support humanitarian actors in prioritisation of sites according to the classification.

Severity of needs should be compared only between sites for a given sector and not between sectors. The method of scoring is presented in the scoring matrix (Annex 1).

The overview of needs severity is presented on maps organised by geographic area, followed by the tables with comparative analysis of needs severity per site organised by governorate. For each governorate sites are sorted by district, and within districts they are organised by final priority score.

Detailed information about population, facilities, and needs in each site can be found in the *IDP Hosting Site Baseline Assessment - Site Profiles* factsheet, published as a separate document.
